### **Progress In Aeronautical Sciences Volume 3:**

*Progress in Aeronautical Sciences: Turbulent boundary layers in incompressible flow*, by J.C. Rotta Antonio Ferri, Dietrich Küchemann, L. H. G. Sterne, 1962 **Progress in Aeronautical Sciences D.**

Küchemann, L. H. G. Sterne, 2016-07-04 **Progress in Aeronautical Sciences Volume 6** reviews advances in aeronautical sciences and considers a wide range of problems related to aerodynamics including some classical problems of fluid motion and those affecting hypersonic aircraft. Topics covered range from equations of gas flow at low density nonequilibrium expansion flows of dissociated oxygen and ionized argon around a corner and the role of spatially growing waves in the theory of hydrodynamic stability. This volume is comprised of five chapters and begins with a discussion on flows of gases where the density of the gas is too low for equations of continuum gas dynamics to be applicable. The kinetic theory of gases is used to derive the equations governing such flows. The second chapter deals with the nature of shock waves in flows of electrically conducting gases subjected to magnetic fields. The third chapter is concerned with the theory of two dimensional flows of dissociated oxygen or ionized argon expanding around a corner. The fourth chapter goes back to the classical problem of hydrodynamic stability and the possible mechanics underlying the transition from the laminar to a turbulent state of the flow. The last chapter describes a future type of aircraft that can fly at hypersonic speeds. This book will be a useful resource for students and practitioners in the field of aeronautics. **Progress in Aeronautical Sciences** Antonio Ferri, D. Küchemann, L. H. G. Sterne, 2016-06-30 **Progress in Aeronautical Sciences Volume 3** deals with topics in the field of aerodynamics. The book covers topics on aerodynamic design, propulsion systems, hypersonic flows, laboratories and gust research. The text is composed of four articles. The first article presents a review of the aspects of aerodynamic design of swept winged aircraft. The second paper surveys the applications of ducted propellers. Critical reviews of experimental hypersonic facilities are provided in Chapter 3. The last paper focuses on the meteorological and aeronautical aspects of atmospheric turbulence. Aeronautical engineers, pilots, aviators and students in the field of aerodynamic design will find this book invaluable. **Progress in Aeronautical Sciences, Vol. 3** Antonio Ferri, D. Küchemann, L. H. G. Sterne, 1962 *Synthesis of Subsonic Airplane Design* E. Torenbeek, 2013-06-29 Since the education of aeronautical engineers at Delft University of Technology started in 1940 under the inspiring leadership of Professor H. J. van der Maas, much emphasis has been placed on the design of aircraft as part of the student's curriculum. Not only is aircraft design an optional subject for thesis work but every aeronautical student has to carry out a preliminary airplane design in the course of his study. The main purpose of this preliminary design work is to enable the student to synthesize the knowledge obtained separately in courses on aerodynamics, aircraft performances, stability and control, aircraft structures etc. The student's exercises in preliminary design have been directed through the years by a number of staff members of the Department of Aerospace Engineering in Delft. The author of this book, Mr. E. Torenbeek, has made a large contribution to this part of the study programme for many

years Not only has he acquired vast experience in teaching airplane design at university level but he has also been deeply involved in design oriented research e.g. developing rational design methods and systematizing design information I am very pleased that this wealth of experience methods and data is now presented in this book
