Abstract: Lymph node status is an important prognostic factor in multiple oncologic conditions in humans and companion animals. In addition, the resection of the affected nodes can have a substantial therapeutic effect on various cancer subtypes in both species. Given the impact on prognosis and management, it is paramount to identify and remove affected nodes. While this can be achieved by removing predefined patterns of nodes (regional lymphadenectomy/resection of defined lymphatic stations), modern approaches increasingly utilize sentinel node mapping to identify the draining nodes to decrease the mortality of lymphadenectomies. Recent studies have shown that dogs have more comparable anatomy of the lymphatic system to humans than other animal models such as rodents or pigs. Given the fact that dogs develop spontaneous cancer types that share several similarities to their human counterparts, they represent a valuable translational model. The management of the lymphatic basin and sentinel node mapping have gained increased attention in veterinary surgical oncology in recent years. The present review aims at summarizing the resulting findings and their impact on patient management.

1. Introduction

Lymph node (LN) status is an important prognostic factor for the staging of various cancers in human and veterinary medicine, and the resection of metastatic nodes can improve outcomes in selected cancer types [1–6]. Virchow and Halsted already recognized the importance of the lymphatic system serving as a major barrier for cancer cells [7,8]. Initially, it was assumed that the closest regional LNs were the first sites to be affected by metastases, and the radical resection of the tissue surrounding the tumor was advocated to include all regional nodes [7]. Radical surgical resections of the lymphatic basin remained the unchanged treatment of choice for certain tumors in human surgical oncology until the mid-20th century, when sentinel lymph node (SLN) mapping and more selective lymphadenectomies evolved for several cancer types, including malignant melanoma, breast, vulvar, and cervical cancers [9].

Thus far, a potential therapeutic advantage of lymphadenectomy in companion animals has only been advocated in a few cancer types [1]. One problem in the assessment of the impact of lymphadenectomies in various cancers in veterinary patients is that, to date, no generally accepted resection routine exists for most conditions. In most settings, LNs are resected if they appear enlarged or structurally altered [10–12], although studies have repeatedly shown that the size of the lymph node is no predictor of nodal involvement [13–15]. Alternatively, the resection of RLN is performed, involving the removal of a single LN rather than entire lymphatic stations [1]. These approaches are generally poorly standardized and most certainly lead to the undertreatment of potentially affected LNs. Recently, SLN mapping has gained increased attention. This

Surgical Oncology Manual Frances C. Wright, Jaime M. Escallon, Moises Cukier, Melanie E. Tsang, Usmaan Hameed, 2020-08-27. This third edition manual provides a comprehensive insightful evidenced based review of general surgical oncology and serves as a valuable resource for general surgeons in training practicing general surgeons and surgical oncologists. The volume describes a multidisciplinary approach that integrates clinical radiologic and pathologic data in formulating practical clinical management and offers a practical approach to the most common situations when treating cancer patients. Each chapter focuses on an individual malignancy and describes the presentation of the malignancy integrated management based on stage landmark trials and suggestions for who to discuss at multidisciplinary cancer conferences. Multiple tables in each chapter provide a concise yet comprehensive summary of the current status of the field. Clinical pearls or tips and tricks from high volume surgeons at the University of Toronto are also discussed. The third edition of the *Surgical Oncology Manual* will serve as a critical resource for general surgeons in training and practicing surgeons dealing with this challenging field.

Surgical Oncology Quyen D. Chu, John F. Gibbs, Gazi B. Zibari, 2014-10-20. This volume provides a comprehensive perspective on surgical oncologic diseases that are relevant to those who have an interest in surgical oncology. Its purpose is to distill a voluminous amount of information to readers so they will have the opportunity to apply relevant information and knowledge to their particular needs. Each chapter is written by experts in their field who provide concise and in depth information on their topic and supply references to key articles. Illustrations diagrams and photographs are included to assist the visual learners. Each chapter begins with bulleted key points to focus the readers on the material that will be covered and concludes with an appendix that summarizes the salient points. This unique set up can be used as a tool to quickly review the topic at hand. The text also includes a set of short questions and answers at the end of each chapter to reinforce the salient points.

New Technologies in Surgical Oncology Antonio Mussa, 2009-12-08. Oncological surgeons are often requested in their clinical practice to identify and manage uncommon and complex situations. It is therefore of the utmost importance that they are well aware of the most recent technological evolutions in order to achieve the best possible results in term of oncological outcome with a concern on quality of life and economical issues. Furthermore new techniques can give a fundamental contribution in overcoming the limitations of standard approaches. An essential aim of this book is to underline the great importance and the need of an effective coordination of multi disciplinary care among surgeons medical oncologists radiation therapists plastic surgeons

Surgical Oncology Raphael E. Pollock, 1997-11-30 Among the standard oncology modalities surgical oncology is singular in that it lacks a separate board certification or even an added qualification mechanism Card carrying surgical oncologists are certified by the American Board of Surgery as are all other general surgeons What distinguishes the surgical oncologist is a set of cognitive skills rather than a specific armamentarium of surgical techniques This different conceptual framework is derived from extensive additional training that leads to an in depth understanding of the natural history and biologic behavior of the various solid tumor systems Equipped with this perspective the surgical oncologist is particularly well positioned to integrate the various available therapeutic modalities into a coherent care program for the solid tumor patient As a central theme the chapters of this book demonstrate that increasingly sophisticated diagnostic and staging approaches are helping to move chemotherapy and radiotherapy into the preoperative neoadjuvant setting This fundamental alteration is based on the awareness that even early stage solid tumor disease is frequently systemic at the time of presentation at least on a subclinical level And although

the primary tumor may be controllable by surgery with radiotherapy the uncontrolled and initially clinically unapparent distant disease ultimately determines patient survival The other perspective driving the neoadjuvant approach is an emerging awareness that for most solid tumor systems neoadjuvant treatment responses can facilitate less mutilating surgery with comparable levels of local disease control

Comparative Effectiveness in Surgical Oncology Karl Y. Bilimoria, Christina A. Minami, David M. Mahvi, 2015-02-12 Despite tremendous recent advances in the treatment of most malignancies there remain several critical questions for each cancer This particularly true for the surgical management of solid organ malignancies Comparative effectiveness is a relatively new term which encompasses the age old concepts of how best to treat cancer patients Comparative effectiveness is defined as the direct comparison of healthcare interventions to determine which work best for which patients when considering the benefits and risks The Institute of Medicine has defined comparative effectiveness research CER as the generation and synthesis of evidence that compares the benefits and harms of alternative methods to prevent diagnose treat and monitor a clinical condition or to improve the delivery of care CER is certainly best done with well conducted randomized controlled trials Unfortunately clinical trials are not always feasible owing to the impracticality of conducting the trial the considerable cost and the time required to complete the trial These challenges are even more pronounced with respect to surgical treatment Thus alternative approaches may need to be considered in order to address pressing questions in the care of the oncology patient These approaches may include well conducted retrospective cohort studies from cancer registries and other data sources decision and cost effectiveness analyses and other novel methodologies This book lays out the current critical questions for each major malignancy and proposes approaches to gain answers to these pressing questions
