**Progress in Medicinal Chemistry**, 1996-04-24 *Progress in Medicinal Chemistry*  
David R. Witty, Brian Cox, 2020-04-30 *Progress in Medicinal Chemistry Volume 59* provides a review of eclectic developments in medicinal chemistry. Each chapter is written by an international board of authors with this release focusing on Small Molecules, Giant Leaps for Immuno Oncology, Reviewing P2X7, Reviewing ASK1, and Reviewing DNA encoded libraries. Provides extended timely reviews of topics in medicinal chemistry. Contains targets and technologies relevant to the discovery of tomorrow's drugs. Presents analyses of successful drug discovery programs. **Progress in Medicinal Chemistry** G. Lawton, David R. Witty, 2009-05-21 This volume provides reviews of six topics demonstrating the breadth of the field and recent successes in medicinal chemistry. Each of the first five chapters takes an important biochemical target as its theme and provides an insight into current progress in drug design. The last chapter focuses on the vital subject of pharmacokinetics and the great strides that have been made in this discipline during the past decade. All chapters provide an insight into the skills required of the modern medicinal chemist in particular the use of an appropriate selection of the wide range of tools now available to solve key scientific problems. Presents the latest research in the field of drug discovery. Publishes on a twice yearly basis to bring you the most innovative updates in medicinal chemistry. Available as an online resource via ScienceDirect. *Progress in Drug Research*, 2012-12-06 Hypertension is one of the cardiovascular diseases which is most common throughout the world. It is generally defined as an elevation of systolic and/or diastolic arterial blood pressure which is 120/80 mm Hg in normal situation. A value of 140/90 mm is generally accepted as the upper limit of normotension. Hypertension with certain risk factors such as hypercholesterolemia, diabetes, smoking, and a family history of vascular disease predisposes to arteriosclerosis and consequent cardiovascular morbidity and mortality. The treatment of hypertension leads to reduced risk of hypertensive renal failure, haemorrhagic stroke, myocardial infarction, and cardiac failure. In most cases the cause of the hypertension can not be clearly defined. Such hypertension is termed as essential hypertension. In a few cases 5-15% the hypertension is secondary to definable causes such as renal artery stenosis, a pheochromocytoma, or an endocrine disorder. This type of hypertension is known as secondary hypertension. Although the exact etiology of essential hypertension is still not well known, the following factors are supposed to play causative roles.  
*Current Medicinal Chemistry*, 1994-12 *Cumulated Index Medicus*, 1989 *Advances in Drug Research* Bernard Testa, 2013-10-22 *Advances in Drug Research Volume 20* focuses on the general themes of drug research and description of specific drug classes. This book is divided into four chapters. Chapter 1 discusses the extrapolation of toxicological and pharmacological data from animals to humans. The second chapter deals with the tissue binding of drugs considering the relative ponderal importance of tissue versus blood macromolecules. The therapeutic use of plants and consumption of medicinal plants are elaborated in Chapter 3. The last chapter covers the field of histaminergic agonists and antagonists.

**Current Medicinal Chemistry** ,1997-06 **Progress in Medicinal Chemistry** F.D. King,G. Lawton,2006-04-25 The perceived lack of drug discovery productivity in recent times has led to much debate in the pharmaceutical biotechnology industry as escalating R D costs are not being matched by increased output Few observers doubt that selecting the right targets ie those which are critical to disease pathology and are druggable is the best starting point for improved productivity The seven chapters of this volume describe recent progress towards drugs acting at a range of druggable targets One chapter addresses kinases one covers an ion channel two proteases are featured and three of the chapters cover G protein coupled receptors which has historically perhaps been the most fruitful area for medicinal chemists Presents the latest research in the field of drug discovery Publishes on an annual basis to bring you the most innovative updates in medicinal chemistry Available as an online resource via ScienceDirect

**Progress in Drug Research / Fortschritte der Arzneimittelforschung / Progrès des recherches pharmaceutiques** JUCKER,2013-03-08 Volume 22 of Progress in Drug Research contains 8 contributions from various areas of drug research and therapy As in previous volumes in the present volume the authors have also tried not only to summarize the current status of particular fields of drug research but also to provide leads for future research activity The various contributions in this volume will be of especial value not only to those actively concerned in resolving the diverse problems in drug research but also to those who wish to keep abreast of the latest developments influencing modern therapy In addition it is believed that volume 22 and the previous 21 volumes of Progress in Drug Research so far published represent a useful reference work of an encyclopaedic character The editor would also like to take this opportunity of expressing his gratitude to those who reviewed the previous volumes of this series of monographs and by doing so gave useful advice for the future volumes At the same time thanks are expressed to Dr A Naf for carefully working over the manuscripts and correcting proofs Thanks are also due to the publishers and the printers Druckerei Birkhauser especially to Messrs Th Birkhauser and C Einsele Unfortunately this is the last volume which went into press during Dr A Birkhauser's lifetime he passed away on March 4 1978 and the editor would like to stress the fact that
