Progress in Mathematics, Vol. 5: Algebra R. V. Gamkrelidze, 1969 *Mathematical Analysis* R. V.

Gamkrelidze, 2012-12-06 This volume contains three articles Asymptotic methods in the theory of ordinary differential equations by V F Butuzov A B Vasil'eva and M V Fedoryuk The theory of best approximation in normed linear spaces by A L Garkavi and Dynamical systems with invariant measure by A VI Vershik and S A Yuzvinskii The first article surveys the literature on linear and non linear singular asymptotic problems in particular differential equations with a small parameter The period covered by the survey is primarily 1962-1967 The second article is devoted to the problem of existence characterization and uniqueness of best approximations in Banach spaces One of the chapters also deals with the problem of the convergence of positive operators inasmuch as the ideas and methods of this theory are close to those of the theory of best approximation The survey covers the literature of the decade 1958-1967 The third article is devoted to a comparatively new and rapidly growing branch of mathematics which is closely related to many classical and modern mathematical disciplines A survey is given of results in entropy theory classical dynamic systems ergodic theorems etc The results surveyed were primarily published during the period 1956-1967 Berkovich Spaces and Applications Antoine Ducros, Charles

Favre, Johannes Nicaise, 2014-11-21 We present an introduction to Berkovich's theory of non archimedean analytic spaces that emphasizes its applications in various fields The first part contains surveys of a foundational nature including an introduction to Berkovich analytic spaces by M Temkin and to étale cohomology by A Ducros as well as a short note by C Favre on the topology of some Berkovich spaces The second part focuses on applications to geometry A second text by A Ducros contains a new proof of the fact that the higher direct images of a coherent sheaf under a proper map are coherent and B Romy A Thuillier and A Werner provide an overview of their work on the compactification of Bruhat-Tits buildings using Berkovich analytic geometry The third and final part explores the relationship between non archimedean geometry and dynamics A contribution by M Jonsson contains a thorough discussion of non archimedean dynamical systems in dimension 1 and 2 Finally a survey by J P Otal gives an account of Morgan-Shalen's theory of compactification of character varieties This book will provide the reader with enough material on the basic concepts and constructions related to Berkovich spaces to move on to more advanced research articles on the subject We also hope that the applications presented here will inspire the reader to discover new settings where these beautiful and intricate objects might arise *Probability Theory, Mathematical*

Gauss work in which arithmetic topology originated the text reviews a background from both topology and number theory The analogy between knots in 3 manifolds and primes in number rings the founding principle of the subject is based on the tale topological interpretation of primes and number rings On the basis of this principle the text explores systematically intimate analogies and parallel results of various concepts and theories between 3 dimensional topology and number theory The presentation of these analogies begins at an elementary level gradually building to advanced theories in later chapters Many results presented here are new and original References are clearly provided if necessary and many examples and illustrations are included Some useful problems are also given for future research All these components make the book useful for graduate students and researchers in number theory low dimensional topology and geometry This second edition is a corrected and enlarged version of the original one Misprints and mistakes in the first edition are corrected references are updated and some expositions are improved Because of the remarkable developments in arithmetic topology after the publication of the first edition the present edition includes two new chapters One is concerned with idelic class field theory for 3 manifolds and number fields The other deals with topological and arithmetic Dijkgraaf Witten theory which supports a new bridge between arithmetic topology and mathematical physics

The Geometry and Topology of Coxeter Groups

Michael W. Davis, 2025-07-30 This book now in a revised and extended second edition offers an in depth account of Coxeter groups through the perspective of geometric group theory It examines the connections between Coxeter groups and major open problems in topology related to aspherical manifolds such as the Euler Characteristic Conjecture and the Borel and Singer Conjectures The book also discusses key topics in geometric group theory and topology including Hopf s theory of ends contractible manifolds and homology spheres the Poincaré Conjecture and Gromov s theory of CAT 0 spaces and groups In addition this second edition includes new chapters on Artin groups and their Betti numbers Written by a leading expert the book is an authoritative reference on the subject

Systolic Geometry and Topology Mikhail Gersh Katz, 2007

The systole of a compact metric space X is a metric invariant of X defined as the least length of a noncontractible loop in X When X is a graph the invariant is usually referred to as the girth ever since the 1947 article by W Tutte The first nontrivial results for systoles of surfaces are the two classical inequalities of C Loewner and P Pu relying on integral geometric identities in the case of the two dimensional torus and real projective plane respectively Currently systolic geometry is a rapidly developing field which studies systolic invariants in their relation to other geometric invariants of a manifold This book presents the systolic geometry of manifolds and polyhedra starting with the two classical inequalities and then proceeding to recent results including a proof of M Gromov s filling area conjecture in a hyperelliptic setting It then presents Gromov s inequalities and their generalisations as well as asymptotic phenomena for systoles of surfaces of large genus revealing a link both to ergodic theory and to properties of congruence subgroups of arithmetic groups The author includes results on the systolic manifestations of Massey products as well as of the classical Lusternik Schnirelmann category

The Book of

Involutions Max-Albert Knus, 1998-06-30 This monograph is an exposition of the theory of central simple algebras with involution in relation to linear algebraic groups. It provides the algebra theoretic foundations for much of the recent work on linear algebraic groups over arbitrary fields. Involutions are viewed as twisted forms of hermitian quadrics leading to new developments on the model of the algebraic theory of quadratic forms. In addition to classical groups phenomena related to triality are also discussed as well as groups of type F_4 or G_2 arising from exceptional Jordan or composition algebras. Several results and notions appear here for the first time notably the discriminant algebra of an algebra with unitary involution and the algebra theoretic counterpart to linear groups of type D_4 . This volume also contains a Bibliography and Index. Features original material not in print elsewhere a comprehensive discussion of algebra theoretic and group theoretic aspects extensive notes that give historical perspective and a survey on the literature rational methods that allow possible generalization to more general base rings

Ricci Flow and Geometric Applications Michel Boileau, Gerard Besson, Carlo Sinestrari, Gang Tian, 2016-09-09 Presenting some impressive recent achievements in differential geometry and topology this volume focuses on results obtained using techniques based on Ricci flow. These ideas are at the core of the study of differentiable manifolds. Several very important open problems and conjectures come from this area and the techniques described herein are used to face and solve some of them. The book's four chapters are based on lectures given by leading researchers in the field of geometric analysis and low dimensional geometry topology respectively offering an introduction to the differentiable sphere theorem G Besson the geometrization of 3 manifolds M Boileau the singularities of 3 dimensional Ricci flows C Sinestrari and K hler Ricci flow G Tian. The lectures will be particularly valuable to young researchers interested in differential manifolds

Topology, Geometry and Quantum Field Theory Ulrike Luise Tillmann, 2004-06-28 The symposium held in honour of the 60th birthday of Graeme Segal brought together leading physicists and mathematicians. Its topics were centred around string theory M theory and quantum gravity on the one hand and K theory elliptic cohomology quantum cohomology and string topology on the other. Geometry and quantum physics developed in parallel since the recognition of the central role of non abelian gauge theory in elementary particle physics in the late seventies and the emerging study of super symmetry and string theory. With its selection of survey and research articles these proceedings fulfil the dual role of reporting on developments in the field and defining directions for future research. For the first time Graeme Segal's manuscript The definition of Conformal Field Theory is published which has been greatly influential over more than ten years. An introduction by the author puts it into the present context

Algebraic Monoids, Group Embeddings, and Algebraic Combinatorics Mahir Can, Zhenheng Li, Benjamin Steinberg, Qiang Wang, 2014-06-11 This book contains a collection of fifteen articles and is dedicated to the sixtieth birthdays of Lex Renner and Mohan Putcha the pioneers of the field of algebraic monoids. Topics presented include structure and representation theory of reductive algebraic monoids monoid schemes and applications of monoids monoids related to Lie theory equivariant embeddings of

algebraic groups constructions and properties of monoids from algebraic combinatorics endomorphism monoids induced from vector bundles Hodge Newton decompositions of reductive monoids A portion of these articles are designed to serve as a self contained introduction to these topics while the remaining contributions are research articles containing previously unpublished results which are sure to become very influential for future work Among these for example the important recent work of Michel Brion and Lex Renner showing that the algebraic semi groups are strongly regular Graduate students as well as researchers working in the fields of algebraic semi group theory algebraic combinatorics and the theory of algebraic group embeddings will benefit from this unique and broad compilation of some fundamental results in semi group theory algebraic group embeddings and algebraic combinatorics merged under the umbrella of algebraic monoids
