Kapoor, Satwanti Kapoor, 1994 The present volume emphasizes the importance of studying the structure and functioning of ecological systems and their mode of reaction on exposure to human intervention in the Himalayas It stresses the impact of man on his environment and vice versa considered in the areas of biological and adaptative entity as well as a social cultural and economic being

River Ecology and Man Ray T. Oglesby, Carolus Axelius Carlson, James A. McCann, University of Massachusetts at Amherst, 1972 *The Ecology, Exploitation and Conservation of River Turtles* Don Moll, Edward O. Moll, 2004-04-08 The underlying theme of this book is that a widespread taxonomically diverse group of animals important both from ecological and human resource perspectives remains poorly understood and in decline while receiving scant attention from the ecological and conservation community This volume proposes a comprehensive overview of the world s river turtles ecology conservation and management It begins with a categorization of taxa which inhabit flowing water habitats followed by information on their evolutionary and physical diversity and biogeography Within the framework of ecology the authors discuss the composition of river turtle communities in different types of lotic habitats and regions population dynamics movements reproductive characteristics and behavior predators and feeding relationships In a conservation and management section the authors identify and evaluate the nature and intensity of factors which threaten river turtle survival almost all of which involve direct human exploitation or indirect effects of human induced habitat alteration and degradation They then list and evaluate the various schemes which have been proposed or employed to halt declines and restore populations and make recommendations for future management plans for specific species and regions In closing they state their viewpoint concerning future research directions and

priorities and an evaluation of future prospects for survival of the world's river turtle species

Man and River Systems Josselin Garnier, J.-M. Mouchel, 2013-04-17 The volume focuses on the ecological functioning of rivers which has received less attention than functioning of lakes and reservoirs. The selected papers cover a large range of topics relating to aquatic communities, eutrophication, nutrient dynamics and organic pollution, erosion and sediment transport and fate of micropollutants at the basin scale. Integrated approaches developed in order to study the ecological functioning of fluvial systems perturbed by human activity are presented. This functioning is analysed from the point of view of fundamental research but insights into system management are not neglected. This book will be of interest to researchers in the field of aquatic ecology, river system functioning and water surface pollution to postgraduate students to the institutions involved in water resource management and to the drinking water and waste water treatment industries. It draws information from many large river systems in the world.

**The Rivers Handbook** Peter P. Calow, Geoffrey E. Petts, 2009-07-08 Fast changing legislation and increasing environmental awareness within the non scientific community demands that the modern approach to the management of rivers and water resources should be based on a sound understanding and application of the scientific and ecological principles that underlie freshwater processes. In two volumes. The Rivers Handbook offers an expert and exhaustive insight into the principles, methods and tools of modern river management always within an integrated and environmentally acceptable framework. This second volume develops the principles and philosophies expounded in the first volume into the management sphere, organizing the approach around problems, diagnosis and treatment. A fully comprehensive reference to sound methods of modern river management. The ideal information resource for all river managers.

River and Stream Ecosystems of the World Colbert E. Cushing, Kenneth W. Cummins, G. Wayne Minshall, 2006-02-06 This is a synopsis and review of the major rivers of the world.

Comparative Reservoir Limnology and Water Quality Management M. Straskraba, J.G. Tundisi, A. Duncan, 2013-03-09 The volume starts with comparative reservoir limnology and deals with problems relating to tropical, semi arid and temperate reservoirs. The second part concerns mathematical models of reservoirs including new techniques for investigating their limnology. These cover physical, chemical and biological phenomena, remote sensing and the use of modelling to establish the most efficient strategy for water quality sampling. In the third on reservoir water quality management, the potential available in fish population management for bio-manipulation of reservoir water quality is introduced. Also included is a valuable section on a wide range of water quality measures coming from the well known Czech Hydrobiological Laboratory. Finally the editors summarise the present state of reservoir limnology. This book will be of interest to hydrobiologists and aquatic ecologists, reservoir and sanitary engineers, fisheries officers.
