is the branch of horticulture which deals with the deliberate production of new plants using various starter materials e.g. organs/tissues including their intensive but temporary care. It is primarily practiced to produce seedlings or clones of nursery crops for out-planting or for planting in containers for display or decor or other uses. This book deals with the propagation of fruit and plantation crops of spice and medicinal plants. The book is aimed at post-graduate horticultural students, researchers and horticulturists. Propagation of Horticultural Crops R. R. Sharma, 2016. It is a comprehensive book on propagation of horticultural crops which covers the principles, theory and practices in brief and simple language. Special emphasis has been given on seed propagation and nursery management. Similarly, a due attention has been paid to include some important chapters such as hybrid seed production, plastics in plant propagation, rejuvenation of old orchards, chemicals and plant bioregulators, modern techniques of raising annuals etc. It is hoped that this book would be of great help to the UG/PG students, researchers, teachers, extension workers and alike in the field of horticulture.

Innovation in Propagation of Fruit, Vegetable and Ornamental Plants Sergio Ruffo Roberto, 2020-11-04. In horticulture, plant propagation plays an important role as the number of plants can be rapidly multiplied, retaining the desirable characteristics of the mother plants and shortening the bearing age of plants. There are two primary forms of plant propagation: sexual and asexual. In nature, the propagation of plants most often involves sexual reproduction, and this form is still used in several species. Over the years, horticulturists have developed asexual propagation methods that use vegetative plant parts. Innovation in plant propagation has supported breeding programs and allowed the production of high-quality nursery plants with the same genetic characteristics of the mother plant, free of diseases or pests. **Acta Horticulturae**, 2001. **Modern Plant Propagation** Allan Gardiner, 1988. This extensively illustrated handbook covers all propagation methods, step by step, including propagating soil mediums, use of rooting promoting substances, potting mixtures, techniques for potting up and potting on, post-propagation care, equipment innovations. There is advice about seed collection, storage and stratification, a guide to all vegetative propagating techniques, division, separation, layering as well as cuttings of all sorts from softwood, semi-ripe and hardwood through to bud, leaf and root, a detailed guide to all grafting methods, budding and a brief introduction to micropropagation. Specific propagating advice is given for a thoroughly comprehensive listing of plants, both exotic and Australian trees, shrubs, climbers, house plants, ferns, orchids, orchard plants. **Propagation Of Horticultural Crops (principles & Practices)** R. R. Sharma, 2005-01-01.

Plant Propagation Hudson Thomas Hartmann, Dale E. Kester, 1975. Presents complete coverage of all phases of plant propagation by seeds, cuttings, grafting, budding, layering, division and tissue culture propagation. **Plant Propagation by Tissue Culture** Edwin F. George, Michael A. Hall, Geert-Jan De Klerk, 2007-10-24. For researchers and students, George's books have become the standard works on in vitro plant propagation. For this, the third edition of the classic work, authors with specialist knowledge have been brought on board to cover the hugely expanded number of topics in the subject area. Scientific knowledge has expanded rapidly since the second edition and it would now be a daunting task for

a single author to cover all aspects adequately However this edition still maintains the integration that was characteristic of the previous editions The first volume of the new edition highlights the scientific background of in vitro propagation The second volume covers the practice of micropropagation and describes its various applications **Hartmann & Kester's Plant Propagation** Hudson Thomas Hartmann,2011 Issues of sustainability and preserving our natural resources consistently rank among the most important concerns to our customers To help do our part Pearson is implementing the following eco friendly initiatives to our publishing program Adoption of Tissue Culture in Horticulture Ch. Krishna Rao,2014-03-17 Society provides human physical and cultural resources for the growth and development of science and technology In turn developments in science and technology influence society As such technology and society are obviously in a reciprocal relationship and all social institutions are affected by technology Understanding the influence of technology in bringing about social change has assumed greater significance in current sociological research given the development of technological advances such as information technology and biotechnology In this context this book provides an understanding of the influence of the adoption of tissue culture one of the techniques of biotechnology on the social organization of production and of social relations in the production process including attitudes knowledge and practices associated with the cultivation of fruit crops which have been commercially important in the context of increasing demand for fruit The book deals with one of the most commercially successful biotechnologies plant tissue culture technology PTC in horticulture The sociological study of the social economy of crops has recently gained significance in studies concerned with science technology and society STS studies This book is unique in its examination of the nature of the adoption of plant tissue culture technology by farmers and of issues concerning PTC technology at the micro level
