Disabilities and Brain Function William H. Gaddes,2013-04-17 Some may say that this book is long overdue others including

myself will state that the book appears at just the right time The latter is likely more true for it is doubtful that many in the

professions would until now link issues of learning disabilities with those of neurophysiological dysfunction in the manner in

which ultimately must be the case As a matter of fact there are those who deny the relationship completely Lee Wiederholt

1974 1 in his short but excellent review of the historical perspectives of learning disabilities traces the early interest in this

problem to the work of Gall 1802 and to his successors Broca 1861 Jackson 1864 Bastian 1869 and a few others Each of

these men would at the time of this writing be considered to have interests in the field of neurology although at the time of

their investigations neurology per se was but a gleam in the eye of the anatomical beholder A relative detour then took place

Cerebral palsy in the decades of the 1940s and 1950s caught the attention of researchers through the work of Winthrop

Morgan Phelps orthopedist and George Deaver physiatrist and one or two other medically oriented individuals This was

related to the writings of W J Little 1810 1894 It was however Kurt Goldstein Heinz Wemer both eminent German scientists

**Controversial Therapies for Developmental Disabilities** John W. Jacobson,Richard M. Foxx,James A. Mulick,2005-01-15 One of the largest and most complex human services systems in Western nations has evolved to address the needs of people with developmental disabilities In the U S for example school budgets are stretched thin by legally mandated special education and billions of Medicaid dollars annually are consumed by residential and professional services to this population The temptation of a quick fix is strong Many parents desperately seek the latest ideas and place pressure on program administrators who often are not trained to think critically about the evidence base for intervention efforts The problems of people with developmental disabilities have historically been targeted by a wide range of professionals who rely on clinical experience and intuition and do not submit their claims to the tests of scientific research Professional entrepreneurs have energetically promoted their

treatments to a public perhaps too trustful of those with credentials Thus families and their children are buffeted by reforms founded on belief and ideologically driven management Services fluctuate with the currents of social movements and rapidly shifting philosophies of care as policymakers and providers strive for increased responsiveness and individualization These forces affect not only where and how but how well people are served Too often services are less effective than they could be or worse damaging to personal growth and quality of life Many treatments are based on poorly understood or even disproven approaches What approaches to early intervention education therapy and remediation really help those with mental retardation and developmental disabilities improve their functioning and adaptation And what approaches represent wastes of time effort and resources This book brings together leading behavioral scientists and practitioners to focus light on the major controversies surrounding these questions The authors review the origins perpetuation and resistance to scrutiny of questionable practices and offer a clear rationale for appraising the quality of services In an era of increasing accountability no one with a professional stake in services to individuals with mental retardation and developmental disabilities can afford not to read this book      *Developmental Disabilities Abstracts* ,1978-07      **Learning Disabilities** Maria Tzouriadou,Sotiria Tzivinikou,2021-12-13 More than 200 years of research in the field of learning disabilities have provided us with a vast body of knowledge albeit without answering the fundamental questions what and why Today it is widely accepted that learning disabilities or specific learning disabilities represent a real situation which is mainly related to education but also has long term consequences in the social and professional life of individuals who may be smart but not know how to learn This book examines transdisciplinary psychoeducational learning disability evaluation procedures along with intervention programs aiming to recognize the strengths of students with learning disabilities and address their needs More specifically it reviews the origins and evolution of such assessment models and evidence informed intervention practices and provides guidance and implications for practice and research The book will furnish educators and other school based professionals with a better understanding of the nuances and challenges of the field allowing them to build their capacity of working with such student populations
