Progress In Sensory Physiology 1:

Progress in Sensory Physiology ,2012-12-06 **Progress in Sensory Physiology 9** ,2012-12-06 Sympathetic afferent fibers originate from a visceral organ course in the thoracolumbar rami communicantes have cell bodies located in dorsal root ganglia and terminate in the gray matter of the spinal cord Sympathetic afferent fibers from the heart transmit information about noxious stimuli associated with myocardial ischemia i e angina pectoris Previous reviews have described the characteristics of cardiovascular sympathetic afferent fibers Bishop et al 1983 Malliani 1982 This review summarizes that work and focuses on the neural mechanisms underlying the complexities of angina pectoris In order to understand anginal pain cells forming the classical pain pathway the spinothalamic tract STn were chosen for study These cells were chosen to address questions about anginal pain because they transmit nociceptive information of pain Antidromic conduction to brain regions that are involved in the perception activation of STT cells provided a means of identifying cells involved with transmission of nociceptive information in anesthetized animals Other ascending pathways may also transmit nociceptive information but many studies show that the STT plays an important role Visceral pain is commonly referred to overlying somatic structures The pain of angina pectoris can be sensed over a wide area of the thorax in the retrosternal precordial anterior thoracic and anterior cervical regions of the chest in the left or sometimes even the right shoulder arm wrist or hand or in the jaw and teeth Harrison and Reeves 1968 **Progress in Sensory Physiology** Hansjochem Autrum,David Ottoson,1981

Progress in sensory physiology ,1981 **Handbook of Affective Sciences** Richard J Davidson,Klaus R Sherer,H. Hill Goldsmith,2009-05-21 One hundred stereotype maps glazed with the most exquisite human prejudice especially collected for you by Yanko Tsvetkov author of the viral Mapping Stereotypes project Satire and cartography rarely come in a single package but in the Atlas of Prejudice they successfully blend in a work of art that is both funny and thought provoking The book is based on Mapping Stereotypes Yanko Tsvetkov's critically acclaimed project that became a viral Internet sensation in 2009 A reliable weapon against bigots of all kinds it serves as an inexhaustible source of much needed argumentation and occasionally as a nice slab of paper that can be used to smack them across the face whenever reasoning becomes utterly impossible The Complete Collection version of the Atlas contains all maps from the previously published two volumes and adds twenty five new ones wrapping the best selling series in a single extended edition **The Auditory Brainstem** D.R.F. Irvine,2012-12-06 **Tasting and Smelling** Gary K. Beauchamp,Linda Bartoshuk,1997-09-05 Tasting and Smelling presents a comprehensive overview to research on these two important modes of perception The book offers a review of research findings on the biophysics neurophysiology and psychophysics of both senses as well as discussing the emotional component associated with taste and smell and clinical disorders affecting each of these two senses Tasting and Smelling answers how odors and flavors are perceived why we have favorites and what happens when our senses go awry This book is of interest to the researcher in perception cognition or neurophysiology **The Neurobiology of Pain** Northern

Neurobiology Group (Great Britain). Symposium, 1984 Molecular Mechanisms in Visual Transduction D.G. Stavenga, W.J. de Grip, E.N. Pugh, 2000-11-30 Molecular mechanisms in visual transduction is presently one of the most intensely studied areas in the field of signal transduction research in biological cells. Because the sense of vision plays a primary role in animal biology and thus has been subject to long evolutionary development, the molecular and cellular mechanisms underlying vision have a high degree of sensitivity and versatility. The aims of visual transduction research are first to determine which molecules participate and then to understand how they act in concert to produce the exquisite electrical responses of the photoreceptor cells. Since the 1940s we have known that rod vision begins with the capture of a quantum of energy, a photon, by a visual pigment molecule, rhodopsin. As the function of photon absorption is to convert the visual pigment molecule into a G protein activating state, the structural details of the visual pigments must be explained from the perspective of their role in activating their specific G proteins. Thus Chapters 1-3 of this Handbook extensively cover the physico-chemical molecular characteristics of the vertebrate rhodopsins. Following photoconversion and G protein activation, the phototransduction cascade leads to modifications of the population of closed and open ion channels in the photoreceptor plasma membrane and thereby to the electrical response. The nature of the channels of vertebrate photoreceptors is examined in Chapter 4 and Chapter 5 integrates the present body of knowledge of the activation steps in the cascade into a quantitative framework. Once the phototransduction cascade is activated, it must be subsequently silenced. The various molecular mechanisms participating in inactivation are treated in Chapters 1-4 and especially Chapter 5. Molecular biology is now an indispensable tool in signal transduction studies. Numerous vertebrate Chapter 6 and invertebrate Chapter 7 visual pigments have been characterized and cloned. The genetics and evolutionary aspects of this great subfamily of G protein activating receptors are intriguing as they present a natural probe for the intimate relationship between structure and function of the visual pigments. Understanding the spectral characteristics from the molecular composition can be expected to **Invertebrate Vision** Eric Warrant, Dan-Eric Nilsson, 2006-10-05 Publisher description **Environmental Health Perspectives**, 1993 Brain-Gut Interactions Yvette Tache, David L. Wingate, 1991-02-22 Brain Gut Interactions serves as a reference source and stimulus for expanded research efforts aimed at unravelling the pathophysiology of brain gut interactions. Within the general framework of brain gut interactions, it covers the various areas in which this growing interdisciplinary field has evolved. Topics discussed in this volume include the topography and morphology of afferent and efferent connections between the gut and the medulla and hypothalamic nuclei; the role of afferent and efferent pathways in the regulation of gastrointestinal function; the brain's regulation of gastrointestinal secretory and motor function; and the function of peripheral and central cholecystikinin in the mechanisms of satiety. The final section of this book focuses on topics such as stress, emesis, visceral pain, and brain related disorders of the intestine based on experimental and clinical data. Students and investigators working with brain gut interactions, gastroenterologists, psychologists, and psychiatrists will find
