Laser Spectroscopy Wolfgang Demtröder, 2013-06-29 Keeping abreast of the latest techniques and applications this new edition of the standard reference and graduate text on laser spectroscopy has been completely revised and expanded While the general concept is unchanged the new edition features a broad array of new material e g frequency doubling in external cavities reliable cw parametric oscillators tunable narrow band UV sources more sensitive detection techniques tunable femtosecond and sub femtosecond lasers X ray region and the attosecond range control of atomic and molecular excitations frequency combs able to synchronize independent femtosecond lasers coherent matter waves and still more applications in chemical analysis medical diagnostics and engineering

Next Generation Mechanisms for Data Encryption Keshav Kumar, Bishwajeet Kumar Pandey, 2025-01-24 This book gives readers a deep insight into cryptography and discusses the various types of cryptography algorithms used for the encryption and decryption of data It also covers the mathematics behind the use of algorithms for encryption and decryption Features Presents clear insight to the readers about the various security algorithms and the different mechanisms used for data encryption Discusses algorithms such as symmetric encryption asymmetric encryption digital signatures and hash functions used for encryption Covers techniques and methods to optimize the mathematical steps of security algorithms to make those algorithms lightweight which can be suitable for voice encryption Illustrates software methods to implement cryptography algorithms Highlights a comparative analysis of models that are used in implementing cryptography algorithms The text is primarily written for senior undergraduates graduate students and academic researchers in the fields of electrical engineering electronics and communications engineering computer science and engineering and information technology

Trends in Quantum

Electronics A.M. Prokhorov, I. Ursu, 2013-03-09 The second International Conference on Trends in Quantum Electronics TQE 85 was held in Bucharest at the National Centre for Physics in September 1985 and brought together more than 350 scientists from 22 countries In accordance with the objectives established at the first conference which was held in 1982 in conjunction with the third International Summer School in Coherent Optics the second conference concentrated upon the central topics and chief directions of development in quantum electronics which stands out as an area of science and technology that is currently expanding vigorously On the other hand it was also apparent that TQE 85 was primarily influenced by the worldwide celebration in 1985 of the 25th anniversary of the laser a moment of prime importance in the development of many frontline fields including communications chemistry biology health care and materials processing A special session was devoted to this anniversary In keeping with the dynamic spirit of the conference the fine quality of the invited lectures and the other contributions set a high scientific standard for the proceedings Mention should be made of the posters that were presented throughout the conference These together with the exhibition of books and journals and a display of specialized scientific equipment did much to create a framework for effective communication and stimulating interaction to the benefit of all the participants Of invaluable help in the preparation of the conference was the collaboration of the International Scientific Advisory Committee

Progress in Atomic Spectroscopy W. Hanle,2013-03-09 W HANLE and H KLEINPOPPEN In 1919 in the first edition of *Atombau und Spektrallinien* Sommerfeld referred to the immense amount of information which had been accumulated during the first period of 60 years of spectroscopic practice Sommerfeld emphasized that the names of Planck and Bohr would be connected forever with the efforts that had been made to understand the physics and the theory of spectral lines Another period of almost 60 years has elapsed since the first edition of Sommerfeld's famous monograph As the editors of this monograph *Progress in Atomic Spectroscopy* we feel that the present period is best characterized by the large variety of new spectroscopic methods that have been invented in the last decades Spectroscopy has always been involved in the field of research on atomic structure and the interaction of light and atoms The development of new spectroscopic methods is as new as compared to the traditional optical methods has led to many outstanding achievements which together with the increase of activity over the last decades appear as a kind of renaissance of atomic spectroscopy **OAR Cumulative Index**
