Sertoli Cell Biology:

Sertoli Cell Biology Michael K. Skinner, Michael D. Griswold, 2004-11-23 Sertoli cells assist in the production of sperm in the male reproductive system This book provides a state of the art update on the topic of sertoli cells and male reproduction It addresses such highly topical areas as stem cells genomics and molecular genetics as well as provides historical information on the discovery of this type of cell and the pathophysiology of male infertility Presents the state of the art research on topics such as stem cell research transplantation and genomics Includes contributions from leaders in the field including several members of the National Academy of Science *Sertoli Cell Metabolism and Spermatogenesis* Pedro F. Oliveira, Marco G. Alves, 2015-11-29 This book is focused on Sertoli cell physiology and its role in the spermatogenic event These cells known as nurse cells are essential for the normal development of germ cells by offering not only physical support and creating an immune privileged environment but also for providing nutritional support The presence of Sertoli cells promotes the establishment of the appropriate microenvironment so that spermatogenesis may occur Spermatogenesis maintenance in vivo is highly dependent on the metabolic cooperation established between Sertoli cells and developing germ cells For many years this metabolic cooperation between testicular cells has been disregarded but recent advances have highlighted the relevance of these processes for male fertility Thus the understanding of the functioning and regulation of these metabolic processes is a crucial step to identify key mechanisms associated with Sertoli cell dysfunction and to enlighten their influence on male fertility *Regulation of Sertoli Cell and Germ Cell Differentiation* R. Brehm, Klaus Steger, 2005-09-16 Unwanted childlessness affects approximately one in six couples worldwide though the exact proportion of the predominant cause of the problem remains controversial according to the World Health Organization WHO in nearly 40% of cases the cause can be attributed to the female in 20% to the male in 25% to both and in 15% the cause remains unknown Based on these figures the incidence of male factor infertility in the general population is approximately 7% The majority of these men approximately 30% experience irreversible idiopathic infertility and cannot father children without some form of medical intervention Male factor infertility in addition may be caused by testicular germ cell cancer which is known to represent the most common cancer among young men aged 15 to 35 years in Western industrialized countries The number of affected men has increased dramatically over the past 50 years There is now growing evidence that human testicular germ cell cancer originates from fetal germ cells exhibiting an aberrant programme of gene expression and tumour progression may be favoured by an aberrant Sertoli cell germ cell communication *Regulation of Sertoli Cell and Germ Cell Differentiation* R. Brehm, Klaus Steger, 2005-12-12 Unwanted childlessness affects approximately one in six couples worldwide though the exact proportion of the predominant cause of the problem remains controversial according to the World Health Organization WHO in nearly 40% of cases the cause can be attributed to the female in 20% to the male in 25% to both and in 15% the cause remains unknown Based on these figures the incidence of male factor infertility in the general

population is approximately 7% The majority of these men approximately 30% experience irreversible idiopathic infertility and cannot father children without some form of medical intervention Male factor infertility in addition may be caused by testicular germ cell cancer which is known to represent the most common cancer among young men aged 15 to 35 years in Western industrialized countries The number of affected men has increased dramatically over the past 50 years There is now growing evidence that human testicular germ cell cancer originates from fetal germ cells exhibiting an aberrant programme of gene expression and tumour progression may be favoured by an aberrant Sertoli cell germ cell communication

Cell Biology and Translational Medicine, Volume 24 Kursad Turksen, 2025-05-23 This volume in the Cell Biology and Translational Medicine series continues to explore the potential utility of stem cells in regenerative medicine Topics covered include various aspects of stem cells in regeneration both in health and cancer These include research into microenvironments signals exosomes biomaterials and their role in regeneration in general and in various types of cancer A goal of the series continues to be to highlight timely often emerging topics and novel approaches that can accelerate the utility of stem cells in regenerative medicine

Cell and Molecular Biology of the Testis Claude Desjardins, Larry L. Ewing, 1993 This book is a comprehensive multi authored work on the structure and function of the mammalian testis The approach emphasizes gene expression translation and production of specific gene products and the cellular and molecular regulation of these fundamental processes Rather than provide a global survey of all aspects of male reproduction this book stresses specific mechanisms that underscore the structure and function of the testis It explains old and new concepts from a cellular and molecular perspective This novel approach allows the authors to forge links between cell and molecular biology and well established aspects of spermatogenesis and steroidogenesis The result is a well focused comprehensive and synthetic analysis of testicular biology

Cell Biology and Translational Medicine, Volume 3 Kursad Turksen, 2018-11-28 Much research has focused on the basic cellular and molecular biological aspects of stem cells Much of this research has been fueled by their potential for use in regenerative medicine applications which has in turn spurred growing numbers of translational and clinical studies However more work is needed if the potential is to be realized for improvement of the lives and well being of patients with numerous diseases and conditions This book series Cell Biology and Translational Medicine CBTMED as part of SpringerNature's longstanding and very successful Advances in Experimental Medicine and Biology book series has the goal to accelerate advances by timely information exchange Emerging areas of regenerative medicine and translational aspects of stem cells are covered in each volume Outstanding researchers are recruited to highlight developments and remaining challenges in both the basic research and clinical arenas This current book is the third volume of a continuing series

Male Reproductive Anatomy Wei Wu, 2022-01-19 The male reproductive system which is made up of the testes scrotum epididymis vas deferens seminal vesicles prostate gland bulbourethral gland ejaculatory duct urethra and penis functions mainly in the production nourishment and temporary storage of spermatozoa Epigenetic

modifications are essential to regulate normal gonadal development and spermatogenesis. The sperm epigenome is highly susceptible influence by a wide spectrum of environmental stimuli. This book focuses on the male reproductive system discussing topics ranging from aspects of anatomy and risk factors for male infertility to clinical techniques and management of male reproductive health. *Molecular Mechanisms in Spermatogenesis* C.Yan Cheng, Fei Sun, 2021-08-28. This new edition provides an update on the molecular mechanisms that regulate spermatogenesis. In addition to the rodent as a study model, chapters also include research on studies in humans. It includes the latest approaches of studying spermatogenesis such as the use of bioinformatics, molecular modeling and others which are not commonly found in published materials. It also reviews the latest developments in the field such as studies on the role of regulatory RNAs on spermatogenesis. Due to the declining fertility rate among men, a brand new chapter highlights the impact of environmental toxicants on spermatogenesis.

Molecular Biology of the Male Reproductive System David de Kretser, 2012-12-02. Written by experts in their respective fields, this book reviews the expanding knowledge concerning the mechanisms regulating male reproduction at the molecular and cellular levels. It covers the development of the testes and regulatory controls for spermatogenesis and steroidogenesis and it considers aspects of Sertoli cell function. Areas of emphasis include communication between the various cell types involved in reproduction by hormone and growth factors and the mechanisms by which these factors regulate gene expression. A number of mammalian systems including humans are covered. The carefully selected authors provide a clear synopsis of the concepts in each area as well as the latest references enabling the reader to investigate the topic further. This book is of interest to those seeking an understanding of the regulatory mechanisms in male reproduction and is written for the graduate and postgraduate levels. Provides up to date reviews of the molecular and cellular biology of male reproduction. Includes chapters on the developmental biology of the testes. Links conventional hormonal control of testicular function with the evolving role of growth factors and proto oncogenes. **Knobil and Neill's Physiology of Reproduction** Ernst

Knobil, 2006. The 3rd edition, the first new one in ten years, includes coverage of molecular levels of detail arising from the last decade's explosion of information at this level of organismic organization. There are 5 new Associate Editors and about 2/3 of the chapters have new authors. Chapters prepared by return authors are extensively revised. Several new chapters have been added on the topic of pregnancy reflecting the vigorous investigation of this topic during the last decade. The information covered includes both human and experimental animals. Basic principles are sought and information at the organismic and molecular levels are presented. The leading comprehensive work on the physiology of reproduction. Edited and authored by the world's leading scientists in the field. Is a synthesis of the molecular, cellular and organismic levels of organization. Bibliographies of chapters are extensive and cover all the relevant literature.
