Satellite Communication Systems Design:

Satellite Communications Systems Madhavendra Richharia, 1995 **Satellite Communication Systems Design** S. Tirró, 1993-06-30 Writing a comprehensive book on satellite communications requires the command of many technical disciplines and the availability of up to date information on international recommendations system architectures and equipment standards. It is therefore necessary to involve many authors each possessing a good level of knowledge in a particular discipline. The problem of using a coherent and unambiguous set of definitions and basic terms has been solved by including in the book all the background information needed for understanding satellite communication systems without any major reference to other textbooks specializing in particular disciplines. The obvious consequence of this approach has been the large size of the book with the advantages however of practically complete independence from other books, more systematic discussion of the subject matter and better readability. After the required background information emphasis has been placed on the discussion of techniques and system design criteria rather than on specific equipment implementation or description of particular systems. The book may be divided in five parts as follows. The first five chapters provide most of the required background information. Chapter 6 is an introductory outline of satellite communication systems. Chapters 7 to 13 deal with the various aspects of technical system design. Chapter 14 discusses system economics. Chapter 15 provides a brief insight into some foreseeable future developments of satellite communications. *Satellite Communications Systems* Madhavendra Richharia, 1999-01 This edition of an established classic covers the technical fundamentals of global communications satellites. It gives engineers and technicians up to the minute detailed coverage of non geostationary constellations, low and medium orbit earth satellite systems, global mobile satellite networks, extensive new case studies. The only satellite communications book to focus on the entire system, groundlinks and all. Satellite Communications Systems Madhavendra Richharia, 1995 This is an examination of the various elements that constitute a satellite communications system and a description of the fundamentals of satellite system design. The book introduces up to date operational systems as examples of how the concepts and techniques are applied in practice. **Satellite Communications Systems Engineering** Louis J. Ippolito, Jr., 2008-09-15 Provides an invaluable detailed and up to date coverage of atmospheric effects and their impact on satellite communications systems design and performance. Significant progress has been made in the last decade in the understanding and modelling of propagation effects on radio wave propagation in the bands utilized for satellite communications. This book provides a comprehensive description and analysis of all atmospheric effects of concern for today's satellite systems and the tools necessary to design the links and to evaluate system performance. This book will serve as an excellent reference to communications engineers, wireless network and system engineers, system designers and graduate students in satellite communications and related areas. Key features: Provides the state of the art in communications satellite link design and performance from the practicing engineer perspective; concise descriptions, specific procedures and

comprehensive solutions Contains the calculations and tools necessary for evaluating system performance Provides a complete evaluation of atmospheric effects modelling and prediction Focuses on the satellite free space link as the primary element in the design and performance for satellite communications and recognizes the importance of free space considerations such as atmospheric effects frequency of operation and adaptive mitigation techniques a solutions manual is available directly from the author lippolit gwu edu SATELLITE COMMUNICATIONS SYSTEMS: DESIGN PRINCIPLES M.
