Projecting Science and Engineering Personnel Requirements for the 1990s United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Investigations and Oversight,1993 **Measurement and Statistics on Science and Technology** Benoît Godin,2004-08-02 How do we objectively measure scientific activities What proportion of economic activities should a society devote to research and development How can public sector and private sector research best be directed to achieve social goals Governments and researchers from industrial countries have been measuring science and technology for more than eighty years This book provides the first comprehensive account of the attempts to measure science and technology activities in Western countries and the successes and shortcomings of statistical systems Godin guides readers through the historical moments that led to the development of statistics on science and technology and also examines the socio political dynamics behind social measurement This enlightening account will be of interest to students and academics investigating science measurement as well as policy makers working in this burgeoning field Science, Money, and Politics Daniel S. Greenberg,2003-04-15 Greenberg explores how scientific research is funded in the United States including why the political process distributes the funds the way it does and how it can be corrupted by special interests in academia business and political machines **Pan-Organizational Summit on the U.S. Science and Engineering Workforce** Institute of Medicine,National Academy of Engineering,National Academy of Sciences,Government-Industry-University Research Roundtable,Marye Anne Fox,2003-12-10 Each of 32 nonprofit organizations contributing a presentation to the Pan Organizational Summit on the Science and Engineering Workforce November 11 12 2002 The National Academies Washington DC was invited to issue a corresponding position paper to be reproduced in this volume The bulk of this report comprises these papers In addition Shirley Jackson and Joseph Toole two of the keynote speakers have included their remarks **Summary of Activities of the Committee on Science, Space, and Technology, U.S. House of Representatives for the ... these roles are sometimes unknown to statistics students and even professional statisticians This book indicates some connections between statistics and public issues such as government policy or decision making public administration law and public debate This book describes examples of statistics in public policy areas as disparate as national defence AIDS diffusion DNA fingerprinting human rights violations and scientific manpower among other areas Although a small amount of statistical training is assumed a minimum of a half year of undergraduate level statistics the emphasis is on ideas rather than technical detail or mathematical generality This low technical content makes it accessible to not only statisticians but social scientists as well It will also be a useful resource for teachers of first year statistics

The Human Face of Global Mobility Adrian Favell, 2017-07-12 Alongside flows of trade and capital the free movement of professionals technical personnel and students is seen as a key aspect of globalization Yet not much detailed empirical research has been completed about the trajectories and experiences of these highly skilled or highly educated international migrants What little is known about these forms of global mobility and the politics that surround them contrasts with the

abundant theories and accounts of other types of international migration such as low income economic migration from less developed to core countries in the international political economy Drawing on the work of a long standing discussion group at the Center for Comparative and Global Research of UCLA s International Institute this collection bridges conventional methodological divides bringing together political scientists sociologists demographers and ethnographers It explores the reality behind assumptions about these new global migration trends It challenges widely held views about the elite characteristics of these migrants the costs and consequences of the brain drain said to follow from the migration of skilled workers the determinants of national policies on high skilled migrants and the presumed effortlessness of professional mobility in an integrating world The volume also sheds new light on international student migration the politics of temporary non immigrant workers in the United States new international forms of regulating movement and the realities of the everyday lives of multinational employees in the world s transnational cities Key differences between the regional contexts of this migration in Europe North America and the Asia Pacific are also emphasized
