On The Genesis Of Species By St George Mivart:

On the Genesis of Species St. George Jackson Mivart, 1871 *On the Genesis of Species / by St. George Mivart* St. George Jackson Mivart, 2004-01-01 [On the Genesis of Species By St. George Mivart, F.R.S](#) St. George Jackson Mivart, 1871 **On the Genesis of Species** St. George Jackson Mivart, 2025-09-15 *On the Genesis of Species* by St George Mivart examines the theory of evolution offering a critical analysis of Charles Darwin's natural selection while proposing alternative mechanisms for species development Originally published in 1871 the book explores the origins and diversification of life drawing on zoological evidence and theological perspectives Mivart argues that natural selection alone cannot account for the complexity of species suggesting additional factors like inherent tendencies in organisms Written for scholars and scientists this work engages with contemporary debates on evolution blending biology with philosophical and religious considerations **Darwinism** Chauncey Wright, 1871 *The Darwin Myth* Benjamin Wiker, 2009-06-02 *The Darwin Myth* casts aside Darwinism's politically correct veneer and offers a critical scientific analysis of Darwin's life and his history changing theory Without vilifying or deifying Darwin Wiker reveals the story of the complicated man with a love for family science and a passion to eliminate God from public thought **Religion in Victorian Britain, Vol. IV** Gerald Parsons, 1988 During the late 1980s and early 1990s the city of San Francisco waged a war against the homeless Over 1 000 arrests and citations were handed out by the police to activists for simply distributing free food in public parks Why would a liberal city arrest activists helping the homeless In exploring this question the book treats the conflict between the city and activists as a unique opportunity to examine the contested nature of homelessness and public space while developing an anarchist alternative to liberal urban politics that is rooted in mutual aid solidarity and anti capitalism In addition to exploring theoretical and political issues related to gentrification broken windows policing and anti homeless laws this book provides activists students and scholars examples of how anarchist homeless activists in San Francisco resisted these processes This book is relevant to United Nations Sustainable Development Goal 2 Zero hunger **Contesting Cultural Authority** Frank M. Turner, 1993-04-08 A volume of essays which constitutes a major overview of the Victorian intellectual enterprise **Victorian Science and Literature, Part I Vol 3** Gowan Dawson, Bernard Lightman, Piers J Hale, Jonathan Smith, Suzy Anger, James Paradis, Richard England, Jude V Nixon, David Amigoni, James Elwick, 2024-10-28 This eight volume reset edition in two parts collects rare primary sources on Victorian science literature and culture The sources cover both scientific writing that has an aesthetic component what might be called the literature of science and more overtly literary texts that deal with scientific matters **Philosophical Discussions** Chauncey Wright, Charles Eliot Norton, 1877 **The Life of Stars** Giora Shaviv, 2009-10-03 It is the stars The stars above us govern our conditions William Shakespeare King Lear A Few Words about What Why and How The structure of the stars in general and the Sun in particular has been the subject of extensive scientific research and debate for over a century The discovery of quantum theory during the

rst half of the nineteenth century provided much of the theoretical background needed to understand the making of the stars and how they live off their energy source Progress in the theory of stellar structure was made through extensive discussions and controversies between the giants of the field as well as brilliant discoveries by astronomers In this book we shall carefully expose the building of the theory of stellar structure and evolution and explain how our understanding of the stars has emerged from this background of incessant debate About hundred years were required for astrophysics to answer the crucial questions What is the energy source of the stars How are the stars made How do they evolve and eventually die The answers to these questions have profound implications for astrophysics physics and biology and the question of how we ourselves come to be here While we already possess many of the answers the theory of stellar structure is far from being complete and there are many open questions for example concerning the mechanisms which trigger giant supernova explosions Many internal hydrodynamic processes remain a mystery Yet some global pictures can indeed be outlined and this is what we shall attempt to do here

Nature Sir Norman Lockyer, 1871

Open Fields, 1999-03-11 Science always raises more questions than it can contain These challenging essays explore how ideas are transformed as they come under the stress of unforeseen readers Using a wealth of material from diverse nineteenth and twentieth century writing Gillian Beer tracks encounters between science literature and other forms of emotional experience Her analysis discloses issues of chance gender nation and desire A substantial group of essays centres on Darwin and the incentives of his thinking from language theory to his encounters with Fuegians Other essays include Hardy Helmholtz Hopkins Clerk Maxwell and Woolf The collection throws a different light on Victorian experience and the rise of modernism and engages with current controversies about the place of science in culture

The Alice Books and the Contested Ground of the Natural World Laura White, 2017-06-26 Though popular opinion would have us see Alice's Adventures in Wonderland and Through the Looking Glass and What Alice Found There as whimsical nonsensical and thoroughly enjoyable stories told mostly for children contemporary research has shown us there is a vastly greater depth to the stories than would be seen at first glance Building on the now popular idea amongst Alice enthusiasts that the Alice books at heart were intended for adults as well as children Laura White takes current research in a new fascinating direction During the Victorian era of the book's original publication ideas about nature and our relation to nature were changing drastically The Alice Books and the Contested Ground of the Natural World argues that Lewis Carroll used the book's charm wit and often puzzling conclusions to counter the emerging tendencies of the time which favored Darwinism and theories of evolution and challenged the then conventional thinking of the relationship between mankind and nature Though a scientist and ardent student of nature himself Carroll used his famously playful language fantastic worlds and brilliant often impossible characters to support more the traditional Christian ideology of the time in which mankind holds absolute sovereignty over animals and nature

Good Enough Daniel S. Milo, 2019-06-18

Philosopher Daniel Milo offers a vigorous critique of the quasi monopoly that Darwin's natural selection has on our idea of

the natural world In popular thought Darwinism has even acquired the trappings of an ethical system focused on optimization competition and innovation Yet in nature imperfect creatures often have the evolutionary edge

The North American Review Jared Sparks, Henry Cabot Lodge, Edward Everett, James Russell Lowell, 1871 Vols 277 230 no 2 include Stuff and nonsense v 5 6 no 8 Jan 1929 Aug 1930

The North American Review Anonymous, 2023-02-20 Reprint of the original first published in 1871 The publishing house Anatiposi publishes historical books as reprints Due to their age these books may have missing pages or inferior quality Our aim is to preserve these books and make them available to the public so that they do not get lost

The Invention of Telepathy, 1870-1901 Roger Luckhurst, 2002 The Invention of Telepathy explores one of the enduring concepts to emerge from the late nineteenth century Telepathy was coined by Frederic Myers in 1882 He defined it as the communication of any kind from one mind to another independently of the recognised channels of sense By 1901 it had become a disputed phenomenon amongst physical scientists yet was the royal road to the unconscious mind Telepathy was discussed by eminent men and women of the day including Sigmund Freud Thomas Huxley Henry and William James Mary Kingsley Andrew Lang Vernon Lee W T Stead and Oscar Wilde Did telepathy signal evolutionary advance or possible decline Could it be a means of binding the Empire closer together or was it used by natives to subvert imperial communications Were women more sensitive than men and if so why Roger Luckhurst investigates these questions in an exciting and accessible study that mixes history of science with cultural history and literary analysis

Chronic Vigour Gregory P. Elder, 1996 Chronic Vigour is a study of the development of Christian thought and the doctrine of Providential Evolution The author argues that the renovation of Anglican theology as a response to Darwin's evolutionary theory actually began at the moment of Darwin's first publication of The Origin of Species Chronic Vigour is unique because it examines a school of clergymen who knew Darwin and corresponded with him The book demonstrates how these clergymen came to endorse Darwinian biology as early as 1884 in Britain It places the history of the principle of providential evolution squarely in its English context The book consists of five chapters The first chapter is devoted to Edward Bouverie Pusey 1800 1882 the Professor of Hebrew at Oxford and the leader of the Tractarian movement The second chapter evaluates the religious proposals which were offered within the Church itself as a direct reaction to biological evolution In the third chapter the author investigates St George Jackson Mivart 1827 1900 the key person to generate the doctrine of Providential evolution The subject of the fourth chapter is the Reverend Charles Kingsley 1819 1875 who was the model of the progressive Victorian parson and the first Anglican priest to be an evolutionist Finally chapter five brings together many of the book's themes by examining Bishop Frederick Temple's 1821 1902 contributions to the providential evolution cause

Darwin and the Emergence of Evolutionary Theories of Mind and Behavior Robert J. Richards, 2014-06-01 With insight and wit Robert J Richards focuses on the development of evolutionary theories of mind and behavior from their first distinct appearance in the eighteenth century to their controversial state today Particularly important in the nineteenth century were

Charles Darwin's ideas about instinct, reason, and morality which Richards considers against the background of Darwin's personality, training, scientific and cultural concerns, and intellectual community. Many critics have argued that the Darwinian revolution stripped nature of moral purpose and ethically neutered the human animal. Richards contends, however, that Darwin, Herbert Spencer, and their disciples attempted to reanimate moral life, believing that the evolutionary process gave heart to unselfish, altruistic behavior. Richards's book is now the obvious introduction to the history of ideas about mind and behavior in the nineteenth century. Mark Ridley, *Times Literary Supplement*: "Not since the publication of Michael Ghiselin's *The Triumph of the Darwinian Method* has there been such an ambitious, challenging, and methodologically self-conscious interpretation of the rise and development of evolutionary theories and Darwin's role therein." John C. Greene, *Science*: "His book triumphantly achieves the goal of all great scholarship: it not only informs us but shows us why becoming thus informed is essential to understanding our own issues and projects." Daniel C. Dennett, *Philosophy of Science*.

Adopting the Tune of Phrase: An Psychological Symphony within **On The Genesis Of Species By St George Mivart**

In some sort of eaten by displays and the ceaseless chatter of instant communication, the melodic beauty and mental symphony produced by the prepared word often fade in to the backdrop, eclipsed by the constant noise and disruptions that permeate our lives.
