Seriation, Stratigraphy, and Index Fossils Michael J. O'Brien, R. Lee Lyman, 1999-07-31 Reviews relative dating methods used during the first half of the 20th century to determine the relative ages of archaeological phenomena O'Brien and Lyman U of Missouri Columbia distinguish the several stratigraphic excavation techniques and argue that they tend to result in discontinuous measures of time discuss typological cross dating and why it measures time discontinuously and describe the three techniques of seriation noting that two of these techniques measure time and thus cultural change as a continuum Annotation copyrighted by Book News Inc Portland OR

Seriation, Stratigraphy, and Index Fossils Michael J. O'Brien, R. Lee Lyman, 2007-05-08 It is difficult for today's students of archaeology to imagine an era when chronometric dating methods were unavailable However even a casual perusal of the large body of literature that arose during the first half of the twentieth century reveals a battery of clever methods used to determine the relative ages of archaeological phenomena often with considerable precision Stratigraphic excavation is perhaps the best known of the various relative dating methods used by prehistorians Although there are several techniques of using artifacts from superposed strata to measure time these are rarely if ever differentiated Rather common practice is to categorize them under the heading stratigraphic excavation This text distinguishes among the several techniques and argues that stratigraphic excavation tends to result in discontinuous measures of time a point little appreciated by modern archaeologists Although not as well known as stratigraphic excavation two other methods of relative dating have figured important in Americanist archaeology seriation and the use of index fossils The latter like stratigraphic excavation measures time discontinuously while the former in various guises measures time continuously Perhaps no other method used in archaeology is as misunderstood as seriation and the authors provide detailed descriptions and examples of each of its three different techniques Each method and technique of relative dating is placed in historical perspective with particular focus on developments in North America an approach that allows a more complete understanding of the methods described both in terms of analytical technique and disciplinary history This text will appeal to all archaeologists from graduate students to seasoned professionals who want to learn more about the backbone of archaeological dating

Hurt, Gordon Rakita, 2000-10-30 The topics of style and function within evolutionary archaeology have been the subject of great debate in the field of archaeology in general over the past two decades Evolutionary archaeologists have a unique perspective on these concepts one that has sometimes been misunderstood by archaeologists working within other theoretical perspectives The dichotomy between style and function was first formulated in the late 1970s by Robert Dunnell and remains axiomatic within the theoretical perspective of evolutionary archaeology The original definitions of style and function were grounded in biological evolutionary concepts regarding neutral variation versus variation that is subject to natural selection Several chapters expand upon these concepts and explore how Darwinian evolutionary theory may be used to understand the archaeological record Other chapters demonstrate this application through empirical case studies Dunnell provides a foreword introducing and re examining his original thesis This volume is the only text devoted to the topic of style and function within the literature of evolutionary archaeology It provides not only theoretical discussions and augmentation but also significant historical background regarding the development of the style function distinction within archaeology Moreover it presents several case studies that provide examples of how evolutionary style and function may be applied to the prehistoric record

*The Quality of the Archaeological Record* Charles Perreault, 2019-09-16 Paleobiology struggled for decades to influence our understanding of evolution and the history of life because it was stymied by a focus on microevolution and an incredibly patchy fossil record But in the 1970s the field took a radical turn as paleobiologists began to investigate processes that could only be recognized in the fossil record across larger scales of time and space That turn led to a new wave of macroevolutionary investigations novel insights into the evolution of species and a growing prominence for the field among the biological sciences In *The Quality of the Archaeological Record* Charles Perreault shows that archaeology not only faces a parallel problem but may also find a model in the rise of paleobiology for a shift in the science and theory of the field To get there he proposes a more macroscale approach to making sense of the archaeological record an approach that reveals patterns and processes not visible within the span of a human lifetime but rather across an observation window thousands of years long and thousands of kilometers wide Just as with the fossil record the archaeological record has the scope necessary to detect macroscale cultural phenomena because it can provide samples that are large enough to cancel out the noise generated by micro scale events By recalibrating their research to the quality of the archaeological record and developing a true macroarchaeology program Perreault argues archaeologists can finally unleash the full contributive value of their discipline

Lee

Lyman, 2021-06-10 Documentation analysis and explanation of culture change have long been goals of archaeology Scientific graphs facilitate the visual thinking that allow archaeologists to determine the relationship between variables and if well designed comprehend the processes implied by the relationship Different graph types suggest different ontologies and theories of change and particular techniques of parsing temporally continuous morphological variation of artefacts into types influence graph form North American archaeologists have grappled with finding a graph that effectively and efficiently displays culture change over time Line graphs bar graphs and numerous one off graph types were used between 1910 and 1950 after which spindle graphs displaying temporal frequency distributions of specimens within each of multiple artefact types emerged as the most readily deciphered diagram The variety of graph types used over the twentieth century indicate archaeologists often mixed elements of both Darwinian variational evolutionary change and Midas touch like transformational change Today there is minimal discussion of graph theory or graph grammar in introductory archaeology textbooks or advanced texts and elements of the two theories of evolution are still mixed Culture has changed and archaeology provides unique access to the totality of humankind s cultural past It is therefore crucial that graph theory construction and decipherment are revived in archaeological discussion *Computational Intelligence in Archaeology*
