Progreb In Allergy Immunology Of Anergy Systemic Lupus Erythematosus:

Immunology of Anergy and Systemic Lupus Erythematosus R. S. Schwartz, 1984 **Systemic Lupus Erythematosus** Josef Smolen, Christoph C. Zielinski, 1987-03-31 More than 140 years ago lupus erythematosus LE was recognized as a disease entity by clinicians working in the field of dermatology which had only recently become an independent medical discipline Soon after cutaneous lupus was first reported it was realized that apart from the skin the disease could involve other organs and thus be systemic in nature The latter observations were first made by MORITZ KAPOSI 1 whose work has attracted renewed attention recently and who succeeded FERDINAND VON HEBRA to the chair of dermatology at the Medical Faculty in Vienna The early description of lupus erythematosus in both its cutaneous and systemic manifestations was thus intimately associated with Vienna and its Medical School The next phase in the study of lupus was characterized by an increase in knowledge of the type and extent of organ involvement The work by OSLER 2 LIBMANN and SACKS 3 and KLEMPERER 4 best represents these advances The increase in clinical knowledge of LE finally led to DUBOIS famous monograph 5 which was published at a time of renewed interest in SLE elicited by the description by HARGRAVES et al 6 of the LE cell phenomenon A more detailed analysis of this finding revealed that the disease was characterized by an abnormal immune response although its pathogenetic implications were still unclear *Systemic Lupus Erythematosus* Peter A. Miescher, 2012-12-06 During the past 50 years systemic lupus erythematosus SLE has been the main subject in the field of immunopathology Each individual discovery was followed by the discovery of a multitude of related immune phenomena This book reflects the present status of our understanding of this protean disease Various animal models clearly show that different gene combinations can lead to the final clinical expression of SLE with HLA class II genes probably responsible for the targeting of the autoimmune response Similarly research on cytokines in SLE patients has shown that SLE is a syndrome depending on different pathways Finally the question of prognosis is discussed Fortunately with every passing decade the prognosis for patients with SLE gets better and better Systemic Lupus Erythematosus Josef S. Smolen, Christoph C. Zielinski, 2012-12-06 More than 140 years ago lupus erythematosus LE was recognized as a disease entity by clinicians working in the field of dermatology which had only recently become an independent medical discipline Soon after cutaneous lupus was first reported it was realized that apart from the skin the disease could involve other organs and thus be systemic in nature The latter observations were first made by MORITZ KAPOSI 1 whose work has attracted renewed attention recently and who succeeded FERDINAND VON HEBRA to the chair of dermatology at the Medical Faculty in Vienna The early description of lupus erythematosus in both its cutaneous and systemic manifestations was thus intimately associated with Vienna and its Medical School The next phase in the study of lupus was characterized by an increase in knowledge of the type and extent of organ involvement The work by OSLER 2 LIBMANN and SACKS 3 and KLEMPERER 4 best represents these advances The increase in clinical knowledge of LE finally led to DUBOIS famous

monograph 5 which was published at a time of renewed interest in SLE elicited by the description by HARGRAVES et al 6 of the LE cell phenomenon A more detailed analysis of this finding revealed that the disease was characterized by an abnormal immune response although its pathogenetic implications were still unclear Case Studies in Immunology: Systemic Lupus Erythematosus Raif Geha, FRED Rosen, 2010-01-01 This book presents case histories that are chosen for two purposes to illustrate in a clinical context essential points about the mechanisms of immunity and to describe and explain some of the immunological problems often seen in the clinic **Advanced Handbook of Systemic Lupus Erythematosus** Laurent Arnaud, Ronald van Vollenhoven, 2017-09-10 This book will provide an introduction to the epidemiology etiology and pathogenesis of the condition while also exploring the classification diagnosis and current and emerging therapies for systemic lupus erythematosus Systemic lupus erythematosus is an autoimmune disease in which the body's immune system mistakenly attacks healthy tissue It can affect the skin joints kidneys brain and other organs The underlying cause of the disease is not fully known and SLE is much more common in women than in men It may occur at any age but most often occurs in people between 10 and 50 years of age This is the second Adis title from Ronald F van Vollenhoven who previously authored *Biologics for the Treatment of Rheumatoid Arthritis* Immunological Aspects of Allergy and Allergic Diseases E. Rajka, 2013-11-11 SPECIFICITY It is a basic assumption that for reasons unknown the constituents of the human body may become antigenic and then the patient produces antibodies against them Some autoantibodies are tissue specific e g haemolytic anaemia pernicious anaemia whereas others are non tissue specific e g systemic lupus erythematosus To prove autoimmunity in the strict sense is not an easy task In any event the outcome of antigenic stimulation whether antibody formation or tolerance seems to depend on the same factors for autoantigens as it does for any other antigen 146 Rabbits rendered tolerant to bovine serum albumin respond to immunization with human serum albumin and in doing so frequently produce antibodies that react with bovine serum albumin which means the termination of tolerance This is of special interest as a model of autoimmune disease since natural tolerance of body constituents might be terminated by immunization with a cross reactive antigen from the environment 266 It cannot be overemphasized how difficult it could be at least in several instances to delineate specific from non specific events in any immunological process Cyclic AMP may be one of the examples for non specific inducers whereas thymopoietin 25a for instance induces only the differentiation of cells with thymus specific antigens The participation of cells recruited by lymphokines also represents non specific amplification Lymphocytes of unrelated specificity continue to accumulate in experimental autoimmune inflammation after elimination of the specifically sensitized cells that initiated the inflammation 262 Allergy Frontiers: Classification and Pathomechanisms Ruby Pawankar, Stephen T. Holgate, Lanny J. Rosenwasser, 2009-03-13 When I entered the field of allergy in the early 1970s the standard textbook was a few hundred pages and the specialty was so compact that texts were often authored entirely by a single individual and were never larger than one volume Compare this with Allergy Frontiers Epigenetics Allergens and Risk

Factors the present s volume text with well over 150 contributors from throughout the world This book captures the explosive growth of our specialty since the single author textbooks referred to above The unprecedented format of this work lies in its meticulous attention to detail yet comprehensive scope For example great detail is seen in manuscripts dealing with topics such as Exosomes naturally occurring minimal antigen presenting units and Neuropeptide S receptor 1 NPSR1 an asthma susceptibility gene The scope is exemplified by the unique approach to disease entities normally dealt with in a single chapter in most texts For example anaphylaxis a topic usually confined to one chapter in most textbooks is given five chapters in Allergy Frontiers This approach allows the text to employ multiple contributors for a single topic giving the reader the advantage of being introduced to more than one viewpoint regarding a single disease

Immunology and Allergy Richard F. Lockey, Samuel C. Bukantz, 1987 *Treatment of Autoimmune Disorders* Michael Sticherling, Enno Christophers, 2003 Progress in basic and clinical immunology within the last two decades has provided profound insight into the immune system and its role in preventing endogenous and exogenous damage In contrast disbalances within this system can result in autoimmune disorders which may affect diverse organs and result in distinct clinical pictures In many of these however the individual etiopathogenetic mechanisms are poorly understood and even more their clinical symptoms are hard to treat The book offers insight into basic mechanisms of autoimmune disorders It includes neurological gastrointestinal ophthalmological and skin diseases as well as current and future therapeutic options including immunomodulatory drugs and different vaccination strategies By addressing diverse organ systems both singular and shared features are elaborated Thus an exchange of ideas is intended across research on single organ systems within a truly interdisciplinary setting Systemic Lupus Erythematosus, an Issue of Rheumatic Disease Clinics Ellen M. Ginzler, 2014-07-22 In only the last four years there have been dramatic changes in the understanding of the immunology genetic epigenetic associations and identification of new targets for therapy in Systemic Lupus Erythematosus The editors have enlisted a superb group of authors to present articles detailing cutting edge advances in these areas
