Adapting Proofs-as-Programs Iman Poernomo,John N. Crossley,Martin Wirsing,2007-04-27 This monograph details several important advances in the direction of a practical proofs as programs paradigm which constitutes a set of approaches to developing programs from proofs in constructive logic with applications to industrial scale complex software engineering problems One of the books central themes is a general abstract framework for developing new systems of programs synthesis by adapting proofs as programs to new contexts *Kompendium der koronaren Herzkrankheit* Fred Sesto,1988 Logic Based Program Synthesis and Transformation Kung-Kiu Lau,2003-06-29 **Logic-Based Program Synthesis and Transformation** Andy King,Andrew Malcolm King,2008-03-18 This book constitutes the thoroughly refereed postproceedings of the 17th International Symposium on Logic Based Program Synthesis and Transformation LOPSTR 2007 held in Kongens Lyngby Denmark August 23 24 2007 colocated with SAS 2007 The 13 revised full papers presented together with one invited talk were carefully selected and revised from 30 submissions during two rounds of reviewing and improvement The papers are organized in topical sections on program termination program transformation constraint solving and analysis as well as software engineering **Formal Methods and Software Engineering** Jin Song Dong,Huibiao Zhu,2010-11-09 This book constitutes the refereed proceedings of the 12th InternationalConference on Formal Engineering Methods ICFEM 2010 held in Shanghai China November 2010 The 42 revised full papers together with 3 invited talks presented were carefully reviewed and selected from 114 submissions The papers address all current issues in formal methods and their applications in software engineering They are organized in topical sections on theorem proving and decision procedures web services and workflow verification applications of formal methods probability and concurrency program analysis model checking object orientation and model driven engineering as well as specification and verification

can be stored in repositories as reusable assets where they can be managed discovered and reused There is also a need to chain and combine model transformations in order to produce new and more powerful transfor tions and to be able to implement new operations on models Finally model transformations need methodology support i e they need to be integrated into software development methodologies supported by appropriate tools and en ronments These issues and concerns de ne the focus of these proceedings   Logic, Language, Information and Computation Wilfrid Hodges,Ruy de Queiroz,2008-06-19 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the 4th volume of the FoLLI LNAI subline containing the refereed proceedings of the 15th International Workshop on Logic Language Information and Computation WoLLIC 2008 held in Edinburgh UK in July 2008 The 21 revised full papers presented together with the abstracts of 7 tutorials and invited lectures were carefully reviewed and selected from numerous submissions The papers cover all pertinent subjects in computer science with particular interest in cross disciplinary topics Typical areas of interest are foundations of computing and programming novel computation models and paradigms broad notions of proof and belief formal methods in software and hardware development logical approach to natural language and reasoning logics of programs actions and resources foundational aspects of information organization search flow sharing and protection   *Numerical Geometry of Non-Rigid Shapes* Alexander M. Bronstein,Michael M. Bronstein,Ron Kimmel,2008-09-18 Deformable objects are ubiquitous in the world surrounding us on all levels from micro to macro The need to study such shapes and model their behavior arises in a wide spectrum of applications ranging from medicine to security In recent years non rigid shapes have attracted growing interest which has led to rapid development of the field where state of the art results from very different sciences theoretical and numerical geometry optimization linear algebra graph theory machine learning and computer graphics to mention several are applied to find solutions This book gives an overview of the current state of science in analysis and synthesis of non rigid shapes Everyday examples are used to explain concepts and to illustrate different techniques The presentation unfolds systematically and numerous figures enrich the engaging exposition Practice problems follow at the end of each chapter with detailed solutions to selected problems in the appendix A gallery of colored images enhances the text This book will be of interest to graduate students researchers and professionals in different fields of mathematics computer science and engineering It may be used for courses in computer vision numerical geometry and geometric modeling and computer graphics or for self study   Logic-based Program Synthesis and Transformation / ,2000   **Software Configuration Management Using Vesta** Clark Allan Heydon,Roy Levin,Timothy P. Mann,Yuan Yu,2010-06-07 The core technologies underlying software configuration managementhave changed little in more than two decades Developmentorganizations struggle to manage ever larger software systems with tools that were never designed to handle them Their development processes are warped by the inadequacies of their building and version management tools Developers must take time from writing and debugging code to cope with the operational

problems thrust upon them by their build system s inade quate support of large scale concurrent development Vesta a novel system for large scale software configuration management offers a better solution Through a unique integration of building and version management facilities Vestaconstructs software of any size repeatably incrementally and consis tently Since modem software development occurs worldwide Vesta supports con current multi site distributed development Vesta s core facilities are methodologi cally neutral allowing development organizations a wide range of flexibility in the way they arrange their code repositories and structure the building of system com ponents In short Vesta advances the state of the art in configuration management **Foundations of Software Science and Computation Structures** Bart Jacobs,Christof Löding,2016-03-22 This book constitutes the proceedings of the 19th International Conference on Foundations of Software Science and Computation Structures FOSSACS 2016 which took place in Eindhoven The Netherlands in April 2016 held as Part of the European Joint Conferences on Theory and Practice of Software ETAPS 2016 The 31 full papers presented in this volume were carefully reviewed and selected from 85 submissions They were organized in topical sections named types recursion and fixed points verification and program analysis automata logic games probabilistic and timed systems proof theory and lambda calculus algorithms for infinite systems and monads **Proceedings of the 7th & 8th Asian Logic Conferences** Rod Downey,2003 The 7th and the 8th Asian Logic Conferences belong to the series of logic conferences inaugurated in Singapore in 1981 This meeting is held once every three years and rotates among countries in the Asia Pacific region with interests in the broad area of logic including theoretical computer science It is now considered a major conference in this field and is regularly sponsored by the Association for Symbolic Logic This book contains papers many of them surveys by leading experts of both the 7th meeting in Hsi Tou Taiwan and the 8th in Chongqing China The volume planned for the 7th meeting was interrupted by the earthquake in Taiwan and the decision was made to combine the two proceedings The 8th conference is also the ICM2002 Satellite Conference on Mathematical Logic **Parsing Techniques** Dick Grune,Ceriel J.H. Jacobs,2007-10-29 Parsing also referred to as syntax analysis has been and continues to be an essential part of computer science and linguistics Today parsing techniques are also implemented in a number of other disciplines including but not limited to document preparation and conversion typesetting chemical formulae and chromosome recognition This second edition presents new developments and discoveries that have been made in the field Parsing techniques have grown considerably in importance both in computational linguistics where such parsers are the only option and computer science where advanced compilers often use general CF parsers Parsing techniques provide a solid basis for compiler construction and contribute to all existing software enabling Web browsers to analyze HTML pages and PostScript printers to analyze PostScript Some of the more advanced techniques are used in code generation in compilers and in data compression In linguistics the importance of formal grammars was recognized early on but only recently have the corresponding parsing techniques been applied Also their importance as general pattern recognizers is slowly being

acknowledged This text Parsing Techniques explores new developments such as generalized deterministic parsing linear time substring parsing parallel parsing parsing as intersection non canonical methods and non Chomsky systems To provide readers with low threshold access to the full field of parsing techniques this new edition uses a two tiered structure The basic ideas behind the dozen or so existing parsing techniques are explained in an intuitive and narrative style and problems are presented at the conclusion of each chapter allowing the reader to step outside the bounds of the covered material and explore parsing techniques at various levels The reader is also provided with an extensive annotated bibliography as well as hints and partial solutions to a number of problems In the bibliography hundreds of realizations and improvements of parsing techniques are explained in a much terser yet still informal style improving its readability and usability The reader should have an understanding of algorithmic thinking especially recursion however knowledge of any particular programming language is not required **Types for Proofs and Programs** Stefano Berardi,Mario Coppo,Ferruccio Damiani,2004-05-17 These proceedings contain a selection of refereed papers presented at or related to the 3rd Annual Workshop of the Types Working Group Computer Assisted Reasoning Based on Type Theory EU IST project 29001 which was held d ing April 30 to May 4 2003 in Villa Gualino Turin Italy The workshop was attended by about 100 researchers Out of 37 submitted papers 25 were selected after a refereeing process The nal choices were made by the editors Two previous workshops of the Types Working Group under EU IST project 29001 were held in 2000 in Durham UK and in 2002 in Berg en Dal close to Nijmegen The Netherlands These workshops followed a series of meetings organized in the period 1993 2002 within previous Types projects ESPRIT BRA 6435 and ESPRIT Working Group 21900 The proceedings of these e lier workshops were also published in the LNCS series as volumes 806 996 1158 1512 1657 2277 and 2646 ESPRIT BRA 6453 was a continuation of ESPRIT Action 3245 Logical Frameworks Design Implementation and Ex riments Proceedings for annual meetings under that action were published by Cambridge University Press in the books Logical Frameworks and Logical Environments edited by G Huet and G Plotkin We are very grateful to the members of the research group Semantics and Logics of Computation of the Computer Science Department of the University of Turin who helped organize the Types 2003 meeting in Torino Programming Languages and Systems Sukyoung Ryu,2018-11-22 This book constitutes the proceedings of the 16th Asian Symposium on Programming Languages and Systems APLAS 2018 held in Wellington New Zealand in December 2018 The 22 papers presented in this volume were carefully reviewed and selected from 51 submissions They are organized in topical sections named types program analysis tools functional programs and probabilistic programs verification logic and continuation and model checking Typed Lambda Calculi and Applications Simona Ronchi Della Rocca,2007-07-11 This book constitutes the refereed proceedings of the 8th International Conference on Typed Lambda Calculi and Applications TLCA 2007 held in Paris France in June 2007 in conjunction with RTA 2007 the 18th International Conference on Rewriting Techniques and Applications as part of RDP 2007 the 4th International Conference on Rewriting Deduction and Programming

The 25 revised full papers presented together with 2 invited talks were carefully reviewed and selected from 52 submissions The papers present original research results that are broadly relevant to the theory and applications of typed calculi and address a wide variety of topics such as proof theory semantics implementation types and programming
