Advances in Latent Variable Mixture Models Gregory R. Hancock, Karen M. Samuelsen, 2007-11-01 The current volume Advances in Latent Variable Mixture Models contains chapters by all of the speakers who participated in the 2006 CILVR conference providing not just a snapshot of the event but more importantly chronicling the state of the art in latent variable mixture model research The volume starts with an overview chapter by the CILVR conference keynote speaker Bengt Muthén offering a lay of the land for latent variable mixture models before the volume moves to more specific constellations of topics Part I Multilevel and Longitudinal Systems deals with mixtures for data that are hierarchical in nature either due to the data's

sampling structure or to the repetition of measures of varied types over time Part II Models for Assessment and Diagnosis addresses scenarios for making judgments about individuals state of knowledge or development and about the instruments used for making such judgments Finally Part III Challenges in Model Evaluation focuses on some of the methodological issues associated with the selection of models most accurately representing the processes and populations under investigation It should be stated that this volume is not intended to be a first exposure to latent variable methods Readers lacking such foundational knowledge are encouraged to consult primary and or secondary didactic resources in order to get the most from the chapters in this volume Once armed with the basic understanding of latent variable methods we believe readers will find this volume incredibly exciting

The gender dimension of social change Elisabetta Ruspini,Angela Dale,2002-05-29 The transformations that are now taking place in women s lives are of great interest to social scientists and policy makers yet we know very little about the impact of this social change over time This new study uses longitudinal data information gathered over a considerable period of time to provide new insights into the changing dynamics of lives of women today In particular it explores the potential of longitudinal or life course analysis as a powerful tool for appreciating the gender dimension of social life The contributors view the data from a policy perspective and use comparative analysis from Britain Germany the Netherlands Sweden and Japan to expand our understanding of women s life courses in relation to both men and women and the system of inequality

Applied Multiway Data Analysis Pieter M. Kroonenberg,2008-03-11 From a preeminent authority a modern and applied treatment of multiway data analysis This groundbreaking book is the first of its kind to present methods for analyzing multiway data by applying multiway component techniques Multiway analysis is a specialized branch of the larger field of multivariate statistics that extends the standard methods for two way data such as

component analysis factor analysis cluster analysis correspondence analysis and multidimensional scaling to multiway data

Applied Multiway Data Analysis presents a unique thorough and authoritative treatment of this relatively new and emerging approach to data analysis that is applicable across a range of fields from the social and behavioral sciences to agriculture environmental sciences and chemistry General introductions to multiway data types methods and estimation procedures are provided in addition to detailed explanations and advice for readers who would like to learn more about applying multiway methods Using carefully laid out examples and engaging applications the book begins with an introductory chapter that serves as a general overview of multiway analysis including the types of problems it can address Next the process of setting up carrying out and evaluating multiway analyses is discussed along with commonly encountered issues such as preprocessing missing data model and dimensionality selection postprocessing and transformation as well as robustness and stability issues Extensive examples are presented within a unified framework consisting of a five step structure objectives data description and design model and dimensionality selection results and their interpretation and validation Procedures featured in the book are conducted using 3WayPack which is software developed by the author and analyses can also be carried out within the R and MATLAB systems Several data sets and 3WayPack can be downloaded via the book's related Web site The author presents the material in a clear accessible style without unnecessary or complex formalism assuring a smooth transition from well known standard two analysis to multiway analysis for readers from a wide range of backgrounds An understanding of linear algebra statistics and principal component analyses and related techniques is assumed though the author makes an effort to keep the presentation at a conceptual rather than mathematical level wherever possible Applied Multiway Data Analysis is an excellent supplement for component analysis and statistical multivariate analysis courses at the upper undergraduate and beginning graduate levels The book can also serve as a primary reference for statisticians data analysts methodologists applied mathematicians and social science researchers working in academia or industry Visit the Related Website <http://three-mode.leidenuniv.nl> to view data from the book
