H. Dall,2017-09-17 Excerpt from *On the Remains of Later Prehistoric Man Obtained From Caves in the Catherina Archipelago Alaska Territory and Especially From the Caves of the Aleutian Islands* The island contains active volcanoes as I am informed and in the immediate vicinity of the cave are solfataras from which steam constantly arises and the soil is said to be warm to the touch The rock is of a whitish and ferruginous color and sharp grain Specimens examined by Dr Endlich of the Smithsonian Institution prove to be a siliceous sinter containing a little alumina and soda and some hydrous sesquioxide of iron In the spectroscope traces of lithium and potassium and possibly a trace of lime were seen From this and from the fact that the atmosphere of the cave is said to have been quite hot rendering it uncomfortable to remain in it is possible that the cave itself may be the crater of a small extinct solfatara About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works **On the Remains of Later Prehistoric Man Obtained from Caves in the Catherina Archipelago, Alaska Territory, and Especially from the Caves of the Aleut** William Healey Dall,2012-01-01 Unlike some other reproductions of classic texts 1 We have not used OCR Optical Character Recognition as this leads to bad quality books with introduced typos 2 In books where there are images such as portraits maps sketches etc We have endeavoured to keep the quality of these images so they represent accurately the original artefact Although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy *On the Remains of Later Prehistoric Man Obtained from Caves in the Catherina Archipelago, Alaska Territory, and Especially from the Caves of the Aleut* William Healey Dall,2018-02-05 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact and remains as true to the original work as possible Therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work As a reproduction of a historical artifact this work may contain missing or blurred pages poor pictures errant marks etc
