Properties Of Mercury Cadmium Telluride:

Properties of Mercury Cadmium Telluride John Chadwick Brice, Peter Capper, 1987 **Mercury Cadmium Telluride**
Peter Capper, James Garland, 2011-06-20 Mercury cadmium telluride MCT is the third most well regarded semiconductor after silicon and gallium arsenide and is the material of choice for use in infrared sensing and imaging The reason for this is that MCT can be tuned to the desired IR wavelength by varying the cadmium concentration Mercury Cadmium Telluride Growth Properties and Applications provides both an introduction for newcomers and a comprehensive review of this fascinating material Part One discusses the history and current status of both bulk and epitaxial growth techniques Part Two is concerned with the wide range of properties of MCT and Part Three covers the various device types that have been developed using MCT Each chapter opens with some historical background and theory before presenting current research Coverage includes Bulk growth and properties of MCT and CdZnTe for MCT epitaxial growth Liquid phase epitaxy LPE growth Metal organic vapour phase epitaxy MOVPE Molecular beam epitaxy MBE Alternative substrates Mechanical thermal and optical properties of MCT Defects diffusion doping and annealing Dry device processing Photoconductive and photovoltaic detectors Avalanche photodiode detectors Room temperature IR detectors **Transport Properties of Mercury Cadmium Telluride by Infrared Reflectance** Charlotte Ann Tatsch, 1989 **Physics and Chemistry of Mercury Cadmium Telluride and Novel IR Detector Materials** David G. Seiler, 1991 **Properties of Narrow Gap Cadmium-based Compounds** Peter Capper, 1994 This highly structured volume contains sections on growth and device aspects of mercury cadmium telluride MCT **Proceedings of the US Workshop on the Physics and Chemistry of Mercury Cadmium Telluride**, 1983 **Assessment of Mercury-cadmium Telluride Materials Technology**, 1982
 Properties of Electrodeposited Mercury Cadmium Telluride as a Solar Cell Material Mark S. Marychurch, 1991
 Properties of Mercury-Cadmium-Telluride Solid Solutions Robert F. Brebrick, MARQUETTE UNIV MILWAUKEE WI DEPT OF MECHANICAL ENGINEERING., 1983 Measurements of the partial pressures in the mercury cadmium tellurium system are indicated The thermodynamic analysis of this system is briefly sketched References to detailed accounts of these results are cited There now exist sufficient data that this system is to a large extent thermodynamically characterized Moreover a thermodynamic model has been established that allows a quantitative reproduction of essentially all of what appears to be the reliable phase diagram partial pressure and general thermodynamic data Author **Physics and Chemistry of Mercury Cadmium Telluride and Novel Infrared Detector Materials** David G. Seiler, 1991 **Proceedings of the 1987 U.S. Workshop on the Physics and Chemistry of Mercury Cadmium Telluride**, 1988 **Mercury Cadmium Telluride Imagers** A.C. Onshage, 1997-06-18 In two parts this book describes the evolution of mercury cadmium telluride HgCdTe imager structures based upon published patents and patent applications The first part covers monolithic arrays and the second part describes hybrid arrays Each part has 5 chapters with each document placed in chronological order with the

documents with the earliest priority placed first Focus has been directed at the steps of manufacturing and structures of imagers There is an index at the end of the book containing the patent number the name of the applicant and the date of publication of each cited document This monograph will serve as a useful summary of the patents and patent applications in the field of mercury cadmium telluride imagers

Theory of the Electronic Properties of Mercury-Cadmium-Telluride Alloys A. B. Chen, A. Sher, AUBURN UNIV AL., 1984 An accurate band structure theory for semiconductor alloys was achieved It has been successfully applied to Mercury Cadmium Telluride alloys MCT and is being extended to III V and other II VI semiconductor alloys As a result of this research ten papers have been published Several other papers and one book are in progress The most important finding was the origin of the major disorder and its effects on different parts of the band structure The large s energy fluctuation between the Hg and Cd sites was found to cause a large smearing in the density of states about 5 eV below the top of the valence band but it produced very little bowing and scattering for the states near the band gap A detailed study of these facts accounts for the lattice instability of MCT and its very high electron mobility Another significant result is that while Cd weakens a neighboring Hg Te bond Zn strengthens it Such structural studies may help resolve the adverse structural difficulties affecting MCT as an infrared material

The Spectroscopy of Semiconductors, 1992-07-31 Spectroscopic techniques are among the most powerful characterization methods used to study semiconductors This volume presents reviews of a number of major spectroscopic techniques used to investigate bulk and artificially structured semiconductors including photoluminescence photo reflectance inelastic light scattering magneto optics ultrafast work piezo spectroscopy methods and spectroscopy at extremely low temperatures and high magnetic fields Emphasis is given to major semiconductor systems and artificially structured materials such as GaAs InSb Hg_{1-x}Cd_xTe and MBE grown structures based upon GaAs AlGaAs materials Both the spectroscopic novice and the expert will benefit from the descriptions and discussions of the methods principles and applications relevant to today's semiconductor structures Key Features Discusses the latest advances in spectroscopic techniques used to investigate bulk and artificially structured semiconductors Features detailed review articles which cover basic principles Highlights specific applications such as the use of laser spectroscopy for the characterization of GaAs quantum well structures
