Hypertension is one of the cardiovascular diseases which is most common throughout the world It is generally defined as an elevation of systolic and or diastolic arterial blood pressure which is 120/80 mm Hg in normal situation A value of 140/90 mm is generally accepted as the upper limit of normotension Hypertension with certain risk factors such as hypercholesterolemia diabetes smoking and a family history of vascular disease pre disposes to arteriosclerosis and consequent cardiovascular morbidity and mortality The treatment of hypertension leads to reduced risk of hypertensive renal failure haemorrhagic stroke myocardial infarction and cardiac failure In most cases the cause of the hypertension can not be clearly defined Such hypertension is termed as essential hypertension In a few cases 5-15% the hypertension is secondary to definable causes such as renal artery stenosis a pheochromocytoma or an endocrine disorder This type of hypertension is known as secondary hypertension Although the exact etiology of essential hypertension is still not well known the following factors are supposed to play causative roles *The Evolution of Drug Discovery* Enrique Ravina,2011-04-18 The discovery and use of medicines is just as fascinating a human scientific endeavor as space flight or the tracing of human evolution It is also the everyday task of hundreds of thousands of pharmacists pharmaceutical chemists and researchers worldwide Based on his profound knowledge of past and present paradigms in the development of medicines Enrique Ravina takes the reader from the very beginnings of pharmacology to the multibillion dollar business it represents today Recounting the often spectacular successes and failures of innovative drugs as well as the people who discovered them he brings abstract science to life in anecdotal form For anyone with a more than superficial interest in the science of drugs and all those interested in knowing how drugs have been developed how they have reached us and became part of our daily life This book is beautifully illustrated containing many rare and historical photographs of drugs and their discoverers and abounds with references to the primary literature listing seminal publications alongside more modern reviews for readers seeking further details With a Foreword by Hugo Kubinyi
