Saturated Heterocyclic Chemistry Vol 2:

Saturated Heterocyclic Chemistry G. Pattenden, 1978 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields, the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 90 years, The Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967, the whole spectrum of chemistry could no longer be contained within one volume, and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic, Organic, and Physical Chemistry. For more general coverage of the highlights in chemistry, they remain a must. Since that time, the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name, whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

can result in substantial functional changes in the biological as well as physicochemical properties of organic compounds. Incorporation of fluorine into drug molecules can greatly affect their physicochemical properties such as bond strength, lipophilicity, bioavailability, conformation, electrostatic potential, dipole moment, pKa, etc., as well as pharmacokinetic properties such as tissue distribution, rate of metabolism, and pharmacological properties such as pharmacodynamics and toxicology.

Organophosphorus Chemistry D. W. Hutchinson, J. A. Miller, 1982. Organophosphorus Chemistry provides a comprehensive annual review of the literature. Coverage includes phosphines and their chalcogenides, phosphonium salts, low coordination number phosphorus compounds, penta and hexa coordinated compounds, trivalent phosphorus acids, nucleotides and nucleic acids, ylides and related compounds, and phosphazenes. The series will be of value to research workers in universities, government, and industrial research organisations whose work involves the use of organophosphorus compounds. It provides a concise but comprehensive survey of a vast field of study with a wide variety of applications, enabling the reader to rapidly keep abreast of the latest developments in their specialist areas. Weissberger, Edward C. Taylor, 2009-09-15. The Chemistry of Heterocyclic Compounds, since its inception, has been recognized as a cornerstone of heterocyclic chemistry. Each volume attempts to discuss all aspects: properties, synthesis, reactions, physiological and industrial significance of a specific ring system. To keep the series up to date, supplementary volumes covering the recent literature on each individual ring system have been published. Many ring systems, such as pyridines and oxazoles, are treated in distinct books, each consisting of separate volumes or parts dealing with different individual topics. With all authors recognized authorities, the Chemistry of Heterocyclic Chemistry is considered worldwide as the indispensable resource for organic, bioorganic, and medicinal chemists. **Advances in Heterocyclic Chemistry**
