**Ferroelectrics Literature Index** T. F. Connolly,2012-12-06 Research on ferroelectricity and ferroelectric materials started in 1920 with the discovery by Valasek that the variation of spontaneous polarization in Rochelle salt with sign and magnitude of an applied electric field traced a complete and reproducible hysteresis loop Activity in the field was sporadic until 1935 when Busch and co workers announced the observation of similar behavior in potassium dihydrogen phosphate and related compounds Progress thereafter continued at a modest level with the undertaking of some theoretical as well as further experimental studies In 1944 von Hippel and co workers discovered ferroelectricity in barium titanate The technological importance of ceramic barium titanate and other perovskites led to an upsurge of interest with many new ferroelectrics being identified in the following decade By 1967 about 2000 papers on various aspects of ferroelectricity had been published The bulk of this widely dispersed literature was concerned with the experimental measurement of dielectric crystallographic thermal electromechanical elastic optical and magnetic properties A critical and excellently organized compilation based on these data appeared in 1969 with the publication of Landolt Bornstein Volume 111 3 This superb tabulation gave instant access to the results in the literature on nearly 450 pure substances and solid solutions of ferroelectric and antiferroelectric materials Continuing interest in ferroelectrics spurred by the growing importance of electrooptic crystals resulted in the publication of almost as many additional papers by the end of 1969 as had been surveyed in Landolt Bornstein      **Mechanical and Thermal Properties of Ceramics** J. **Solar Energy Update** ,1981 **Ceramic Sensors** Toshko Nenov, Stefo P. Yordanov, 1996-01-05 From the Author s Preface Ceramic sensors have been in use for more than thirty years Since ceramics exhibit a number of specific characteristics that enable their cost to become lower and their reliability to increase they have occupied a significant position in sensor technology This is why many companies and universities have directed their efforts towards investigating and developing new ceramic sensors and expanding their areas of application To the best of our knowledge there has been no book treating different sensors on the basis of their common physical and chemical properties technological principles and applications This book is a detailed survey of ceramic sensors and a generalization of the results achieved in this field so far Ceramic sensors for different physical quantities are discussed without going too deep into theory The concept of ceramic sensors includes all sensors that are produced using ceramic technology It also covers thick film sensors since from a structural and technological point of view they can be regarded as a variety of ceramic sensors The subject of scientific research in this book is humidity gas temperature and pressure sensors on the basis of semiconductor and dielectric ceramic materials and solid electrolytes Special attention is paid to the physical and chemical as well as the technological bases of ceramic sensors their classification the types of materials used the methods of controlling their parameters and characteristics the areas of application and the electric circuits for connecting the sensors

*Energy Research Abstracts* ,1989 *Transparent Electronics* John F. Wager, Douglas A. Keszler, Rick E. Presley, 2007-11-20 This

monograph is the first roadmap for transparent electronics It defines and assesses what and where the field is where it is going and what needs to happen to get it there Although the central focus of this monograph involves transparent electronics many of the materials devices circuits and process integration strategies discussed will be of great interest to researchers working in other emerging fields including printed electronics large area electronics low cost electronics and disposable electronics

*Ceramic Materials Research* R. Brook, 1989-05-01 The high expectations set on ceramic materials in recent years have always been balanced by the very considerable difficulties seen in reaching the required levels of reproducibility and cost Indications of the significant progress which can be seen in the papers presented in this volume coupled with the recognition that considerable problems still lie between the state of the art and the full and confident exploitation of the many merits of ceramics provide a healthy basis for the profitable selection of future research directions The mastery of ceramic processing and the imaginative matching of the properties of these materials to diverse applications remain among the most promising sectors for technological development
