Progress In Optics Volume Xxxvi 36:

Progress in Optics, 1996-12-11 This volume presents five review articles covering a broad range of topics which will be of interest to many scientists concerned with optics and related subjects The first article deals with nonlinear optical properties of chalcogenide glasses These materials have many interesting structural properties some of which are useful for applications to integrated active optical devices This article presents a review of experimental measurements of nonlinear absorption coefficients and nonlinear refractive indices of such materials A review of various models formulated to explain their properties is also included The next article reviews the research on super resolution i e the possibility of overcoming the classical diffraction limit of about half a wavelength The problem is shown to be essentially equivalent to extrapolating the spatial frequency spectrum of the object beyond the spectral band of the optical system *Confocal and Two-Photon*

Quantum Optics VIII N.P. Bigelow, J.H. Eberly, C.R. Stroud Jr., I.A. Walmsley, 2012-12-06 The Eighth Rochester Conference on Coherence and Quantum Optics was held on the campus of the University of Rochester during the period June 13-16 2001 This volume contains the proceedings of the meeting The meeting was preceded by an affiliated conference the International Conference on Quantum Information with some overlapping sessions on June 13 The proceedings of the affiliated conference will be published separately by the Optical Society of America A few papers that were presented in common plenary sessions of the two conferences will be published in both proceedings volumes More than 268 scientists from 28 countries

participated in the week long discussions and presentations This Conference differed from the previous seven in the CQO series in several ways the most important of which was the absence of Leonard Mandel Professor Mandel died a few months before the conference A special memorial symposium in his honor was held at the end of the conference The presentations from that symposium are included in this proceedings volume An innovation that we believe made an important contribution to the conference was the inclusion of a series of invited lectures chaired by CQO founder Emil Wolf reviewing the history of the fields of coherence and quantum optics before about 1970 These were given by three prominent participants in the development of the field C Cohen Tannoudji 1 F Clauser and R I Glauber Time in Quantum Mechanics - Vol. 2 Gonzalo Muga, Andreas Ruschhaupt, Adolfo del Campo, 2010-01-13 But all the clocks in the city Began to whirr and chime O let not Time deceive you You cannot conquer Time W H Auden It is hard to think of a subject as rich complex and important as time From the practical point of view it governs and organizes our lives most of us are after all attached to a wrist watch or it helps us to wonderfully find our way in unknown territory with the global positioning system GPS More generally it constitutes the heartbeat of modern technology Time is the most precisely measured quantity so the second defines the meter or the volt and yet nobody knows for sure what it is puzzling philosophers artists priests and scientists for centuries as one of the enduring enigmas of all cultures Indeed time is full of contrasts taken for granted in daily life it requires sophisticated experimental and theoretical treatments to be accurately produced We are trapped in its web and it actually kills us all but it also constitutes the stuff we need to progress and realize our objectives There is nothing more boring and monotonous than the tick tock of a clock but how many fascinating challenges have physicists met to realize that monotony Quite a number of Nobel Prize winners have been directly motivated by them or have contributed significantly to time measurement
