*Project Finance* Clifford Chance,Clifford Chance (Firm),1991 Global Project Finance, Human Rights and Sustainable Development Sheldon Leader,David Ong,2011-08-18 Many infrastructure projects around the world are funded through the project finance method which combines private financing with public sector backing from multilateral finance institutions such as the World Bank This examination of the theoretical and practical implications of such funding begins with a discussion of the relationship between the financial structuring of these projects and finance policy and legal disciplines especially in the form of investment law human rights and environmental law A number of case studies are then examined to provide practical insights into the application or otherwise of human rights and sustainable development objectives within such projects While these theoretical perspectives do not conclude that the project finance method detracts from the application or implementation of human rights and sustainable development objectives they do highlight the potential for the prioritisation of investment returns at the expense of human rights and environmental protection standards The Principles of Project Finance Mr Rod Morrison,2012-08-01

**Advance Asia's Infrastructure Development** Akash Deep, Jungwook Kim, Minsoo Lee, 2019-01-01 This publication highlights how public private partnerships PPPs can be effective to meet Asia's growing infrastructure needs. It shows how governments and their development partners can use PPPs to promote more inclusive and sustainable growth. The study finds that successful PPP projects are predicated on well designed contracts, a stable economy, good governance and sound regulations and a high level of institutional capacity to handle PPPs. It is the result of a collaboration between the Asian Development Bank, the Korea Development Institute and other experts that supported the theme chapter Sustaining Development through Public Private Partnership of the Asian Development Outlook 2017 Update

**Independent Power Projects in Developing Countries** Henrik M. Inadomi, 2010-01-01 For developing countries a stable and secure supply of electricity is crucial for development and for their populations well being. Since the early 1990s the main mechanism for constructing power generation facilities in developing countries has been the independent power project IPP model where a foreign investor enters into long term investment contracts with the national utility. This model has succeeded in attracting investment but raises complex regulatory and contractual challenges in addition to public concerns. This book drawing on project contracts, the author's interview sources, case law and literature analyzes in detail the legal investment protection used by IPP investors to ensure sufficient returns and protect their contracted revenue stream. The author examines how the model's corporate financial structure interlocks with strong contractual rights and with a number of measures used to improve the host country's creditworthiness in the short and long term including investment guarantees. The second part of the book identifies that the IPP model normally leads to six main consequences for the host developing country. The IPP model has led to private investment which has increased reliability, modernization and introduced private standards. It contains an intrinsic structural weakness in times of economic downturns. It has shown a tendency to lead to overinvestment in generation capacity. It has shown a tendency to lead to expensive and suboptimal solutions regarding choice of design and technology. The model and its institutional surroundings contain insufficient disincentives against moral hazard and exploitative behavior including corruption and The IPP model does not facilitate a further development of the host country's power sector. The author argues that these consequences for development can be improved without detrimentally compromising the private sector's willingness to continue to invest. While pursuing this analysis the author also explores such issues as the following: the web of parties and contracts constituting the IPP model including the model's risk allocation; an analysis of political risk including to what extent foreign investors also are protected against commercial and credit risks; the competing needs of predictability and flexibility in long term contracts; how investment arbitration tribunals have reacted both to the change in macroeconomic circumstances caused by the East Asian Crisis of 1997-98 and to numerable and credible allegations of corruption during procurement; identification of factors reducing or increasing the IPP model's

tendency to fail during severe economic recessions
