By 1960 the scientific community began observing an ever increasing explosion in the literature embracing the many facets of industrial microbiology. Many of the so called traditional areas were being replaced by more modern provocative channels of endeavor. It was about this time that excellent review type annual publications such as *Advances in Applied Microbiology*, *Progress in Industrial Microbiology* and *Developments in Industrial Microbiology* emerged reporting the exciting new work. It was soon thereafter that the Division of Microbial Chemistry shed its probationary status to become a bona fide unit of the American Chemical Society. A rash of new applied microbiological textbooks arrived on the scene. The number of journals reporting the day to day scientific achievements also burgeoned. Early in my industrial career I found it imperative to devise a workable key to the ever increasing volume of literature that was emerging. This I compiled over the years on voluminous stacks of file cards which have in essence been reprinted here as my *Guide to the Literature for the Industrial Microbiologist*. The Guide has indeed served me well and through it one can readily ascertain the state of the art of any of the many specialized subjects of industrial microbiology. Logically one would first consult recent textbooks to obtain an overview of the subject being searched. Bacterial Indicators/health Hazards Associated with Water A. W. Hoadley, B. J. Production from Agricultural and Domestic Wastes Hobson, 2012-12-06. This volume in the *Energy from Wastes Series* covers the area of methane production from agricultural and domestic wastes. Principally this involves the conversion of excreta and other organic effluents to a valuable gaseous fuel plus in many cases a useful sludge for fertiliser or feedstuffs. Dr Hobson and his colleagues have written a comprehensive text on the principles of microbiological processes and the biochemistry of anaerobic digestion embracing the design of digesters with examples of current working installations. The potential for anaerobic digestion of wastes as diverse as sewage to fruit processing effluents is also reviewed. This work should be of interest to all who have to manage organic waste treatment and disposal as well as to a wider readership who wish to know more about methane production by anaerobic digestion. **ANDREW PORTEOUS** v Preface. The production of methane or more exactly a flammable biogas containing methane and carbon dioxide by microbiological methods: anaerobic digestion is not new. The reactions have been in industrial use for over a hundred years but only in sewage purification processes. In some times of national stress such as war time the microbiological production of gas purely for fuel has been investigated but with the resumption of plentiful supplies of fossil fuels the investigations have faded away. **Water**
