Progress In Biophysics And Molecular Biology Volume 41:

Progress in Biophysics and Molecular Biology J. A. V. Butler, D. Noble, 2014-05-18 *Progress in Biophysics and Molecular Biology* Volume 32 summarizes the significant progress that has been made in the fields of biophysics and molecular biology. Topics range from metabolic regulation and transfer RNA to cellular metabolism and prokaryotic and eukaryotic ribosomes. This volume consists of five chapters and begins with a discussion of mathematical models used in the study of metabolic regulation with emphasis on the energy metabolism of eukaryotes. The next chapter examines the possible functions of transfer RNA minor components paying particular attention to the principle of location function relationships. The reader is also introduced to spatial functional correlations in cellular metabolism and highlights the role of organized multienzyme systems along with the fundamentals of ribosome structure and function in prokaryotes and eukaryotes. A chapter that analyzes the structures and functions of transfer RNA concludes the book. This book will be of interest to scientists, students, and researchers working in the fields of biophysics and molecular biology.

Progress in Biophysics and Molecular Biology D. Noble, T. L. Blundell, 1983-12 *Progress in Biophysics and Biophysical Chemistry*, 1987 **The Publishers' Trade List Annual**, 1986 **Characterizing Cardiac Electrophysiology during Radiofrequency Ablation : An**

Integrative Ex vivo, In silico, and In vivo Approach Pollnow, Stefan, 2019-04-23 Catheter ablation is a major treatment for atrial tachycardias. Hereby the precise monitoring of the lesion formation is an important success factor. This book presents computational wet lab and clinical studies with the aim of evaluating the signal characteristics of the intracardiac electrograms (IEGMs) recorded around ablation lesions from different perspectives. The detailed analysis of the IEGMs can optimize the description of durable and complex lesions during the ablation procedure. *Cardio-Physiology Challenging Empirical Philosophy* Brigitte Lohff, Jochen Schaefer, 2022-08-10 With this volume of three essays the authors want to create an opportunity for dialogue between different disciplines by taking a closer look at three cardio-physiological examples. In the essays presented we will look at the exploration of different cardiological topics from the 20th century, all of which have contributed to a better understanding of certain aspects of cardiac activity. Not only do these insights provide a more complete picture of these cardiac phenomena but it is also within this context that we can look for and into the patterns of regularities which govern this living organism. Our goal is to stimulate a dialogue on the philosophy of science in the spirit of Hans Reichenbach.

Chemistry & Physics of Carbon Peter A. Thrower, 1996-10-11 Volume 25 introduces methods for the preparation of carbyne and addresses theoretical issues, discusses carbyne properties, spectroscopy, and chemical and crystal structure. It explains the use of x-ray and neutron scattering for the structural evaluation of carbonaceous materials and more.

Cell Mechanics And Tumor Development Ronald L. Huston, 2020-02-18 The focus of this book is on centrioles, small organelles adjacent to the nucleus in all human and animal eucaryotic cells. It provides the findings and critical analyses of over 750 articles written in this century. In addition to centrioles, the topics include centrosomes, chromosomes, microtubules.

and kinetochores cell division and duplication and tumor development The book also includes discussions on centriole dynamics and electromagnetics effects It concludes with a chapter on centriole errors particularly cells with supernumerary centrioles The book is intended for students scholars and researchers studying and working in the field of nuclear mechanics In addition to the book content it provides a guide for literature investigation **The Enzymes of Biological Membranes**

Anthony Martonosi, 2012-12-06 In the first edition of The Enzymes of Biological Membranes published in four volumes in 1976 we collected the mass of widely scattered information on membrane linked enzymes and metabolic processes up to about 1975 This was a period of transition from the romantic phase of membrane biochemistry preoccupied with conceptual developments and the general properties of membranes to an era of mounting interest in the specific properties of membrane linked enzymes analyzed from the viewpoints of modern enzymology The level of sophistication in various areas of membrane research varied widely the structures of cytochrome c and cytochrome b were known to atomic detail while the majority of membrane linked enzymes had not even been isolated In the intervening eight years our knowledge of membrane linked enzymes expanded beyond the wildest expectations The purpose of the second edition of The Enzymes of Biological Membranes is to record these developments The first volume describes the physical and chemical techniques used in the analysis of the structure and dynamics of biological membranes In the second volume the enzymes and metabolic systems that participate in the biosynthesis of cell and membrane components are discussed The third and fourth volumes review recent developments in active transport oxidative phosphorylation and photosynthesis **A Multiscale In Silico Study to**

Characterize the Atrial Electrical Activity of Patients With Atrial Fibrillation : A Translational Study to Guide Ablation Therapy Sánchez Arciniegas, Jorge Patricio, 2022-05-30 The atrial substrate undergoes electrical and structural remodeling during atrial fibrillation Detailed multiscale models were used to study the effect of structural remodeling induced at the cellular and tissue levels Simulated electrograms were used to train a machine learning algorithm to characterize the substrate Also wave propagation direction was tracked from unannotated electrograms In conclusion in silico experiments provide insight into electrograms information of the substrate **Membranes and Sensory**

Transduction Giuliano Colombetti, Francesco Lenzi, 2012-12-06 The main purpose of this book is to unify approaches and ideas in the field of a neural sensory transduction This field has recently come to the attention of several research groups in various disciplines and their number seems to be growing Unfortunately because of the diverse scientific backgrounds of the researchers in the field the apparent heterogeneity of experimental techniques i.e. behavioral response analysis sophisticated biochemical and genetic manipulations conventional and pulsed laser spectroscopy and theoretical approaches may be discouraging for both the experienced worker and the new comer Actually this heterogeneity is more apparent than real and unifying concepts approaches and ideas already exist particularly with respect to all the questions concerning the role of membranes and their properties such as ion permeability electric potentials and active transport in the various steps of

sensory perception and transduction processes It is currently accepted that most if not all the fundamental facts in molecular sensory physiology of aneural organisms be they chemosensory photosensory or geosensory can ultimately be understood in terms of a few basic ideas Each chapter of this book emphasizes and clarifies the role of membrane properties and phenomena in the particular sensory response examined Of course in some cases this task has been rather complex because of the limited amount of experimental data clearly supporting a membrane based model of sensory transduction

Basic Food Chemistry Frank Lee, 2012-12-06 Food chemistry has grown considerably since its early foundations were laid This has been brought about not only by research in this field but also and more importantly by advances in the basic sciences involved In this second edition the chapters dealing with fundamentals have been rewritten and strengthened Three new chapters have been added Water and Solutions Colloids and Minerals The chapter on Fruits and Vegetables has been expanded to cover texture Other chapters discuss flavor and colors together with one on browning reactions The last seven chapters give the student a background of the classes of food products and beverages encountered in everyday use Each chapter includes a summary and a list of references and suggested readings to assist the student in study and to obtain further information Basic Food Chemistry is intended for college undergraduates and for use in food laboratories The author wishes to express his appreciation to the following people who reviewed the chapters on their respective specialties Doctors L R Hackler M Keeney B Love L M Massey Jr L R Mattick W B Robinson R S Shallenberger D F Splittstoesser E Stotz W L Sulzbacher and J Van Buren In addition the author wishes to express his appreciation to Dr H O Hultin and Dr F W Knapp for their reviews of the entire original manuscript and for their helpful comments The author welcomes notices of errors and omissions as well as suggestions and constructive criticism

Progress in Nucleic Acid Research and Molecular Biology, 1991-08-16 Progress in

Nucleic Acid Research and Molecular Biology **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1977 Life Sciences, Information Sciences Thierry Gaudin, Dominique Lacroix, Marie-Christine Maurel, Jean-Charles Pomerol, 2018-03-15 Developed from presentations given at the Cerisy SVSI Sciences de la vie sciences de l'information conference held in 2016 this book presents a broad overview of thought and research at the intersection of life sciences and information sciences The contributors to this edited volume explore life and information on an equal footing with each considered as crucial to the other In the first part of the book the relation of life and information in the functioning of genes at both the phylogenetic and ontogenetic levels is articulated and the common understanding of DNA as code is problematized from a range of perspectives The second part of the book homes in on the algorithmic nature of information questioning the fit between life and automaton and the accompanying division between individualization and invariance Consisting of both philosophical speculation and ethological research the explorations in this book are a timely intervention into prevailing understandings of the relation between information and life **Myelin** Pierre Morell, 2013-11-21 The division of the mature mammalian brain and spinal cord into regions of white matter and gray matter is observable upon the most cursory inspection Microscopic examination indicates that the white matter regions are characterized by a multilamellar sheath myelin which surrounds the axons A morphologically similar myelin imparts the white color to tracts of the peripheral nervous system although as is emphasized throughout the book there are very significant morphological and chemical differences between central and peripheral myelin The rapid postnatal accumulation of myelin is temporally associated with increasing functional capacity and presumably indicates some important role related to neuronal activity The ability of myelinated axons to conduct electrical impulses much more rapidly and with much lower use of energy relative to unmyelinated axons is now generally accepted As is evident from the above capsule description a considerable body of information concerning myelin is available However as in other areas of research the unknown expands before us more rapidly than we are able to add to our core of knowledge This is a corollary of the axiom that a good experiment raises more questions than it answers Among the areas currently under investigation in many laboratories are the following interaction of myelin forming cells with neurons assembly and metabolism of myelin molecular architecture of myelin and the details of the functional role of myelin *Biochemistry of Sensory Functions* L. Jaenicke, 2012-12-06 This volume contains the Proceedings of the 25th Mosbach Colloquium the general theme of which is the Biochemistry of Sensory Functions It was intended continuing the silver tradition of these Colloquia to provide the uninitiated biochemist with an insight into the current status of a line of research in Molecular Biology which more than many other fields in Biochemistry has maintained its contacts with and respect for Physiology The speakers were asked to attempt to outline their topic sufficiently to define the fundamentals and to build up upon this basis the more sophisticated details of their own studies It is for the reader to evaluate how well both organizer and participants have attained this end These Proceedings not only mirror the hubs around which several

groups of scientists wheel but may also serve as a source of literature references and for the advanced student as an introduction to this highly up to date branch of Biochemistry although no index is provided as the table of contents is considered sufficient to locate most of the s *Progress in Molecular and Subcellular Biology* ,2012-12-06 **Dynamic Aspects of Cell Surface Organization** George Poste,Garth L. Nicolson,2013-10-22 Cell Surface Reviews Volume 3 Dynamic Aspects of Cell Surface Organization reviews the progress in the study of the dynamic nature of membrane organization The book is comprised of 14 chapters that discuss the various areas of concerns relating to membrane dynamics The coverage of the text includes techniques and methods employed in the analysis and manipulation of the various aspects of cell membranes such as freeze fracture techniques manipulation of the lipid composition of cultured animal cells and somatic genetic analysis The book also talks about some of the traits and behaviors of membrane dynamics including shedding of tumor cell surface antigens dynamics of antibody binding and complement interactions at the cell surface and structure and function of surface immunoglobulin of lymphocytes The text will be of great use to microbiologists biochemists and other researchers whose work requires a good understanding of the various aspects of cells
