**Measurement of Ultrashort Electromagnetic Pulses** John M. Dudley, 2008      Ultrashort Electric Pulse Effects in Biology and Medicine Stephen J. Beebe, Ravi Joshi, Karl H. Schoenbach, Shu Xiao, 2021-05-22 This book presents an overview of the current state of research on ultrashort electric field pulses of high intensity and their use in biology and medicine It examines in detail the most recent and exciting advances in how nanosecond and picosecond electric pulse research has grown and expanded into new areas of biology and medicine Further the book specifically focuses on electric pulses in the time domain on intracellular effects as opposed to plasma membrane electroporation and highlights the biological and medical applications of these unique pulse effects Since the authors were initial innovators exploring nanosecond and picosecond pulses their unique perspectives foreshadowed directions the research took expanding into new areas that they continue to investigate today      **Ultrashort Electric Pulse Effects in Biology and Medicine** Stephen J. Beebe, Ravi Joshi, Karl H. Schoenbach, Shu Xiao, 2021 This book presents an overview of the current state of research on ultrashort electric field pulses of high intensity and their use in biology and medicine It examines in detail the most recent and exciting advances in how nanosecond and picosecond electric pulse research has grown and expanded into new areas of biology and medicine Further the book specifically focuses on electric pulses in the time domain on intracellular effects as opposed to plasma membrane electroporation and highlights the biological and medical applications of these unique pulse effects Since the authors were initial innovators exploring nanosecond and picosecond pulses their unique perspectives foreshadowed directions the research took expanding into new areas that they continue to investigate today      **Ultra Short Pulse Electroporative Physics and Technology** , 2004 The project has demonstrated that ultra short high field pulses are a useful tool for study of cellular physiology and a potential therapeutic instrument for malignant cells The research has established that intracellular effects including apoptosis can be induced by the application of short intense but low total energy electric pulses Experiments on human cells have produced convincing evidence that these applied fields nondestructively alter subcellular processes and can be investigated using biophotonic studies for imaging of morphological and functional changes at subcellular levels The results suggest a promising pathway toward achieving the ultimate goal of selectively disabling tumor or other undesirable cells In addition to demonstrating that ultrashort pulses have potentially important applications for cell and cancer biology investigations and for understanding the application of pulsed fields to living matter these results demonstrate that an effective and productive multidisciplinary collaboration between science engineering medicine and biology has been created nanosecond high field electric pulse electrnpenturbaUon electroporation pulse Induced phospholipid translocation nanoelectropuls%      *Ultrashort Pulses* Mikhail N. Polyanskiy, 2012      **Requisiton Manual for Electromagnetic Pulse (EMP) Program** United States. Federal Emergency Management Agency, 1985      *SLIM, Short-pulse Technology for High Gradient Induction Accelerators* , 2008 A novel short pulse concept SLIM suited to a new

generation of a high gradient induction particle accelerators is described herein It applies advanced solid state semiconductor technology and modern microfabrication techniques to a coreless induction method of charged particle acceleration first proven on a macro scale in the 1960 s Because this approach avoids use of magnetic materials there is the prospect of such an accelerator working efficiently with accelerating pulses in the nanosecond range and potentially at megahertz pulse rates The principal accelerator section is envisioned as a stack of coreless induction cells the only active element within each being a single extremely fast subnanosecond solid state opening switch a Drift Step Recovery Diode DSRD Each coreless induction cell incorporates an electromagnetic pulse compressor in which inductive energy developed within a transmission line feed structure over a period of tens of nanoseconds is diverted to the acceleration of the passing charge packet for a few nanoseconds by the abrupt opening of the DSRD switch The duration of this accelerating output pulse typically two to four nanoseconds is precisely determined by a microfabricated pulse forming line connected to the cell Because the accelerating pulse is only nanoseconds in duration longitudinal accelerating gradients approaching 100 MeV per meter are believed to be achievable without inciting breakdown Further benefits of this approach are that 1 only a low voltage power supply is required to produce the high accelerating gradient and 2 since the DSRD switch is normally closed voltage stress is limited to a few nanoseconds per period hence the susceptibility to hostile environment conditions such as ionizing radiation mismatch e g in medical applications the peak beam current may be low strong electromagnetic noise levels etc is expected to be minimal Finally we observe the SLIM concept is not limited to linac applications for instance it could be employed to both accelerate the beam and to stabilize the superbunch mode of operation in circular track machines
