Concurrency 88 Friedrich H. Vogt, 1988-10-12 This volume contains the proceedings of CONCURRENCY 88 an international conference on formal methods for distributed systems held October 18 19 1988 in Hamburg CONCURRENCY 88 responded to great interest in the field of formal methods as a means of mastering the complexity of distributed systems In addition the impulse was determined by the fact that the various methodological approaches such as constructive or property oriented methods have not had an extensive comparative analysis nor have they been investigated with respect to their possible integration and their practical implications The following topics were addressed Specification Languages Models for Distributed Systems Verification and Validation Knowledge Based Protocol Modeling Fault Tolerance Distributed Databases The volume contains 12 invited papers and 14 contributions selected by the program committee They were presented by authors from Austria the Federal Republic of Germany France Israel Italy the Netherlands the United Kingdom and the United States Mathematical Models for the Semantics of Parallelism Marisa Venturini Zilli, 1987-10-07 The papers collected in this volume are most of the material presented at the Advanced School on Mathematical Models for the Semantics of Parallelism held in Rome September 24 October 1 1986 The need for a comprehensive and clear presentation of the several semantical approaches to parallelism motivated the stress on mathematical models by means of which comparisons among different approaches can also be performed in a perspicuous way **Advances in Petri Nets 1991**

Helmut Plünnecke, Wolfgang Reisig, 1991 The main idea behind the series of volumes Advances in Petri Nets is to present to the general computer science community recent results which are the most representative and significant for the development of the area The papers for the volumes are drawn mainly from the annual International Conferences on Applications and Theory of Petri Nets Selected papers from the latest conference are independently refereed and revised and extended as necessary Some further papers submitted directly to the editor are included Advances in Petri Nets 1991 covers the 11th International Conference on Applications and Theory of Petri Nets held in Paris France in June 1991 The volume contains the Bibliography of Petri Nets 1990 prepared by H Plünnecke and W Reisig with over 4000 entries PUBLISHER S WEBSITE

The Book of Traces Volker Diekert, Grzegorz Rozenberg, 1995 The theory of traces employs techniques and tackles problems from quite diverse areas which include formal language theory combinatorics graph theory algebra logic and the theory of concurrent systems In all these areas the theory of traces has led to interesting problems and significant results It has made an especially big impact in formal language theory and the theory of concurrent systems In both these disciplines it is a well recognized and dynamic research area Within formal language theory it yields the theory of partially commutative monoids and provides an important connection between languages and graphs Within the theory of concurrent

systems it provides an important formal framework for the analysis and synthesis of concurrent systems This monograph covers all important research lines of the theory of traces each chapter is devoted to one research line and is written by leading experts The book is organized in such a way that each chapter can be read independently and hence it is very suitable for advanced courses or seminars on formal language theory the theory of concurrent systems the theory of semigroups and combinatorics An extensive bibliography is included At present there is no other book of this type on trace theory

Mathematical Foundations of Programming Semantics Stephen Brookes,1994-05-20 This volume is the proceedings of the Ninth International Conference on the Mathematical Foundations of Programming Semantics held in New Orleans in April 1993 The focus of the conference series is the semantics of programming languages and the mathematics which supports the study of the semantics The semantics is basically denotation The mathematics may be classified as category theory lattice theory or logic Recent conferences and workshops have increasingly emphasized applications of the semantics and mathematics The study of the semantics develops with the mathematics and the mathematics is inspired by the applications in semantics The volume presents current research in denotational semantics and applications of category theory logic and lattice theory to semantics

Advances in Petri Nets 1987 Grzegorz Rozenberg,1987-06-22 The aim of these series of volumes *Advances in Petri Nets* is to present to the general computer science community the most significant recent results with regard to the development in the area The main source of the papers are the annual European Workshops on Applications and Theory of Petri Nets the highest ranked papers from the past workshops are considered for the series i e they are again reviewed and accordingly revised or extended In addition to the workshop papers the *Advances* also present invited papers The present volume *Advances in Petri Nets 1987* covers the 7th European Workshop on Applications and Theory of Petri Nets held in Oxford Great Britain in June 1986 It also contains a survey on complexity of problems related to Petri nets written by R R Howell and L E Rosier A special feature of this volume is a bibliography on Petri nets containing more than 2000 entries

Programming Distributed Systems H. E. Bal,1990 This is a survey of languages for programming distributed systems The text also describes the implementation of ORCA a new language on top of the Amoeba distributed operating system and concludes with performance evaluation for several example programmes A detailed case study of a modern language is provided together with references to nearly 100 languages and a new model the shared data object model is introduced
