Advances in Asymmetric Autocatalysis and Related Topics Gyula Palyi, Robert Kurdi, Claudia Zucchi, 2017-05-18 *Advances in Asymmetric Autocatalysis and Related Topics* provides various viewpoints on the important developments in asymmetric autocatalysis that have occurred in the past few years also including brand new information in the field Asymmetric autocatalysis is a chemical reaction which leads from achiral starting materials to chiral products and in which the product accelerates its own

formation reaction conventional catalysis and promotes the prevalence of its own chiral configuration asymmetric induction The combination of these two effects in the same reaction was unprecedented before 1995 when it was first described by Kenso SOAI at the Tokyo University of Science Since then several new combinations of this effect have been found most intriguingly the possibility of absolute asymmetric synthesis which is the spontaneous formation of the excess of one of the enantiomers of the product a dream of organic chemists for more than a century The book contains expert contributed chapters that describe the most exciting recent developments in the field of the Soai reaction and in related topics ranging from mechanistic studies and theoretical research to very practical problems in chiral syntheses and products Features contributions from global experts including several chapters from Kenso Soai and expert colleagues Focuses on recent developments in the field of asymmetric autocatalysis and newly reported findings Explores the Soai reaction new developments and the light it sheds on homochirality in certain biomolecules *Biochirality* Pedro Cintas, 2014-07-08 Early History of the Recognition of Molecular Biochirality by Joseph Gal Pedro Cintas Synthesis and Chirality of Amino Acids Under Interstellar Conditions by Chaitanya Giri Fred Goesmann Cornelia Meinert Amanda C Evans Uwe J Meierhenrich Chemical and Physical Models for the Emergence of Biological Homochirality by son E Hein Dragos Gherase Donna G Blackmond Biomolecules at Interfaces Chiral Naturally by Ar ntzazu Gonz lez Campo and David B Amabilino Stochastic Mirror Symmetry Breaking Theoretical Models and Simulation of Experiments by Celia Blanco David Hochberg Self Assembly of Dendritic Dipeptides as a Model of Chiral Selection in Primitive Biological Systems by Brad M Rosen C cile Roche Virgil Percec Chirality and Protein Biosynthesis by Sindrila Dutta Banik Nilashis Nandi **Organometallic Chirality** Gyula Pályi, Luciano Caglioti, 2008 *Chirality at the Nanoscale* David B. Amabilino, 2009-02-11 The only standard reference in this exciting new field combines the physical chemical and material science perspectives in a synergic way This monograph traces the development of the preparative methods employed to create nanostructures in addition to the experimental techniques used to characterize them as well as some of the surprising physical effects The chapters cover every category of material from organic to coordination compounds metals and composites in zero one two and three dimensions The book also reviews structural chemical optical and other physical properties finishing with a look at the future for chiral nanosystems

Progress in Drug Research / Fortschritte der Arzneimittelforschung / Progrès des recherches pharmaceutiques JUCKER, MEYER, 2013-03-07 In the first years of the existence of this series of monographs during the so called Golden Age of drug research the majority of the papers published were mainly concerned with the traditional domains of drug research namely chemistry pharmacology toxicology and pre clinical investigations The series aim was to give coverage to important areas of research to introduce new active substances with therapeutic potential and to call attention to unsolved problems This objective has not changed The table of contents of the present volume makes evident however that the search for new medicines has become increasingly complex and additional new disciplines have entered the research arena The series now

includes reviews on bio chemical biological immunological physiological and medicinal aspects of drug research Researchers actively engaged in the various scientific fields forming the entity of drug research can benefit from the wealth of knowledge and experience of the respective authors and will be assisted in their endeavour to discover new pharmaceutical agents Those simply wanting to keep abreast of new developments in the complex multi discipline science can turn to the Progress in Drug Research volumes as an almost encyclopaedic source of information without having to consult the innumerable original publications Volume 32 contains 12 reviews a subject index an index for the close to 400 articles published in the series so far and an author and titles index for all 32 volumes

Origin of Life via Archaea Richard Gordon,2024-08-26

This book surveys the models for the origin of life and presents a new model starting with shaped droplets and ending with life as polygonal Archaea it collects the most published micrographs of Archaea discovered only in 1977 which support this conclusion and thus provides the first visual survey of Archaea Origin of Life via Archaea s purpose is to add a new hypothesis on what are called shaped droplets as the starting point for flat polygonal Archaea supporting the Vesicles First hypothesis The book contains over 6000 distinct references and micrographs of 440 extant species of Archaea 41% of which exhibit polygonal phenotypes It surveys the intellectual battleground of the many ideas of the origin of life on earth chemical equilibrium autocatalysis and biotic polymers This book contains 17 chapters some coauthored on a wide range of topics on the origin of life including Archaea s origin patterns and species It shows how various aspects of the origin of life may have occurred at chemical equilibrium not requiring an energy source contrary to the general assumption For the reader s value its compendium of Archaea micrographs might also serve many other interesting questions about Archaea One chapter presents a theory for the shape of flat polygonal Archaea in terms of the energetics at the surface edges and corners of the S layer Another shows how membrane peptides may have originated The book also includes a large table of most extant Archaea that is searchable in the electronic version It ends with a chapter on problems needing further research Audience This book will be used by astrobiologists origin of life biologists physicists of small systems geologists biochemists theoretical and vesicle chemists
