Strategic Supply Chain Management

Carlos Cordón, Kim Sundtoft Hald, Ralf W. Seifert, 2013-05-02 The supply chain is at the heart of every successful business organization's decision making process. This textbook explains how to create a winning supply chain management strategy by spotlighting how senior executives in European and US companies have turned their supply chains into strategic weapons designed to convert threats, risks, and outside pressures into competitive advantages. Strategic Supply Chain Management contains twenty real world cases, all of which have been field researched by a top author team and tested out in the classroom. Each case adopts an executive leadership perspective to illuminate the real dilemmas faced by managers. The authors draw on their extensive classroom and industry experience to ensure that the writing style is geared towards an executive education readership. This elite case package will provide a complete teaching resource and authentic learning experience for MBA and executive education classes in Supply Chain Management throughout the world.

Introduction to Project Management in Health Research Tim Usherwood, 1996-10-16 How do I plan my research in a systematic way in order to maximize my chances of obtaining funding and successfully answering my research question? How do I manage the project so that the research question is answered and the study objectives met on time and within budget? This book provides the answers to these queries and others that are frequently raised by first time researchers. It offers a straightforward and practical description of a systematic and structured approach to research project management. Recent years have seen a tremendous increase in research activity concerned with health and health care and employing methodologies derived from a wide range of disciplines including epidemiology, health economics and other social sciences. Many books have been published describing the methods of such research. However, research projects that run into difficulties rarely do so for methodological reasons but through poor project management. Typical problems include running over budget, differences of opinion with key stakeholders and missed completion deadlines. The aim of this book is to offer practical advice on the application to research of a range of project management processes including those of time and activity management, budgetary control, management of stakeholder relationships, product marketing. The book is aimed primarily at newcomers to health research and the intention is to describe a systematic and structured approach that will help to bring a research project to a successful conclusion.
