Eurekas and Euphorias Walter Gratzer,Walter Bruno Gratzer,2004 The march of science has never proceeded smoothly It has been marked through the years by episodes of drama and comedy of failure as well as triumph by outrageous strokes of luck deserved and undeserved and sometimes by human tragedy It has seen deep intellectual friendships as well as ferocious animosities and once in a while acts of theft and malice deceit and even a hoax or two Scientists come in all shapes the obsessive and the dilettantish the genial the envious the preternaturally brilliant and the slow witted who sometimes see further in the end the open minded and the intolerant recluses and arrivistes From the death of Archimedes at the hands of an irritated Roman soldier to the concoction of a superconducting witches brew at the very close of the twentieth century the stories in **Eurekas and Euphorias** pour out told with wit and relish by Walter Gratzer Open this book at random and you may chance on the clumsy chemist who breaks a thermometer in a reaction vat and finds mercury to be the catalyst that starts the modern dyestuff industry or a famous physicist dissolving his gold Nobel Prize medal in acid to prevent it from falling into the hands of the Nazis recovering it when the war ends mathematicians and physicists diverting themselves in prison cells and even in a madhouse by creating startling advances in their subject We witness the careers sometimes tragic sometimes carefree of the great women mathematicians from Hypatia of Alexandria to Sophie Germain in France and Sonia Kovalevskaya in Russia and Sweden and then Marie Curie s relentless battle with the French Academy Here then a glorious parade unfolds to delight the reader with stories to astonish to instruct and most especially to entertain

The Cambridge History of Science: Volume 6, The Modern Biological and Earth Sciences David C. Lindberg,Peter J. Bowler,Ronald L. Numbers,Roy Porter,2003 This book in the highly respected **Cambridge History of Science** series is devoted to the history of the life and earth sciences since 1800 It provides comprehensive and authoritative surveys of historical thinking on major developments in these areas of science on the social and cultural milieus in which the knowledge was generated and on the wider impact of the major theoretical and practical innovations The articles are written by acknowledged experts who provide concise

accounts of the latest historical thinking coupled with guides to the most important recent literature In addition to histories of traditional sciences the book covers the emergence of newer disciplines such as genetics biochemistry and geophysics The interaction of scientific techniques with their practical applications in areas such as medicine is a major focus of the book as is its coverage of controversial areas such as science and religion and environmentalism

On Science Tuhina Ray,Urmie Ray,2020-12-20 On Science Concepts Cultures and Limits explores science and its relationship with religion philosophy ethics mathematics and with socio economic changes The book gives an overview of the metaphysical contexts in which science emerged and the particular forms science has taken in history It examines the preoccupation of ancient cultures with the validity of interpretations of natural phenomena the role of the study of materials in the substantiation of the conceptual world and the establishment of modern science on both experimentation and mathematics This theoretical discussion is illustrated by a host of examples from physics to the life sciences which highlight how current concepts developed over the centuries or even millennia The volume underscores some of the weaknesses inherent in a scientific approach and how in the modern context of a wealth driven technological orientation these have been conducive to a gradual distortion of science into its exact opposite a dogmatic faith It further discusses the nature of scientific education in the world and how conditions can be created to ensure pioneering creativity and to preserve scientific rigor The book will be of great interest to scholars teachers and researchers of science the metaphysics and philosophy of science mathematics science and technology studies epistemology ethics history and sociology It will also be useful for general readers who are interested in the history of scientific discoveries and ideas as well as in the issues surrounding science today in particular its relations with many urgent problems

The Story of Chemistry N. C. Datta,2005 Chemistry touches every aspects of our life but we are largely ignorant of it A general reader has access to many popular books in the various areas of physics and astornomy but in the area of chemistry there is virtually no accessible material One common perception is that chemistry is a difficult subject which is partially true

Facing Gaia Bruno Latour,2017-09-05 The emergence of modern sciences in the seventeenth century profoundly renewed our understanding of nature For the last three centuries new ideas of nature have been continually developed by theology politics economics and science especially the sciences of the material world The situation is even more unstable today now that we have entered an ecological mutation of unprecedented scale Some call it the Anthropocene but it is best described as a new climatic regime And a new regime it certainly is since the many unexpected connections between human activity and the natural world oblige every one of us to reopen the earlier notions of nature and redistribute what had been packed inside So the question now arises what will replace the old ways of looking at nature This book explores a potential candidate proposed by James Lovelock when he chose the name Gaia for the fragile complex system through which living phenomena modify the Earth The fact that he was immediately misunderstood proves simply that his readers have tried to fit this new notion into an older frame transforming Gaia into a single organism a kind of giant

thermostat some sort of New Age goddess or even divine Providence In this series of lectures on natural religion Bruno Latour argues that the complex and ambiguous figure of Gaia offers on the contrary an ideal way to disentangle the ethical political theological and scientific aspects of the now obsolete notion of nature He lays the groundwork for a future collaboration among scientists theologians activists and artists as they and we begin to adjust to the new climatic regime
