Hanle, 2013-11-11 H J BEYER AND H KLEINPOPPEN During the preparation of Parts A and B of Progress in Atomic Spectroscopy a few years ago it soon became obvious that a comprehensive review and description of this field of modern atomic physics could not be achieved within the limitations of a two volume book While it was possible to include a large variety of spectroscopic methods inevitably some fields had to be cut short or left out altogether Other fields have developed so rapidly that they demand full cover in an additional volume One of the major problems already encountered during the preparation of the first volumes was to keep track of new developments and approaches which result in spectroscopic data We have to look far beyond the area of traditional atomic spectroscopy since methods of atomic and ion collision physics nuclear physics and even particle physics all make important contributions to our knowledge of the static and dynamical state of atoms and ions and thereby greatly add to the continuing fascination of a field of research which has given us so much fundamental knowledge since the middle of the last century In this volume we have tried to strike a balance between contributions belonging to the more established fields of atomic structure and spectroscopy and those fields where atomic spectroscopy overlaps with other areas Monte Carlo in Heavy Charged Particle Therapy Pablo Cirrone, Giada Petringa, 2024-01-26 This book explores the current difficulties and unsolved problems in the field of particle therapy and after analysing them discusses how and if innovative Monte Carlo approaches can be used to solve them Each book chapter is dedicated to a different sub discipline including multi ion treatments flash radiotherapy laser accelerated beams nanoparticles effects binary reactions to enhance radiobiology and space related issues This is the first book able to provide a comprehensive insight into this exciting field and the growing use of Monte Carlo in medical physics It will be of interest to graduate students in medicine and medical physics in addition to researchers and clinical staff Key Features Explores the exciting and interdisciplinary topic of Monte Carlo in particle therapy and medicine Addresses common challenges in the field Edited by an authority on the subject with chapter contributions from specialists **Progress in Physics, vol. 4/2010** Dmitri Rabounski , Florentin Smarandache, Larissa Borissova, Progress in Physics has been created for publications on advanced studies in theoretical and experimental physics including related themes from
