Promethean Fire Reflections On The Origin Of Mind:

Promethean Fire Charles J. Lumsden, Edward O. Wilson, 1983 *A Celebration of Statistics* Anthony C. Atkinson, Stephen E. Fienberg, 2012-12-06 The International Statistical Institute was founded in 1885 and is therefore one of the world's oldest international scientific societies. The field of statistics is still expanding rapidly and possesses a rich variety of applications in many areas of human activity such as science, government, business, industry, and everyday affairs. In consequence, the celebration of the Institute's centenary in 1985 is of considerable interest not only to statisticians but also more widely to the international scientific community. As part of its centennial celebration, planning the Institute decided to publish a volume of papers representing the immensely wide range of interests encompassed by statistics in its international context, viewed both from a historical and from a contemporary standpoint. We were fortunate in securing the services of Anthony Atkinson and Stephen Fienberg as Editors of this volume; they have worked hard over a period of several years to put together a most fascinating collection of papers. On behalf of the Institute, it is my pleasant duty to thank them and the authors for their contributions. J. DURBIN, President, International Statistical Institute, Preface. The papers in this volume were prepared to help celebrate the centenary of the International Statistical Institute. During the ISI's first 100 years, statistics has matured both as a scientific discipline and as a profession in ways that the ISI's founders could not possibly have imagined. **Oracles of**

Science Karl Giberson, Mariano Artigas, 2009-02-27 *Oracles of Science* examines the popular writings of the six scientists who have been the most influential in shaping our perception of science: how it works and how it relates to other fields of human endeavor, especially religion. Biologists: Stephen Jay Gould, Richard Dawkins, and Edward O. Wilson; and physicists: Carl Sagan, Stephen Hawking, and Steven Weinberg. They have become public intellectuals articulating a much larger vision for science and what role it should play in the modern worldview. The scientific prestige and literary eloquence of each of these great thinkers combine to transform them into what can only be called oracles of science. Their controversial, often personal, sometimes idiosyncratic opinions become widely known and perceived by many to be authoritative. Curiously, the leading oracles of science are predominantly secular in ways that don't reflect the distribution of religious beliefs within the scientific community. Many of them are even hostile to religion, creating a false impression that science as a whole is incompatible with religion. Karl Giberson and Mariano Artigas offer an informed analysis of the views of these six scientists, carefully distinguishing science from philosophy and religion in the writings of the oracles. This book will be welcomed by many who are disturbed by the tone of the public discourse on the relationship between science and religion and will challenge others to reexamine their own preconceptions about this crucial topic. **Western Conceptions of the Individual** Brian

Morris, 2024-11-01 This is a comprehensive study of the varying conceptions of the human subject in the Western intellectual tradition. Although informed by an anthropological perspective, the author draws on material from all the major intellectual disciplines that have contributed to this tradition and offers biographical and theoretical vignettes of all the major Western

scholars By scrutinizing the classical texts of the Western tradition he succeeds in delineating the differing conceptions of the human individual which emerge from these writings and gives a guide to the most important ideas in Western cultural traditions

Human Freedom After Darwin John W. N. Watkins, 1999 Argues that philosophy of human freedom has been transformed by developments in science especially evolution The author accounts for freedom and creativity and tests his theory with examples from drug addiction hypnosis slavery brainwashing and creative leaps in thought

The Alphabet and the Brain Derrick de Kerckhove, Charles J. Lumsden, 2013-04-17 This book is a consequence of the suggestion that a major key to ward understanding cognition in any advanced culture is to be found in the relationships between processing orthographies language and thought In this book the contributors attempt to take only the first step namely to ascertain that there are reliable constancies among the interactions between a given type of writing and specific brain processes And among the possible brain processes that could be investigated only one apparently simple issue is being explored namely whether the lateralization of reading and writing to the right in fully phonemic alphabets is the result of formalized but essentially random occurrences or whether some physiological determinants are at play The original project was much more complicated It began with Derrick de Kerckhove's attempt to establish a connection between the rise of the alphabetic culture in Athens and the development of a theatrical tradition in that city from around the end of the 6th century B c to the Roman conquest The underlying assumption first proposed in a conversation with Marshall McLuhan was that the Greek alphabet was responsible for a fundamental change in the psychology of the Athenians and that the creation of the great tragedies of Greek theatre was a kind of cultural response to a condition of deep psychological crisis

Handbook of Evolutionary Psychology Charles Crawford, Dennis L. Krebs, 2013-03-07 Evolutionary psychology is concerned with the adaptive problems early humans faced in ancestral human environments the nature of psychological mechanisms natural selection shaped to deal with those ancient problems and the ability of the resulting evolved psychological mechanisms to deal with the problems people face in the modern world Evolutionary psychology is currently advancing our understanding of altruism moral behavior family violence sexual aggression warfare aesthetics the nature of language and gender differences in mate choice and perception It is helping us understand the relationship between cognitive science developmental psychology behavior genetics personality and social psychology Foundations of Evolutionary Psychology provides an up to date review of the ideas issues and applications of contemporary evolutionary psychology It is suitable for senior undergraduates first year graduate students or professionals who wish to become conversant with the major issues currently shaping the emergence of this dynamic new field It will be interesting to psychologists cognitive scientists and anyone using new developments in the theory of evolution to gain new insights into human behavior

Routledge International Handbook of Contemporary Social and Political Theory Gerard Delanty, Stephen P.

Turner, 2021-09-20 The triangular relationship between the social the political and the cultural has opened up social and political theory to new challenges The social can no longer be reduced to the category of society and the political extends beyond the traditional concerns of the nature of the state and political authority This Handbook will address a range of issues that have recently emerged from the disciplines of social and political theory focusing on key themes as opposed to schools of thought or major theorists It is divided into three sections which address the most influential theoretical traditions that have emerged from the legacy of the twentieth century the most important new and emerging frameworks of analysis today the major theoretical problems in recent social and political theory The Second edition is an enlarged revised and updated version of the first edition which was published in 2011 and comprised 42 chapters The new edition consists of 50 chapters of which seventeen are entirely new chapters covering topics that have become increasingly prominent in social and political theory in recent years such as populism the new materialism postcolonialism Deleuzian theory post humanism post capitalism as well as older topics that were not covered in the first edition such as Arendt the gift critical realism anarchism All chapters retained from the first edition have been thoroughly revised and updated The Routledge International Handbook of Contemporary Social and Political Theory encompasses the most up to date developments in contemporary social and political theory and as such is an essential research tool for both undergraduate and postgraduate students as well as researchers working in the fields of political theory social and political philosophy contemporary social theory and cultural theory

Marx's Ecology John Bellamy Foster, 2000-03 By reconstructing a materialist conception of nature and society Marx's Ecology challenges the spiritualism prevalent in the modern Green movement pointing toward a method that offers more lasting sustainable solutions to the ecological crisis

Sex Differences Yves Christen, 2011-12-31 Few people realize how much science can tell us about the differences between men and women Yves Christen provided the first comprehensive overview of research in this area when this classic book was first published in the 1990s He goes beyond simplistic biology is destiny arguments and constructs a convincing case for linking social and biological approaches in order to understand complex differences in behavior Biologists agree that the sexes differ in brain and body structure Christen links these differences in cerebral anatomy to differences in behavior and intellect Taking his readers on a journey through psychology endocrinology demography and many other fields Christen shows that the biological and the social are not antagonistic To the contrary social factors tend to exaggerate the biological rather than neutralize it This controversial work Sex Differences takes on traditional feminism for its refusal to confront the evidence on biologically determined sex differences Christen argues for a feminism that sees traits common to women in a positive light in the tradition of such early feminists as Clemence Royer and Margaret Sanger as well as more contemporary feminist sociobiologists like Sarah Hrdy We deny sex differences only at the price of scientific truth and our own self respect

Economic Democracy: The Political Struggle of

the 21st Century J. W. Smith, 2017-10-03 This title was first published in 1999 The author contends that economic democracy is the economic system the U S purports to have but has thus far failed to achieve because it like all the economic powers that have gone before seeks to control the economies of weaker nations It is the shocking lack of economic democracy and the efforts of so many to achieve it that fuels today s conflicts and will fuel those of the 21st century To show how and why this comprehensive work provides a detailed analysis of the history of numerous aspects of the development of the Neo Mercantilist world economy the geopolitical systems put in place by the developed world to manage and perpetuate that economy and the numerous proposals and modeling plans that have been offered over the years for the achievement of economic democracy

Skin Deep Gavin Evans, 2019-08-29 The dark heart of race science and why it s nonsense Racial differences are rooted in biological reality right That s certainly what a small group of anthropologists psychologists and pundits would have you believe Portraying themselves as brave defenders of the inconvenient truth this group took the revival of race science from alt right online message boards into mainstream academic journals They seek to justify raging social inequalities from poverty to incarceration rates with a simple message some people are just born to be poor There s just one problem race science isn t real The first Europeans had dark skin and black curly hair Culture was born in Africa not Western Europe Gavin Evans examines the latest research on how intelligence develops and laying out new discoveries in genetics palaeontology archaeology and anthropology to unearth the truth about our shared past Skin Deep stands up to the pseudo science deployed to justify colonial rule the apartheid regime and the vast inequalities that persist today As race dominates the political agenda it s time to put the hateful myths about it to bed

American Patriotism in a Global Society Betty Jean Craige, 1996-01-01 This book argues that the transformation of our world into a global society is causing a resurgence of tribalism at the same time that it is inspiring the ideology of political holism the understanding of human society as an evolving global system of interdependent individuals cultures and nations Betty Jean Craige examines the patriotic resistance to globalization in the United States by examining a number of recent historical events including the Persian Gulf War the 1988 presidential campaign and the Iran Contra scandal

Evolutionary Naturalism Michael Ruse, 1995-02-02 This is a collection of essays on the history and philosophy of evolutionary biology by the well known Canadian scholar Michael Ruse Much has been written newly for the collection as the author explores themes of evolutionary naturalism putting the theory of knowledge and of moral behaviour on a philosophical basis informed by contemporary evolutionary biology Divided into three parts the first set of essays considers issues in the history of science Darwin population biology and the new paleontological theory of punctuated equilibria attempting to find a path between the crude objectivity espoused by many working scientists and the rank relativism of post modernist critiques of science The second set of essays turns directly to the theory of knowledge epistemology arguing that the fact that we are evolved beings rather than objects of special creation must and does inform our thinking about the external world The third set of essays the most

controversial turns to questions of morality arguing that ethical systems are ultimately no more than collective illusions put in place by our biology because humans are essentially social animals Written in a clear and non technical fashion this collection carries forward debate on a number of controversial issues showing that the time has now come to take philosophy from the hands of academic theorists and to embrace fully the findings and consequences of modern science Handbook of Evolution Franz M. Wuketits, Christoph Antweiler, 2008-11-20 This two volume handbook is unique in spanning the entire field of evolution from the origins of life up to the formation of social structures and science and technology The author team of world renowned experts considers the subject from a variety of disciplines with continuous cross referencing so as to retain a logical internal structure The uniformly structured contributions discuss not merely the general knowledge behind the evolution of life but also the corresponding development of language society economies morality and politics The result is an overview of the history and methods used in the study of evolution including controversial theories and discussions A must for researchers in the natural sciences sociology and philosophy as well as for those interested in an interdisciplinary view of the status of evolution today **Evolutionary Psychology, Public Policy and Personal Decisions** Charles

Crawford, Catherine Salmon, 2004-05-20 During the last 15 years human sociobiology has metamorphosed into evolutionary psychology It is concerned with the social problems and stresses hominid and primate ancestors encountered the psychological mechanisms natural selection shaped to deal with these stresses and the way those ancient mechanisms work now Evolutionary psychologists are making great progress in expanding the understanding of human nature however this knowledge has had little impact on policymakers and legislators Supreme Court justices and managers seldom consult evolutionary psychologists to help with their deliberations When faced with private decisions few individuals ask themselves how a Darwinian perspective might help them This volume's aim is to start the process of using theory and findings of evolutionary psychology to help make the world a better place to live This book takes evolutionary psychology explicitly into applied areas in a way no other book has It includes a reasonable scope of applications from pornography to psychopaths and from morality to sex differences in the workplace An applications section provides concrete ideas for dealing with social and policy issues including chapters on women in the workplace rape and child support Providing good coverage of basic issues and theory of the field this book gives lay people and law policymakers appropriate background to fully understand the applications chapters Part II provides information on basic psychological mechanisms for group living including chapters on emotions reciprocity and legal reasoning and self deception that impact on how well public policy and law function The material in the first two sections provide an intellectual basis for the chapters in the third part of the book which deals with the application of evolutionary psychology to a variety of substantive areas related to public policy and personal decisions A political scientist concludes the book with a commentary on evolutionary psychology and public policy The book is designed to serve as a stand alone text in evolutionary psychology and public policy that can be used in a variety of disciplines such as

psychology social work law and psychology and public policy *Coevolution* William H. Durham, 1991 Charles Darwin's *On the Origins of Species* had two principal goals to show that species had not been separately created and to show that natural selection had been the main force behind their proliferation and descent from common ancestors In *Coevolution* the author proposes a powerful new theory of cultural evolution that is of the descent with modification of the shared conceptual systems we call cultures that is parallel in many ways to Darwin's theory of organic evolution The author suggests that a process of cultural selection or preservation by preference driven chiefly by choice or imposition depending on the circumstances has been the main but not exclusive force of cultural change He shows that this process gives rise to five major patterns or modes in which cultural change is at odds with genetic change Each of the five modes is discussed in some detail and its existence confirmed through one or more case studies chosen for their heuristic value the robustness of their data and their broader implications But *Coevolution* predicts not simply the existence of the five modes of gene culture relations it also predicts their relative importance in the ongoing dynamics of cultural change in particular cases The case studies themselves are lucid and innovative reexaminations of an array of oft pondered anthropological topics plural marriage sickle cell anemia blood color terms adult lactose absorption incest taboos headhunting and cannibalism In a general case the author's goal is to demonstrate that an evolutionary analysis of both genes and culture has much to contribute to our understanding of human diversity particularly behavioral diversity and thus to the resolution of age old questions about nature and nurture genes and culture Marxism and Human Sociobiology Boshu Zhang, 1994-01-01 In this book the author attempts to reveal the heart of a Chinese intellectual By attempting to scientifically historically and even practically examine the reasons behind the present state of Chinese social political economical and academic life
