Environment in the 21st Century and New Development Patterns K. Matsushita, 2013-06-29 Economic growth after World War II was made possible through dramatic increases in the use of material resources and energy. It is apparent that current development patterns followed by industrialized countries are causing serious environmental problems and that they are neither ecologically nor socially sustainable. In recent years many Asian developing countries which have suffered from poverty for decades are experiencing high rates of economic growth by introducing material intensive production and consumption patterns. The globalization trends magnify on a global scale the problems associated with current development patterns. How can we transform existing economic and social systems into more environmentally benign and sustainable ones? This book presents a number of issues that must be considered when discussing new development patterns which are environmentally friendly and socially fair. It covers concepts of new development patterns, new energy and water supply, sustainable agriculture, information technology, and environment information disclosure and poverty alleviation. Audience: This volume will be of interest to those who are involved in innovative interdisciplinary policy studies on environment and development, particularly in Asia and the Pacific region. Also those who are interested in realizing sustainable development through agriculture, water supply, information technology, chemical industry, and sustainability issues in China and India.

Global Environmental Politics Pamela S. Chasek, David L. Downie, Jen Iris Allan, 2025-09-25 Global Environmental Politics has provided an accurate up to date and unbiased understanding of the world's most pressing environmental issues for more than thirty years. This ninth edition continues this practice by covering critical new developments in global environmental politics and policymaking. Updated case studies on key issues such as climate change, endangered species, ozone depletion, land degradation and desertification, marine biodiversity in areas beyond national jurisdiction, whaling, hazardous wastes, toxic chemicals, mercury, and biodiversity detail the ongoing development of major environmental treaty regimes and a new case study on plastic pollution showcases the challenges of creating new treaties during a period of significant global change. There is also new material on the challenges to implementing the Sustainable Development Goals, the 2030 Agenda for Sustainable Development, the World Trade Organization's agreement on fisheries subsidies, and the use of the International Court of Justice to improve compliance with environmental agreements. Updated information about global environmental trends, paradigms, and actors completes this comprehensive introduction to contemporary international environmental politics. Global Environmental Politics is vital reading for students of environmental politics and anyone wishing to understand the current state of the field and to make informed decisions about which policies will best safeguard our environment for the future.

Climate Change and World Food Security Thomas E. Downing, 2013-06-29 In the last half decade since sustainable development became a serious objective, what have we achieved? Are livelihoods more secure? Are nations wealthier and more resilient? Is environmental quality being restored or maintained? These are essential questions of development. Their answers are many, varied between communities and regions, even between individuals. Two years ago, in the aftermath of the Earth Summit and ratification of the Framework Convention on Climate Change, but before the first Conference of Parties, I participated in a panel at the inaugural Oxford Environment Conference on Climate Change and World Food Security. The panel vigorously reviewed issues of resilient development and food security. This book is a product of the Oxford Environment Conference. It takes the essential questions of sustainability as a starting point to focus on present food security and its future prospects in the face of climate change. Why is this book important? First, I believe our goals to end hunger are under threat. We know what to do in many respects but fail to generate the finances and political will to change the structures that thrive on poverty. Second, I believe concern about the environment has become dangerously separated from the fundamental issues of human deprivation. Third, I believe climate change is a serious threat and I am dismayed at the way nations dither over how to control greenhouse gas emissions and mechanisms to meet the challenge of adverse climate impacts.
