Sensory Reeducation Of The Hand After Stroke:

Sensory Re-Education of the Hand After Stroke Margaret Yekutieli, 2000 Stroke patients continue to present a major challenge to the rehabilitation professions In particular the rehabilitated patient with a useless hand remains an all too common phenomenon This book focuses on the sensory perceptual disturbances caused by stroke which even if slight can be the crucial factor in poor hand function A wide ranging review is presented of the processes of functional reorganisation by which the brain responds to the demands posed by injury as well as by learning An inescapable conclusion from this literature is that any therapy which aims to harness these processes for the restoration of function after stroke needs to engage the patient's attention and motivation This is followed by a detailed description of the method of Sensory Re education developed by the author through long experience with patients and culminating in a clinical trial which established its effectiveness While the book is intended primarily for physiotherapists and occupational therapists it contains much to interest all who are concerned with brain function in health and disease including neurologists and neuropsychologists as well as stroke patients and their families Contents Introduction The Challenge Stroke and its Aftermath The Effectiveness of Therapy The Quest for a Different Approach Sensory Loss in Stroke Sensory Testing and the Frequency and Types of Deficit The Functional Implications of Sensory Loss The Theoretical Basis of Sensory Re education Sources Peripheral Nerve Lesions Central Lesions Guide lines for Intervention Contributions from Psychology Attention Motivation The Essentials of Sensory Re education The Focus on the Hand The Therapeutic Relationship The Protocol for a Sensory Task Summary The Curriculum I How to Use the Curriculum Lessons in Touch The Curriculum II Lessons in Proprioception Lessons in the Recognition of Objects and Their Qualities Suggestions for Homework Validation of the Method Theoretical Considerations A Controlled Trial The Next Step Wider Applications Sensory Problems in Standing and Walking After Stroke Cerebral Palsy Other Conditions Wider Applications Conclusion *The Sensing Brain: The Role of Sensation in Rehabilitation and Training*

Stroke Rehabilitation Leeanne M. Carey,2012-06-28 Stroke Rehabilitation Insights from Neuroscience and Imaging informs and challenges neurologists rehabilitation therapists imagers and stroke specialists to adopt more restorative and scientific approaches to stroke rehabilitation based on new evidence from neuroscience and neuroimaging literatures The fields of cognitive neuroscience and neuroimaging are advancing rapidly and providing new insights into human behavior

and learning Similarly improved knowledge of how the brain processes information after injury and recovers over time is providing new perspectives on what can be achieved through rehabilitation Stroke Rehabilitation explores the potential to shape and maximize neural plastic changes in the brain after stroke from a multimodal perspective Active skill based learning is identified as a central element of a restorative approach to rehabilitation The evidence behind core learning principles as well as specific learning strategies that have been applied to retrain lost functions of movement sensation cognition and language are also discussed Current interventions are evaluated relative to this knowledge base and examples are given of how active learning principles have been successfully applied in specific interventions The benefits and evidence behind enriched environments is reviewed with examples of potential application in stroke rehabilitation The capacity of adjunctive therapies such as transcranial magnetic stimulation to modulate receptivity of the damaged brain to benefit from behavioral interventions is also discussed in the context of this multimodal approach Focusing on new insights from neuroscience and imaging the book explores the potential to tailor interventions to the individual based on viable brain networks
