Seminar on Stochastic Processes, 1991 E. Cinlar, K.L. Chung, M. Sharpe, 2012-12-06 The 1991 Seminar on Stochastic Processes was held at the University of California Los Angeles from March 23 through March 25 1991 This was the eleventh in a series of annual meetings which provide researchers with the opportunity to discuss current work on stochastic processes in an informal and enjoyable atmosphere Previous seminars were held at Northwestern University Princeton University the University of Florida the University of Virginia the University of California San Diego and the University of British Columbia Following the successful format of previous years there were five invited lectures These were given by M Barlow G Lawler P March D Stroock M Talagrand The enthusiasm and interest of the participants created a lively and stimulating atmosphere for the seminar Some of the topics discussed are represented by the articles in this volume P J Fitzsimmons T M Liggett S C Port Los Angeles 1991 In Memory of Steven Orey M CRANSTON The mathematical community has lost a cherished colleague with the passing of Steven Orey This unique and thoughtful man has left those who knew him with many pleasant memories He has also left us with important contributions in the development of the theory of Markov processes As a friend and former student I wish to take this chance to recall to those who know and introduce to those who do not a portion of his lifework

Barcelona Seminar on Stochastic Analysis Nualart, Sanz Sole, 2012-12-06 During the of Fall 1991 The Centre de Recerca Matematica a research institute sponsored by the Institut d Estudis Catalans devoted a quarter to the study of stochastic analysis Prominent workers in this field visited the Center from all over the world for periods ranging from a few days to several weeks To take advantage of the presence in Barcelona of so many specialists in stochastic analysis we organized a workshop on the subject in Sant Feliu de Guixols Girona that provided an opportunity for them to exchange information and ideas about their current work Topics discussed included Analysis on the Wiener space Anticipating Stochastic Calculus and its Applications Correlation Inequalities Stochastic Flows Reflected Semimartingales and others This volume contains a refereed selection of contributions from some of the participants in this workshop We are deeply indebted to the authors of the articles for these expositions of their valuable research contributions We also would like to thank all the referees for their helpful advice in making the volume a reflection of the dynamic interchange that characterized the workshop The success of the Seminar was due essentially to the enthusiasm and stimulating discussions of all the participants in an informal and pleasant atmosphere To all of them our warm gratitude

Seminaire de Probabilites XXXIV J. Azema, M. Emery, M. Ledoux, M. Yor, 2007-05-06 This volume contains 19 contributions to various subjects in the theory of commutative and non commutative stochastic processes It also provides a 145 page graduate course on branching and interacting particle systems with applications to non linear filtering by P del Moral and L Miclo

Lectures on Probability Theory and Statistics Sergio Albeverio, Walter Schachermayer, 2003-07-03 In World Mathematical Year 2000 the traditional St Flour Summer School was hosted jointly with the European Mathematical Society Sergio Albeverio reviews the theory of Dirichlet forms and gives applications including partial differential equations stochastic dynamics of quantum systems quantum fields and the geometry of loop spaces The second text by Walter Schachermayer is an introduction to the basic concepts of mathematical finance including the Bachelier and Black Scholes models The fundamental theorem of asset pricing is discussed in detail Finally Michel Talagrand gives an overview of the mean field models for spin glasses This text is a major contribution towards the proof of certain results from physics and includes a discussion of the Sherrington Kirkpatrick and the p spin interaction models

Stochastic Partial Differential Equations: An Introduction Wei Liu, Michael Röckner, 2015-10-06 This book provides an introduction to the theory of stochastic partial differential equations SPDEs of evolutionary type SPDEs are one of the main research directions in probability theory with several wide ranging applications Many types of dynamics with stochastic influence in nature or man made complex systems can be modelled by such equations The theory of SPDEs is based both on the theory of deterministic partial differential equations as well as on modern stochastic analysis Whilst this volume mainly follows the variational approach it also contains a short account on the semigroup or mild solution approach In particular the volume contains a complete presentation of the main existence and uniqueness results in the case of locally monotone coefficients Various types of generalized coercivity conditions are shown to guarantee non explosion but also a systematic approach to treat SPDEs with explosion in finite time is developed It is so far the only book where the latter and the locally monotone case is presented in a detailed and complete way for SPDEs The extension to this more general framework for SPDEs for example in comparison to the well known case of globally monotone coefficients substantially widens the applicability of the results

Mathematical Finance - Bachelier Congress 2000 Helyette Geman, Dilip Madan, Stanley R. Pliska, Ton Vorst, 2013-11-11 The Bachelier Society for Mathematical Finance held its first World Congress in Paris last year and coincided with the centenary of Louis Bacheliers thesis defence In his thesis Bachelier introduces Brownian motion as a tool for the analysis of financial markets as well as the exact definition of options The thesis is viewed by many the key event that marked the emergence of mathematical finance as a scientific discipline The prestigious list of plenary speakers in Paris included two Nobel laureates Paul Samuelson and Robert Merton and the mathematicians Henry McKean and S R S Varadhan Over 130 further selected talks were given in three parallel sessions

Geometry and Invariance in Stochastic Dynamics Stefania Ugolini,Marco Fuhrman,Elisa Mastrogiamomo,Paola Morando,Barbara Rüdiger,2022-02-09 This book grew out of the Random Transformations and Invariance in Stochastic Dynamics conference held in Verona from the 25th to the 28th of March 2019 in honour of Sergio Albeverio It presents the new area of studies concerning invariance and symmetry properties of finite and infinite dimensional stochastic differential equations This area constitutes a natural much needed extension of the theory of classical ordinary and partial differential equations where the reduction theory based on symmetry and invariance of such classical equations has historically proved to be very important both for theoretical and numerical studies and has given rise to important applications The purpose of the present book is to present the state of the art of the studies on stochastic systems from this point of view present some of the underlying fundamental ideas and methods involved and to outline the main lines for future developments The main focus is on bridging the gap between deterministic and stochastic approaches with the goal of contributing to the elaboration of a unified theory that will have a great impact both from the theoretical point of view and the point of view of applications The reader is a mathematician or a theoretical physicist The main discipline is stochastic analysis with profound ideas coming from Mathematical Physics and Lie s Group Geometry While the audience consists essentially of academicians the reader can also be a practitioner with Ph D who is interested in efficient stochastic modelling

Branching Random Walks Zhan Shi,2016-02-04 Providing an elementary introduction to branching random walks the main focus of these lecture notes is on the asymptotic properties of one dimensional discrete time supercritical branching random walks and in particular on extreme positions in each generation as well as the evolution of these positions over time Starting with the simple case of Galton Watson trees the text primarily concentrates on exploiting in various contexts the spinal structure of branching random walks The notes end with some applications to biased random walks on trees
