Semi Analytic Methods For The Navier Stokes Equations:

Semi-analytic Methods for the Navier-Stokes Equations Katie Coughlin, 1999-04-18 The lectures collected for this volume were given during a workshop entitled Semi analytic Methods for the Navier Stokes Equations held at the CRM in Montreal The title reflects the current reality in fluid dynamics Navier Stokes equations NSE describe the behavior of fluid in a wide range of physical situations the solutions of these equations are sufficiently complicated so that another level of analysis is clearly needed The fundamental problem is not just to solve the NSE but also to understand what the solutions mean One of the goals of the workshop was to bring together people who while working in different fields share a common perspective on the nature of the problem to be solved The lectures present a diverse set of techniques for modelling computing and understanding phenomena such as instabilities turbulence and spatiotemporal chaos in fluids

Hilbert Spaces of Analytic Functions Javad Mashreghi, Thomas Ransford, Kristian

Seip, 2010-01-01

Algebraic Methods and Q-special Functions Jan Felipe Van Diejen, Luc Vinet, 1999-01-01 There has been revived interest in recent years in the study of special functions Many of the latest advances in the field were inspired by the works of R A Askey and colleagues on basic hypergeometric series and I G Macdonald on orthogonal polynomials related to root systems Significant progress was made by the use of algebraic techniques involving quantum groups Hecke algebras and combinatorial methods The CRM organized a workshop for key researchers in the field to present an overview of current trends This volume consists of the contributions to that workshop Topics include basic hypergeometric functions algebraic and representation theoretic methods combinatorics of symmetric functions root systems and the connections with integrable systems

Singularities in PDE and the Calculus of Variations Stanley Alama, Lia Bronsard, Peter J. Sternberg,

This book contains papers presented at the Workshop on Singularities in PDE and the Calculus of Variations at the CRM in July 2006 The main theme of the meeting was the formation of geometrical singularities in PDE problems with a variational formulation These equations typically arise in some applications to physics engineering or biology for example and their resolution often requires a combination of methods coming from areas such as functional and harmonic analysis differential geometry and geometric measure theory Among the PDE problems discussed were the Cahn Hilliard model of phase transitions and domain walls vortices in Ginzburg Landau type models for superconductivity and superfluidity the Ohno Kawasaki model for diblock copolymers models of image enhancement and Monge Ampere functions The articles give a sampling of problems and methods in this diverse area of mathematics which touches a large part of modern mathematics and its applications

SIDE III -- Symmetries and Integrability of Difference Equations D. Levi, Decio Levi, 2000 This volume

contains the proceedings of the third meeting on Symmetries and Integrability of Difference Equations SIDE III The collection includes original results not published elsewhere and articles that give a rigorous but concise overview of their subject and provides a complete description of the state of the art Research in the field of difference equations often referred to more generally as discrete systems has undergone impressive development in recent years In this collection the reader finds the most important new developments in a number of areas including Lie type symmetries of differential difference and difference difference equations integrability of fully discrete systems such as cellular automata the connection between integrability and discrete geometry the isomonodromy approach to discrete spectral problems and related discrete Painlevé equations difference and q difference equations and orthogonal polynomials difference equations and quantum groups and

integrability and chaos in discrete time dynamical systems The proceedings will be valuable to mathematicians and theoretical physicists interested in the mathematical aspects and or in the physical applications of discrete nonlinear dynamics with special emphasis on the systems that can be integrated by analytic methods or at least admit special explicit solutions The research in this volume will also be of interest to engineers working in discrete dynamics as well as to theoretical biologists and economists

Bäcklund and Darboux Transformations A. A. Coley, 2001 This book is devoted to a classical topic that has undergone rapid and fruitful development over the past 25 years namely Backlund and Darboux transformations and their applications in the theory of integrable systems also known as soliton theory The book consists of two parts The first is a series of introductory pedagogical lectures presented by leading experts in the field They are devoted respectively to Backlund transformations of Painleve equations to the dressing method and Backlund and Darboux transformations and to the classical geometry of Backlund transformations and their applications to soliton theory The second part contains original contributions that represent new developments in the theory and applications of these transformations Both the introductory lectures and the original talks were presented at an International Workshop that took place in Halifax Nova Scotia Canada This volume covers virtually all recent developments in the theory and applications of Backlund and Darboux transformations

Analysis and Geometry of Metric Measure Spaces Galia Devora Dafni, Robert John McCann, Alina Stancu, 2013 Contains lecture notes from most of the courses presented at the 50th anniversary edition of the Seminaire de Mathematiques Superieure in Montreal This 2011 summer school was devoted to the analysis and geometry of metric measure spaces and featured much interplay between this subject and the emergent topic of optimal transportation

Superintegrability in Classical and Quantum Systems Piergiulio Tempesta, 2004 Superintegrable systems are integrable systems classical and quantum that have more integrals of motion than degrees of freedom Such systems have many interesting properties This title is based on the Workshop on Superintegrability in Classical and Quantum Systems organized by the Centre de Recherches Mathematiques in Montreal Quebec

Topics in Probability and Lie Groups: Boundary Theory John Christopher Taylor, 2001 This volume is comprised of two parts the first contains articles by S N Evans F Ledrappier and Figa Talomanaca These articles arose from a Centre de Recherches de Mathematiques CRM seminar entitled Topics in Probability on Lie Groups Boundary Theory Evans gives a synthesis of his pre 1992 work on Gaussian measures on vector spaces over a local field Ledrappier uses the free group on d generators as a paradigm for results on the asymptotic properties of random walks and harmonic measures on the Martin boundary These articles are followed by a case study by Figa Talamanca using Gelfand pairs to study a diffusion on a compact ultrametric space The second part of the book is an appendix to the book Compactifications of Symmetric Spaces Birkhauser by Y Guivarc h and J C Taylor This appendix consists of an article by each author and presents the contents of this book in a more algebraic way L Ji and J P Anker simplifies some of their results on the asymptotics of the Green function that were used to compute Martin boundaries And

Taylor gives a self contained account of Martin boundary theory for manifolds using the theory of second order strictly elliptic partial differential operators
