Helping Low Birth Weight, Premature Babies Ruth T. Gross, Donna Spiker, Christine W. Haynes, 1997 Each year in the United States 250 000 infants are born too soon weighing too little For these low birth weight premature infants the future is uncertain since they are at risk for a variety of serious medical and developmental problems including behavioral and learning disorders that may have damaging effects for the rest of their lives The extent to which a comprehensive early intervention program could improve or prevent these adverse outcomes was examined in the Infant Health and Development Program a randomized controlled trial involving almost 1 000 infants in eight cities in the United States This book describes in detail the program its research methodology the progress of the program and the results of the clinical trial The program was administered by an interdisciplinary team composed of physicians biostatisticians child development specialists and researchers from several disciplines It was instituted upon the discharge of the infants from the neonatal nursery and was maintained for three years One third of the infants were randomly assigned to an intervention group the remainder to a follow up group Infants in both groups received pediatric care and community referral services but only those in the intervention group participated in a program that included extensive home visits attendance at a child development center and group meetings for parents The results of the program proved to be clinically important at age three the children in the intervention group had significantly higher IQ scores greater cognitive development and fewer behavioral problems The implications of the findings for public policy are equally important for there is increasing interest in the prevention early detection and management of developmental disabilities in children as evidenced by such legislation as the Education for All Children Act Strategies to minimize the problems of low birth weight children with their potential for long term savings through the prevention of disabilities and their attendant costs could have significant repercussions in such governmental areas as medical care education and social welfare **Sequelae of Low Birthweight** Henry G. Neurodevelopmental Outcomes of Preterm Birth Chiara Nosarti, Robin M. Murray, Maureen Hack, 2010-04-08 The improved survival of very preterm and very low birth weight infants in recent decades has been associated with an increase in the prevalence of physical and neurodevelopmental problems Attention is increasingly being focused on the quality of life of survivors who are at greater risk of brain damage and consequent neurological disorders and neuropsychological and behavioural impairments In this volume leading experts present a comprehensive and up to date perspective on research in various aspects of the long term consequences of very preterm birth As well as extending existing knowledge of the neurodevelopmental sequelae following very preterm birth a shared aim of this burgeoning body of research is to identify the mechanisms underlying variations in outcome and thus recognise subgroups of children who are at increased risk of neurodevelopmental problems for whom appropriate intervention strategies can be devised Pediatricians neurologists

Neurodevelopmental Mechanisms in Psychopathology Dante Cicchetti, Elaine F. Walker, 2003-08-18 This volume represents a burgeoning perspective on the origins of psychopathology one that focuses on the development of the human central nervous system The contemporary neurodevelopmental perspective assumes that mental disorders result from etiologic factors that alter the normal course of brain development Defined here in its broadest sense neurodevelopment is a process that begins at conception and extends throughout the life span We now know that it is a complex process and that its course can be altered by a host of factors ranging from inherited genetic liabilities to psychosocial stressors This book features the very best thinking in the converging fields of developmental neuroscience and developmental psychopathology The developmental window represented is broad extending from the prenatal period through adulthood and the authors cover a broad range of etiologic factors and a spectrum of clinical disorders Moreover the contributors did not hesitate to use the opportunity to hypothesize about underlying mechanisms and to speculate on research directions

Paediatric Pulmonary Function Testing Jürg Hammer, Ernst Eber, F.J.F. Herth, 2005. This book represents a comprehensive review of the most recent developments in paediatric pulmonary function testing and their clinical applications in common paediatric respiratory disorders. The first section reviews the current lung function tests used in infants and toddlers who are by nature unable to cooperate with most testing procedures. It describes the methodologies, provides normal values where available and gives advice for data interpretation. The second section deals with the classic adult type pulmonary function tests and their application in the semi cooperative or cooperative older child. Age related technical issues and the limitations of these tests are considered. Tests assessing the respiratory system beyond the usual measurements of mechanics, lung volume and bronchial responsiveness are covered in the third section. These include the measurements of respiratory muscle function, work of breathing, diffusing capacity and inflammatory markers in exhaled air and breath condensate. The fourth section discusses the clinical usefulness of pulmonary function tests in the diagnosis and management of the most common paediatric respiratory disorders including asthma, cystic fibrosis and neuromuscular disorders as well as in the follow up care after lung or bone marrow transplantation or after neonatal lung disease. This part is unique since no books previously published in the field of paediatric lung function testing have considered its clinical value in the individual patient. Finally, the future role of pulmonary function testing in the neonatal and paediatric intensive care unit is evaluated. Practical and up to date, this textbook is of special interest for paediatric and adult pulmonologists, paediatric intensivists, general paediatricians and physicians in training for these specialties as well as for pulmonary function technicians and respiratory therapists. The SAGE Handbook of Developmental Disorders Patricia Howlin, Tony Charman, Mohammad Ghaziuddin, 2011-01-31. Over the last four decades, breakthroughs in genetic knowledge together with the emergence of disciplines devoted to the scientific study of developmental disorders have resulted in much greater awareness of the many different behavioural and genetic phenotypes involved. It is now evident that not only do different disorders have different causes and different manifestations, but different neurological and biochemical bases, different responses to intervention and different life courses. Reflecting the enormous changes that have taken place in our knowledge and understanding of developmental disorders, this groundbreaking international volume brings this vast and complex field together for the first time. The Editors have collected together the world's leading academic scholars and clinicians to explore

how current research across a range of different disciplines can inform clinical practice and help to improve the lives of individuals and their families

Rogers,2019-03-01 This book discusses how to identify those children who are at hazard of becoming less than they might be as adults It explores critical policy issues in broadening access to health care services and reassessing results of major intervention efforts for improving life chances of vulnerable children

Environments as Therapy for Brain Dysfunction Roger Walsh,2012-12-06 At the 1975 Winter Conference on Brain Research a series of workshops were held to discuss the role of the sensory environment in the etiology and therapy of brain dysfunction The participants represented a broad range of disciplines ranging from basic neuroscience through human development psychology They were linked by a common belief that the role of the sensory environment in brain dysfunction had received insufficient attention Each had made contributions to this question in their own respective disciplines and it was hoped that this meeting would provide an opportunity for cross fertilization and synthesis From these workshops this book evolved Its production would have been impossible without the help of many people Anna Taylor s flexibility allowed the holding of a larger than normal workshop while the authors bore up well under editorial pressure to meet deadlines Linda Coleman and Phyllis Straw provided excellent support from Plenum while Therese Linden gave editorial assistance Valarie Munden Rosemary Schmele and Estelle Hoffman did an excellent job of typing RNW was supported by a Fellowship from the Foundations Fund for Research in Psychiatry As always our families provided continuous support and encouragement To all these people and more we say thank you Roger N Walsh M D B Med Sc Dip Psychol Ph D William T Greenough Ph D

Urban Family Medicine Richard B. Birrer,2012-12-06 Now more than ever Family Medicine is alive and well in the United States The base of this medical specialty has traditionally been in the smaller cities suburban communities and rural areas of this country Over the past decade however there has been a resurgence of interest in primary care in our major metropolitan areas as a solution to the high tech subspecialty pace of the tertiary care environment A rebirth of urban family medicine has accompanied these pioneering efforts To date the accomplishments are substantial and the prospects are bright There is still a long way to go and there are a significant number of hurdles to cross Although diseases are generally the same wherever you are their effects as illness on the individual and the family are strongly influenced by the environment and social milieu Urban families have distinctive and diverse problems cultural economic and ethnic Training pro grams situated in the large cities must recognize these issues and include special emphasis on the situations that the family physician is likely to encounter during and after his training There is very little research literature on the background and nature of special urban problems and these areas are the subject of several chapters of this long overdue volume devoted specifically to urban family medicine Dr Birrer has persuaded true experts to share their knowledge with the reader
