Progress in Phycological Research Frank Eric Round, David J. Chapman, 1999-10 *Progress in Phycological Research*. Vol. 3 F. E. Round, 1984 **Progress in Phycological Research /F. E. Round and D. J. Chapman** ,1982 **Progress in Phycological Research** Frank Eric Round, David J. Chapman, 1983 *Progress in Phycological Research*. V.1 (1982)- David J. Chapman, Frank Eric Round, 1982 **Biology and biochemistry of host-pathogen interactions in marine brown algae** Frithjof Christian Küpper, 2020-10-13 Associations of marine algae with symbiotic or parasitic microorganisms are ubiquitous phenomena known for a long time However there is an almost complete lack of knowledge on details of such interactions The intention of this study is to use the potentials of modern biological and biochemical techniques in order to analyze the reaction of brown algal hosts to the attack by pathogens and epibionts A 3 year field study at different localities on the European Atlantic coast revealed that *Pylaiella littoralis* populations were subject to massive epidemics of the parasites *Eurychasma dicksonii* *Chytridium polysiphoniae* and *Anisolpidium rosenvingei* Laboratory cultures were used to investigate the association of *Eurychasma* and *Chytridium* with brown algal hosts from different taxonomic groups *Eurychasma* has a much broader host range than *Chytridium* comprising members of all brown algal orders investigated and it tolerates a wider range of temperatures than the latter Phylogenetic studies based upon 18 S rRNA genes revealed that *Eurychasma dicksonii* belongs to the Oomycota branching at an ancestral position between terrestrial plant pathogens and free living members of the marine heterotrophic picoplankton *Chytridium polysiphoniae* a fungus appears more closely related to the genera *Rhizophydium* and *Spizellomyces* *Chytridiomycota* than to other known *Chytridium* species *Chytridium* produces chitin whilst *Eurychasma* does not Early stages of *Eurychasma* infection have a rather modest effect on host physiology The photosynthetic capacity is enhanced suggesting a temporary stimulation of host metabolism for hypertrophic growth *Chytridium* in contrast has an immediate detrimental effect on host photosynthesis which breaks down once a cell is infected leading to the rapid death of infected cells *Using The Biological Literature* Diane Schmidt, Elisabeth B. Davis, 2001-12-06 Provides an in depth review of current print and electronic tools for research in numerous disciplines of biology including dictionaries and encyclopedias method guides handbooks on line directories and periodicals Directs readers to an associated Web page that maintains the URLs and annotations of all major Internet resources discussed in the *Progress in Phycological Research* Frank Eric Round, D. J. Chapman, 1987 **Biological Oceanography** Charles B. Miller, 2009-04-01 This modern textbook of biological oceanography is aimed at students taking oceanography marine biology and marine sciences courses It covers recent developments such as the molecular techniques including sequence data that have allowed examination of the ocean's microbial ecology and the role of the various trophic groups in biogeochemical cycling carbon flow and climate control Major topics covered include phytoplankton bloom microbial food web marine biogeography global climate change and an overview of fisheries oceanography Difficult concepts are explained in a
