Pronghorn Ecology And Management:

Pronghorn Bart W. O'Gara, James D. Yoakum, 2004 One of the fastest land animals on Earth second only to the cheetah the pronghorn can reach speeds of more than 50 miles per hour It also is one of the most fascinating of all animals For many people the pronghorn was nearly as much a symbol of the American West as was the bison for some it still is Eliminated from much of its historic range by the early 1900s this unique North American big game species has experienced a remarkable recovery and now is found throughout the western United States Canada and northern Mexico Thirty years in the making Pronghorn Ecology and Management contains the most comprehensive information on the behavior physiology migration taxonomy and management of this extraordinary animal Full chapters are devoted to distribution nutrition and food diseases and parasites ecosystem management hunting and much more The principal authors the world's preeminent pronghorn biologists Bart W O Gara and Jim D Yoakum conclude with a thorough discussion of the future of pronghorn and their management With 23 chapters that include contributions by 10 other wildlife professionals and more than 850 illustrations including original artwork by Edson Fichter and Daniel P Metz Pronghorn Ecology and Management is the definitive work on the species A Wildlife Management Institute Book

Some Aspects of Pronghorn Ecology and Management in

Northeastern California H. Salwasser, K. Shimamoto, 1979 Pronghorn Management Guides, 1993 **Rangeland**

Wildlife Ecology and Conservation Lance B. McNew, David K. Dahlgren, Jeffrey L. Beck, 2023-09-01 This open access book reviews the importance of ecological functioning within rangelands considering the complex inter relationships of production agriculture ecosystem services biodiversity and wildlife habitat More than half of all lands worldwide and up to 70% of the western USA are classified as rangelands uncultivated lands that often support grazing by domestic livestock The rangelands of North America provide a vast array of goods and services including significant economic benefit to local communities while providing critical habitat for hundreds of species of fish and wildlife This book provides compendium of recent data and synthesis from more than 100 experts in wildlife and rangeland ecology in Western North America It provides a current and in depth synthesis of knowledge related to wildlife ecology in rangeland ecosystems and the tools used to manage them to serve current and future wildlife biologists and rangeland managers in the working landscapes of the West The book also identifies information gaps and serves as a jumping off point for future research of wildlife in rangeland ecosystems While the content focuses on wildlife ecology and management in rangelands of Western North America the material has important implications for rangeland ecosystems worldwide

Habitat Management Guides for the American Pronghorn

Antelope James D. Yoakum, 1981 *Southwestern Desert Resources* William L. Halvorson, Cecil R. Schwalbe, Charles van Riper, 2023-01-10 The southwestern deserts stretch from southeastern California to west Texas and then south to central Mexico The landscape of this region is known as basin and range topography featuring to sky islands of forest rising from the desert lowlands which creates a uniquely diverse ecology The region is further complicated by an international border where

governments have caused difficulties for many animal populations This book puts a spotlight on individual research projects which are specific examples of work being done in the area and when they are all brought together to shed a general light of understanding the biological and cultural resources of this vast region so that those same resources can be managed as effectively and efficiently as possible The intent is to show that collaborative efforts among federal state agency university and private sector researchers working with land managers provides better science and better management than when scientists and land managers work independently

Fencing for Conservation Michael J. Somers, Matthew Hayward, 2011-11-23 The conflict between increasing human population and biodiversity conservation is one of the IUCN's key threatening processes Conservation planning has received a great deal of coverage and research as a way of conserving biodiversity yet while theoretically successful it has never been tested Simple lines on maps to illustrate conservation areas are unlikely to be successful in the light of human encroachment It may be that some form of overt display is necessary to ensure the protection of reserves This may be signage presence of guards rangers or physical fencing structures The need for some form of barrier goes beyond restricting human access The megafauna of Africa pose a genuine threat to human survival In southern Africa fences keep animals in and protect the abutting human population Elsewhere fencing is not considered important or viable Where poverty is rife it won't take much to tip the balance from beneficial conservation areas to troublesome repositories of crop raiders diseases and killers Conversely in New Zealand fences are used to keep animals out Introduced species have decimated New Zealand's endemic birds reptiles and invertebrates and several sites have been entirely encapsulated in mouse proof fencing to ensure their protection Australia faces the same problems as New Zealand however surrounds its national parks with cattle fences Foxes and cats are free to enter and leave at will resulting in rapid recolonisation following poisoning campaigns How long will these poison campaigns work before tolerance aversion or resistance evolves in the introduced predator populations
