**A SAS/IML Companion for Linear Models** Jamis J. Perrett, 2009-12-12 Linear models courses are often presented as either theoretical or applied Consequently students may find themselves either proving theorems or using high level procedures like PROC GLM to analyze data There exists a gap between the derivation of formulas and analyses that hide these formulas behind attractive user interfaces This book bridges that gap demonstrating theory put into practice Concepts presented in a theoretical linear models course are often trivialized in applied linear models courses by the facility of high level SAS procedures like PROC MIXED and PROC REG that require the user to provide a few options and statements and in return produce vast amounts of output This book uses PROC IML to show how analytic linear models formulas can be typed directly into PROC IML as they were presented in the linear models course and solved using data This helps students see the link between theory and application This also assists researchers in developing new methodologies in the area of linear models The book contains complete examples of SAS code for many of the computations relevant to a linear models course However the SAS code in these examples automates the analytic formulas The code for high level procedures like PROC MIXED is also included for side by side comparison The book computes basic descriptive statistics matrix algebra matrix decomposition likelihood maximization non linear optimization etc in a format conducive to a linear models or a special topics course Also included in the book is an example of a basic analysis of a linear mixed model using restricted maximum likelihood estimation REML The example demonstrates tests for fixed effects estimates of linear functions and contrasts The example starts by showing the steps for analyzing the data using PROC IML and then provides the analysis using PROC MIXED This allows students to follow the process that lead to the output      SAS for Linear Models, Fourth Edition, 4th Edition Ph Freund, Ph Stroup, Ph Littell, 2002 This clear and comprehensive guide provides everything you need for powerful linear model analysis Using a tutorial approach and plenty of examples authors Ramon Littell Walter Stroup and Rudolf Freund lead you through methods related to analysis of variance with fixed and random effects You will learn to use the appropriate SAS procedure for most experiment designs including completely random randomized blocks and split plot as well as factorial treatment designs and repeated measures SAS for Linear Models Fourth Edition also includes analysis of covariance multivariate linear models and generalized linear models for non normal data Find inside regression models balanced ANOVA with both fixed and random effects models unbalanced data with both fixed and random effects models covariance models generalized linear models multivariate models and repeated measures New in this edition MIXED and GENMOD procedures updated examples new software related features and other new material This book is part of the SAS
