Rumely, 2010-03-10 The purpose of this book is to develop the foundations of potential theory and rational dynamics on the Berkovich projective line over an arbitrary complete algebraically closed non Archimedean field In addition to providing a concrete and elementary introduction to Berkovich analytic spaces and to potential theory and rational iteration on the Berkovich line the book contains applications to arithmetic geometry and arithmetic dynamics A number of results in the book are new and most have not previously appeared in book form Three appendices on analysis  $\mathbb{R}$  trees and Berkovich's general theory of analytic spaces are included to make the book as self contained as possible The authors first give a detailed description of the topological

structure of the Berkovich projective line and then introduce the Hsia kernel the fundamental kernel for potential theory Using the theory of metrized graphs they define a Laplacian operator on the Berkovich line and construct theories of capacities harmonic and subharmonic functions and Green's functions all of which are strikingly similar to their classical complex counterparts After developing a theory of multiplicities for rational functions they give applications to non Archimedean dynamics including local and global equidistribution theorems fixed point theorems and Berkovich space analogues of many fundamental results from the classical Fatou Julia theory of rational iteration They illustrate the theory with concrete examples and exposit Rivera Letelier's results concerning rational dynamics over the field of  $p$ -adic complex numbers They also establish Berkovich space versions of arithmetic results such as the Fekete Szego theorem and Bilu's equidistribution theorem

Adams, Lars I. Hedberg, 2012-12-06 Function spaces especially those spaces that have become known as Sobolev spaces and their natural extensions are now a central concept in analysis In particular they play a decisive role in the modern theory of partial differential equations PDE Potential theory which grew out of the theory of the electrostatic or gravitational potential the Laplace equation the Dirichlet problem etc had a fundamental role in the development of functional analysis and the theory of Hilbert space Later potential theory was strongly influenced by functional analysis More recently ideas from potential theory have enriched the theory of those more general function spaces that appear naturally in the study of nonlinear partial differential equations This book is motivated by the latter development The connection between potential theory and the theory of Hilbert spaces can be traced back to C F Gauss 181 who proved with modern rigor supplied almost a century later by O Frostman 158 the existence of equilibrium potentials by minimizing a quadratic integral the energy This theme is pervasive in the work of such mathematicians as D Hilbert Ch J de La Vallée Poussin M Riesz O Frostman A Beurling and the connection was made particularly clear in the work of H Cartan 97 in the 1940 s In the thesis of J Deny 119 and in the subsequent work of J Deny and J L
