Progress in Liquid Physics Clive A. Croxton, 1978 **Progress in Liquid Physics** CA Croxton (ed), 1978 *Introduction to Modern Methods of Quantum Many-body Theory and Their Applications* A. Fabrocini, Stefano Fantoni, Eckhard Krotscheck, 2002 The book contains pedagogical articles on the dominant non stochastic methods of microscopic many body theories Density functional theory coupled cluster theory and correlated basis functions methods in their widest sense Further articles introduce students to applications of these methods in front line research such as Bose Einstein condensates the nuclear many body problem and the dynamics of quantum liquids These keynote articles are supplemented by experimental reviews on intimately connected topics of current relevance The book addresses the striking lack of pedagogical reference literature in the field that allows researchers to acquire the requisite physical insight and technical skills The volume should therefore not only serve as a collection of information relevant to those who attended the school but it provides be useful reference material to a broad range of theoretical physicists in condensed matter and nuclear theory

Microscopic Approaches to Quantum Liquids in Confined Geometries Eckhard Krotscheck, Jesús Navarro, 2002 This volume assembles review articles that present the status of frontline research in this field in a manner that makes the material accessible to the educated but non specialist reader The articles focus on the many body aspects of the theory of quantum liquids in confined geometry Research is in the very satisfactory situation where several accurate approaches are available that allow one to describe these systems in a quantitative manner without modelling uncertainty and uncontrolled assumptions For example dynamic situations of direct experimental relevance can be modelled with high accuracy
