On The Track Of Ice Age Mammals:

On the Track of Ice Age Mammals Antony J. Sutcliffe, 1988-07 **On the Track of Ice Age Mammals** Antony John Sutcliffe, 1985 Using geological and fossil evidence this book investigates the mammals of the last 2 million years Also investigates the possibility of recurring Ice Ages in the future *On the Track of Ice Age Mammals* Antony John Sutcliffe, 1985 Buchbesprechung. On the track of Ice Age mammals Karl Alban Hünemann, A. J. Sutcliffe, 1986 Ice Age Cave Faunas of North America Blaine W. Schubert, Jim I. Mead, Russell William Graham, Denver Museum of Nature and Science, 2003-11-10 This book gathers the findings of a number of studies on North American cave paleontology Although not intended to be all inclusive Ice Age Cave Faunas of North America contains contributions that range from overviews of the significance of cave fossils to reports about new localities and studies of specific vertebrate groups These essays describe how cave remains record the evolutionary patterns of organisms and their biogeography how they can help reconstruct past ecosystems and climatic fluctuations how they provide an important record of the evolution of modern ecosystems and even how some of these caves contain traces of human activity The book s eclectic nature should appeal to students professional and amateur paleontologists biologists geologists speleologists and cavers The contributors are Ticul Alvarez Joaquin Arroyo Cabrales Christopher J Bell Larry L Coats Jennifer Glennon Wulf Gose Frederick Grady Russell Wm Graham Timothy H Heaton Carmen J Jans Langel Ernest L Lundelius Jr H Gregory McDonald Jim I Mead Oscar J Polaco Blaine W Schubert Holmes A Semken Jr and Alisa J Winkler **When the Planet Rages** Charles B. Officer, Jake Page, 2009 When the Planet Rages describes some of the great events of environmental history from natural calamities such as the Lisbon earthquake of 1755 and the ice ages to man made disasters such as Chernobyl acid rain and the depletion of the ozone layer Officer and Page provide fascinating discussions of meteorites and comets of the demise of mammoths mastodons and dinosaurs and of great floods that have swept the earth But they also show that human activity can make trouble for nature from the depletion of natural resources to air and water pollution *Settling the Earth* Clive Gamble, 2013-12-30 How and when did we become the only human species to settle the whole earth How did our brains become so large In this book Clive Gamble sets out to answer these fundamental questions digging deep into the archives of archaeology fossil ancestors and human genetics The wealth of detail in these sources allows him to write a completely new account of our earliest beginnings a deep history in which we devised solutions not only to the technical challenges of global settlement but also cracked the problem long before writing and smartphones of how to live apart yet stay in touch **Too Clever for Our Own Good** Kaoru Yamamoto, 2007 Too Clever for Our Own Good closely studies the phenomenon of evolution through culture Unlike the evolution through genetics typical in other creatures this uniquely human process hinges upon making and using myriad cultural extensions of our own creation devices both material and nonmaterial These concrete and abstract cultural extensions such as clothing shelter tools language ethics and social organizations have enormously enhanced our capacity for controlling nature other

people and ourselves The author draws upon his own background in the natural and social sciences to examine a wide array of human experiences ranging from the use of concrete technological inventions to that of more symbolic extensions like logic metaphor and self image In this exploration attention is called not only to the constructive power of these tools but also and more significantly to their often overlooked negative consequences The critical analysis of the role of cultural extensions in human evolution is relevant for both general readers and students or specialists in human sciences and education Book jacket

Human Impact On The Environment Judith E. Jacobsen, 2019-04-02 This book explores the way in which human culture and technology have altered the environment through time The contributors drawn from a wide variety of disciplines including anthropology biology history physics and atmospheric science explore the relationship between humans and the environment as an ongoing process not just as a recent art

The Archaeological and Forensic Applications of Microfossils: A Deeper Understanding of Human History M. Williams, T. Hill, I. Boomer, I.P. Wilkinson, 2017-06-16 Microfossils are an abundant component of the sedimentary rock record Their analysis can reveal not only the environments in which the rocks were deposited but also their age When combined the spatial and temporal distribution patterns of microfossils offer enormous utility for archaeological and forensic investigations Their presence can act as a geological fingerprint and the tiniest fragment of material such as a broken Iron Age potsherd can contain a microfossil signature that reveals the geographical source of the materials under investigation This book explores how microfossils are employed as tools to interpret human society and habitation throughout history Examples include microfossil evidence associated with Palaeolithic human occupation at Boxgrove in Sussex alongside investigations into human induced landscape change during the Holocene Further examples include the use of microfossils to provenance the source materials of Iron Age ceramics Roman mosaics and Minoan pottery in addition to their application to help solve modern murder cases highlighting the diverse applications of microfossils to improving our understanding of human history

Roots of Cataclysm Richard W. Welch, 2009 **Biotic Response to Global Change** Stephen J. Culver, Peter F. Rawson, 2006-12-14 Concern about the effects of global change on our planet's future has driven much research into the last few thousand years of earth history In contrast this volume takes a much longer viewpoint to provide a historical perspective to recent and future global change Over 40 international specialists investigate the reaction of life to global environmental changes from Cretaceous times to the turn of the century During this time earth's climate has changed from a very warm greenhouse phase with no significant ice sheets to today's ice house world A wide spectrum of animal plant and protistan life is discussed encompassing terrestrial shallow marine and deep marine realms Each chapter considers a particular taxonomic group looking first at the general picture and then focusing on more specialized aspects such as extinctions diversity and biogeography This volume will form an invaluable reference for researchers and graduate students in paleontology geology biology oceanography and climatology

The Bible, Rocks and Time Davis A.

Young, Ralph F. Stearley, 2008-08-18 Davis A Young and Ralph Stearley seek to convince readers of the vast antiquity of the Earth. They point out the flaws of young Earth creationism and counter the impression by many scientists that all Christians are young Earth creationists.

Thin on the Ground Steven E. Churchill, 2014-10-02 *Thin on the Ground* Neandertal Biology Archeology and Ecology synthesizes the current knowledge about our sister species the Neandertals combining data from a variety of disciplines to reach a cohesive theory behind Neandertal low population densities and relatively low rate of technological innovation. The book highlights and contrasts the differences between Neandertals and early modern humans and explores the morphological physiological and behavioral adaptive solutions which led to the extinction of the Neandertals and the population expansion of modern humans. Written by a world recognized expert in physical anthropology *Thin on the Ground* Neandertal Biology Archeology and Ecology will be a must have title for anyone interested in the rise and fall of the Neandertals.

Archaeological Sediments and Soils Anthony J Barham, Richard I Macphail, 2016-06-16 A collection of papers focusing on the links between archaeology and the study of geological sediments and soils.

The Oxford Illustrated History of Prehistoric Europe Barry Cunliffe, 2001 Edited by Barry Cunliffe one of the world's leading archaeologists this book provides a comprehensive account of prehistoric Europe from the coming of the Stone Age to the fall of the Roman Empire. Unique in its approach it is a history of both humanity and the environment looking at the changing landscape of Europe and the responses and adaptations to these changes. With over 300 plates maps and figures this fascinating volume will be enjoyed by anyone with an interest in the early history art and archaeology of Europe.

Pleistocene Amphibians and Reptiles in Britain and Europe J. Alan Holman, 1998-06-18 The Pleistocene epoch or Ice Age an extended period of advancing and retreating ice sheets is characterized by striking climatic oscillations and sea level fluctuations. This age saw the rise and spread of humans and a great extinction of large mammals by the end of the epoch in fact the world today is essentially the product of dramatic changes that took place in the Pleistocene. This book a companion to the author's *Pleistocene Amphibians and Reptiles in North America* discusses the Pleistocene amphibians and reptiles in Britain and the European continent eastward through present day Poland the Czech Republic Hungary the Yugoslavian republics and Greece. The book begins with a general discussion of the Pleistocene in Britain and Europe with an emphasis on regional terms used to define Pleistocene chronological events. Next a look at the pre Pleistocene herpetofauna of the study area sets the stage for a discussion of Pleistocene herpetofauna. A significant section of the book consists of a bestiary a series of annotated taxonomic accounts of Pleistocene herpetological taxa from the region. Following this is the interpretive section beginning with a discussion of herpetological species as paleoenvironmental indicators and continuing with an analysis of herpetological population adjustments to Pleistocene events in Britain and Europe and then with a discussion of extinction patterns in the region. Finally the author compares Pleistocene herpetological events in Europe with those in North America. This volume and its companion together provide an up to date and comprehensive review of Pleistocene herpetofaunas across a significant

portion of the Northern Hemisphere

Phylogeography of California Kristina A. Schierenbeck, 2014-08-26

Phylogeography of California examines the evolution of a variety of taxa ancient and recent native and migratory to elucidate evolutionary events both major and minor that shaped the distribution radiation and speciation of the biota of California The book also interprets evolutionary history in a geological context and reviews new and emerging phylogeographic patterns Focusing on a region that is defined by physical and political boundaries Kristina A Schierenbeck provides a phylogeographic survey of California s diverse flora and fauna according to their major organismal groups Life history and ecological characteristics which play prominent roles in the various outcomes for respective clades are also considered throughout the work Supporting scholars and researchers who study evolutionary diversification the book analyzes research that helps assess one of the major challenges in phylogeographic studies understanding changes in population structures shaped by geological and geographical processes California is one of only twenty five acknowledged biological hotspots worldwide and the phylogeographic history of the state can be extrapolated to study other regions in western North America Further consideration is given to implications for conservation recommendations concerning the biogeographic provinces that roughly define the state of California and predictions related to climate change

Dinosaurs, Spitfires, and Sea Dragons

Christopher McGowan, 1991 McGowan attempts to solve some of the enduring mysteries about dinosaurs and other prehistoric reptiles making fascinating comparisons between living and extinct animals and drawing on science and engineering concepts to explain the similarities between the aerodynamics of pteradons and Spitfire planes Illustrations

Animal Life at Low Temperature John Davenport, 2012-12-06 To humans cold has a distinctly positive quality Frostbite a nip in the air biting cold all express the concept of cold as an entity which attacks the body numbing and damaging it in the process Probably the richness of descriptive English in this area stems from the early experiences of a group of essentially tropical apes making their living on a cold and windswept island group half way between the Equator and the Arctic During a scientific education we soon learn that there is no such thing as cold only an absence of heat Cold does not invade us heat simply deserts Later still we come to appreciate that temperature is a reflection of kinetic energy and that the quantity of kinetic energy in a system is determined by the speed of molecular movement Despite this realization it is difficult to abandon the sensible prejudices of palaeolithic Homo sapiens shivering in his huts and caves For example appreciating that a polar bear is probably as comfortable when swimming from ice floe to ice floe as we are when swimming in the summer Mediterranean is not easy understanding the thermal sensations of a cold blooded earthworm virtually impossible We must always be wary of an anthropocentric attitude when considering the effects of cold on other species
