A Vulnerable System Andrew J. Stewart,2021-09-15 As threats to the security of information pervade the fabric of everyday life A Vulnerable System describes how even as the demand for information security increases the needs of society are not being met The result is that the confidentiality of our personal data the integrity of our elections and the stability of foreign relations between countries are increasingly at risk Andrew J Stewart convincingly shows that emergency software patches and new security products cannot provide the solution to threats such as computer hacking viruses software vulnerabilities and electronic spying Profound underlying structural problems must first be understood confronted and then addressed A Vulnerable System delivers a long view of the history of information security beginning with the creation of the first digital computers during the Cold War From the key institutions of the so called military industrial complex in the 1950s to Silicon Valley start ups in the 2020s the relentless pursuit of new technologies has come at great cost The absence of knowledge regarding the history of information security has caused the lessons of the past to be forsaken for the novelty of the present and has led us to be collectively unable to meet the needs of the current day From the very beginning of the information age claims of secure systems have been crushed by practical reality The myriad risks to

technology Stewart reveals cannot be addressed without first understanding how we arrived at this moment A Vulnerable System is an enlightening and sobering history of a topic that affects crucial aspects of our lives **The Government of Emergency** Stephen J. Collier, Andrew Lakoff, 2021-11-30 In the middle decades of the twentieth century in the wake of economic depression war and in the midst of the Cold War an array of technical experts and government officials developed a substantial body of expertise to contain and manage the disruptions to American society caused by unprecedented threats Today the tools invented by these mid twentieth century administrative reformers are largely taken for granted assimilated into the everyday workings of government As Stephen Collier and Andrew Lakoff argue in this book the American government's current practices of disaster management can be traced back to this era Collier and Lakoff argue that an understanding of the history of this initial formation of the emergency state is essential to an appreciation of the distinctive ways that the U S government deals with crises and emergencies or fails to deal with them today This book focuses on historical episodes in emergency or disaster planning and management Some of these episodes are well known and have often been studied while others are little remembered today The significance of these planners and managers is not that they were responsible for momentous technical innovations or that all their schemes were realized successfully Their true significance lies in the fact that they formulated a way of understanding and governing emergencies that has come to be taken for granted *Focus On: 100 Most Popular Fox Network Shows* Wikipedia contributors, *Focus On: 100 Most Popular Television Shows Set in New York City* Wikipedia contributors, *Focus On: 100 Most Popular Television Series by Universal Television* Wikipedia contributors, *Projects and Publications of the National Applied Mathematics Laboratories*, 1950 *The Loop* Jacob Ward, 2022-01-25 This eye opening narrative journey into the rapidly changing world of artificial intelligence reveals the dangerous ways AI is exploiting the unconscious habits of our minds and the real threat it poses to humanity The best book I have ever read about AI New York Times bestselling author Roger McNamee Artificial intelligence is going to change the world as we know it But the real danger isn't some robot that's going to enslave us It's our own brain Our brains are constantly making decisions using shortcuts biases and hidden processes and we're using those same techniques to create technology that makes choices for us In *The Loop* award winning science journalist Jacob Ward reveals how we are poised to build all of our worst instincts into our AIs creating a narrow loop where each generation has fewer predetermined and even dangerous choices Taking us on a world tour of the ongoing real world experiment of artificial intelligence *The Loop* illuminates the dangers of writing dangerous human habits into our machines From a biometric surveillance state in India that tracks the movements of over a billion people to a social media control system in China that punishes deviant friendships to the risky multiple choice simplicity of automated military action Ward travels the world speaking with top experts confronting the perils of their research Each stop reveals how the most obvious patterns in our behavior patterns an algorithm will use to make decisions about what's best for us are not the ones we want to perpetuate
