On The Way To The Zoo:

On the Way to the Zoo Linda Pastan, 1975 *Ethics on the Ark* Bryan G. Norton, Michael Hutchins, Terry Maple, Elizabeth Stevens, 2012-01-11 *Ethics on the Ark* presents a passionate multivocal discussion among zoo professionals, activists, conservation biologists, and philosophers about the future of zoos and aquariums, the treatment of animals in captivity, and the question of whether the individual, the species, or the ecosystem is the most important focus in conservation efforts. Contributors represent all sides of the issues. Moving from the fundamental to the practical, from biodiversity to population regulation, from animal research to captive breeding, *Ethics on the Ark* represents an important gathering of the many fervent and contentious viewpoints shaping the wildlife conservation debate. **Museums in Motion** Edward P. Alexander, Mary Alexander, 2008 In 1979 Edward P. Alexander's *Museums in Motion* was hailed as a much needed addition to the museum literature. In combining the history of museums since the eighteenth century with a detailed examination of the function of museums and museum workers in modern society, it served as an essential resource for those seeking to enter the museum profession and for established professionals looking for an expanded understanding of their own discipline. Now Mary Alexander has produced a newly revised edition of the classic text, bringing it to the twenty-first century with coverage of emerging trends, resources, and challenges. New material also includes a discussion of the children's museum as a distinct type of institution and an exploration of the role computers play in both outreach and traditional in-person visits. **How Animals Heal Us** Jay Griffiths, 2025-06-05 A moving, essential book. Nobody writes about Nature with more beauty and grace than Jay Griffiths. Brian Eno. From celebrated author Jay Griffiths comes a unique and heartfelt insight into the healing nature of our relationship with animals. Pet owners and animal lovers instinctively know that animals heal. This book offers the evidence, drawing widely on scientific discoveries, history, and Indigenous knowledge. We meet a pot-bellied pig who saved her owner's life, lions who guarded a girl from kidnappers, dolphins and whales rescuing people in danger, and dogs who can smell cancer and phone the Emergency Services. Animal sounds, from insects to birdsong and the purring of cats, are directly medicinal, and their presence can heal the pain of loneliness. Animals, including donkeys, can be natural therapists for the hurt psyche, alleviating trauma, fear, and depression. In this original, revelatory, and exuberant book, Jay Griffiths explores how animals can have a role in every level of healing, from the individual to the collective, guiding us in how we might create societies that are healthier, fairer, and kinder. Wolves may be teachers of ethics; monkeys and dogs can object to unfairness; and bees take collective decisions. Animals are irresistible medicine for a healthy culture, animating the arts with spectacular vitality and verve, as poetry knows. Open-hearted, playful, and wise, *How Animals Heal Us* puts animals at the heart of a restorative vision of health. A wild and vital treasure trove of stories woven together with Griffiths's characteristic exuberance and joyfully untamed mind. Helen Jukes, author of *A Honeybee Heart Has Five Openings*. Schizoanalysis and Animal Science Education Helena Pedersen, 2019-02-07 Within the education system acts of violence toward animals take place and are manifested on a routine basis in science classes in lecture halls in school canteens and during study visits to zoos farms and slaughterhouses Taken for granted as necessary for teaching and learning this violence profoundly affects animals as well as students It also provides new entry points for understanding education as a multispecies power regime driven by numerous other investments than knowledge dissemination alone What then is the nature of this educational violence and how exactly does education work through techniques of interference with student and animal bodies Based on ethnographic research within upper secondary schools and higher education this book challenges the use of animals in education by innovative engagement of Deleuze and Guattari's tool of schizoanalysis Sparking a fundamental rethinking of educational processes relations and aims the book explores how scientific knowledge about animals proliferates through complex interplay of power and desire in contested spaces of teaching and learning Configuring animal science education as a set of machines working in tandem with the animal industry Helena Pedersen offers radical new insights into how education forms subjectivities and social orders under conditions of capitalist expansion that capture students and animals alike Bringing together education studies science studies critical animal studies and continental philosophy Pedersen also provides examples of disruptive action that can put education to work for transformation and liberation

Cloning Wild Life Carrie Friese, 2013-09-02 In this brilliant study of cloned wild life Carrie Friese adds a whole new dimension to the study of reproduction illustrating vividly and persuasively how social and biological reproduction are inextricably bound together and why this matters Sarah Franklin author of *Dolly Mixtures* the *Remaking of Genealogy* The natural world is marked by an ever increasing loss of varied habitats a growing number of species extinctions and a full range of new kinds of dilemmas posed by global warming At the same time humans are also working to actively shape this natural world through contemporary bioscience and biotechnology In *Cloning Wild Life* Carrie Friese posits that cloned endangered animals in zoos sit at the apex of these two trends as humans seek a scientific solution to environmental crisis Often fraught with controversy cloning technologies Friese argues significantly affect our conceptualizations of and engagements with wildlife and nature By studying animals at different locations Friese explores the human practices surrounding the cloning of endangered animals She visits zoos the San Diego Zoological Park the Audubon Center in New Orleans and the Zoological Society of London to see cloning and related practices in action as well as attending academic and medical conferences and interviewing scientists conservationists and zookeepers involved in cloning

Ultimately she concludes that the act of recalibrating nature through science is what most disturbs us about cloning animals in captivity revealing that debates over cloning become in the end a site of political struggle between different human groups Moreover Friese explores the implications of the social role that animals at the zoo play in the first place how they are viewed consumed and used by humans for our own needs A unique study uniting sociology and the study of science and technology Cloning Wild Life demonstrates just how much bioscience reproduces and changes our ideas about the meaning of life itself Carrie Friese is Lecturer in Sociology at the London School of Economics and Political Science
