On Weathering The Life Of Buildings In Time:

On Weathering Mohsen Mostafavi, David Leatherbarrow, 1993-03-22 On Weathering illustrates the complex nature of the architectural project by taking into account its temporality linking technical problems of maintenance and decay with a focused consideration of their philosophical and ethical implications In a clear and direct account supplemented by many photographs commissioned for this book Mostafavi and Leatherbarrow examine buildings and other projects from Alberti to Le Corbusier to show that the continual refinishing of the building by natural forces adds to rather than detracts from architectural meaning Their central discovery that weathering makes the final state of the construction necessarily indefinite challenges the conventional notion of a building's completeness By recognizing the inherent uncertainty and inevitability of weathering and by viewing the concept of weathering as a continuation of the building process rather than as a force antagonistic to it the authors offer alternative readings of historical constructions and potential beginnings for new architectural projects

On Weathering, 1993 Building Time David Leatherbarrow, 2020-11-26 While most books on architecture concentrate on spatial themes this book explores architecture's temporal dimensions Through a series of close readings of buildings both contemporary and classic it demonstrates the centrality of time in modern architecture and shows why an understanding of time is critical to understanding good architecture All buildings exist in time Even if designed for permanence they change slowly but inevitably They change use they accrue history and meaning they decay all of these processes are inscribed in time So too is the path traced by the sun through a building and the movements of the human body from room to room Time this book argues is the framework for our spatial experience of architecture and a key dimension of a building's structure and significance Building Time presents twelve close readings of buildings and artworks which explore this idea Examining works by distinctive modern architects from Eileen Gray to Ivaro Siza and Wang Shu it takes the reader in some cases literally step by step through a built work and provides insightful reflections on the importance of making space for time in architectural design This is a book for both theorists and for architectural designers Through it theorists will find a way to rethink the fundamental premises and aims of design work while designers will rediscover the order and ideas that shape the world around them its buildings interiors and landscapes

How Buildings Work Edward Allen, 2005-09-01 Illustrated with hundreds of illuminating line drawings this classic guide reveals virtually every secret of a building's function how it stands up keeps its occupants safe and comfortable gets built grows old and dies and why some buildings do this so much better than others Drawing on things he's learned from the many buildings he himself designed and in some cases built with his own hands Edward Allen explains complex phenomena such as the role of the sun in heating buildings and the range of structural devices that are used for support from trusses and bearing walls to post tensioned concrete beams and corbeled vaults He stresses the importance of intelligent design in dealing with such problems as overheating and overcooling excessive energy use leaky roofs and windows fire safety and noisy interiors He serves up some

surprises thermal insulation is generally a better investment than solar collectors board fences are not effective noise barriers there s one type of window that can be left open during a rainstorm The new edition emphasizes green architecture and eco conscious design and construction It features a prologue on sustainable construction and includes new information on topics such as the collapse of the World Trade Center sick building syndrome and EIFS failures and how they could have been prevented Allen also highlights the array of amazing new building materials now available such as self cleaning glass photovoltaics transparent ceramics cloud gel and super high strength concrete and structural fibers Edward Allen makes it easy for everyone from armchair architects and sidewalk superintendents to students of architecture and construction to understand the mysteries and complexities of even the largest building from how it recycles waste and controls the movement of air to how it is kept alive and growing

With(Out) Trace: Interdisciplinary Investigations into Time, Space and the Body Simon Dwyer,Rachel Franks,Reina Green,2019-07-22 This volume was first published by Inter Disciplinary Press in 2015 This book With out Trace Inter Disciplinary Investigations into Time Space and the Body unpacks many of the issues that surround the idea of trace what we intentionally an unintentionally leave behind as well as how trace can help us to move forward In particular this volume looks at how an inter disciplinary approach can suggest new ways of seeing and subsequently exploring interconnections between time space and the body The papers within this work accomplish more than tracing a theme a theory or discipline within the study of time space and the body Moreover the collection does not simply trace past debates about the relationship between the three Indeed the interdisciplinarity of this collection will it is hoped suggest other ways of seeing the field and of tracing new paths through it Exploring those new perspectives and new paths will undoubtedly enrich future thinking about the interconnections between time space and the body

Architectural Theory, Volume 2 Harry Francis

Mallgrave, Christina Contandriopoulos, 2008-08-11. This second volume of the landmark Architectural Theory anthology surveys the development of architectural theory from the Franco-Prussian war of 1871 until the end of the twentieth century. The entire two-volume anthology follows the full range of architectural literature from classical times to present transformations. An ambitious anthology bringing together over 300 classic and contemporary essays that survey the key developments and trends in architecture. Spans the period from 1871 to 2005 from John Ruskin and the arts and crafts movement in Great Britain through to the development of L'Esplanade in New York City and the creation of a metropolis in the East China Sea. Organized thematically, featuring general and section introductions and headnotes to each essay written by a renowned expert on architectural theory. Places the work of architects like Koolhaas, Eisenman, and Lynch alongside the work of prominent architectural critics, offering a balanced perspective on current debates. Includes many hard-to-find texts and works never previously translated into English. Alongside Volume I, An Anthology from Vitruvius to 1870, creates a stunning overview of architectural theory from early antiquity to the twenty-first century.

Obsolescence Daniel M.

Abramson, 2016-02-12. In our architectural pursuits, we often seem to be in search of something newer, grander, or more efficient, and this phenomenon is not novel. In the spring of 1910, hundreds of workers labored day and night to demolish the Gillender Building in New York, once the loftiest office tower in the world, in order to make way for a taller skyscraper. The New York Times puzzled over those who would sacrifice the thirteen-year-old structure as ruthlessly as though it were some ancient shack. In New York alone, the Gillender joined the original Grand Central Terminal, the Plaza Hotel, the Western Union Building, and the Tower Building on the list of just one generation's razed metropolitan monuments. In the innovative and

wide ranging Obsolescence Daniel M Abramson investigates this notion of architectural expendability and the logic by which buildings lose their value and utility The idea that the new necessarily outperforms and makes superfluous the old Abramson argues helps people come to terms with modernity and capitalism s fast paced change Obsolescence then gives an unsettling experience purpose and meaning Belief in obsolescence as Abramson shows also profoundly affects architectural design In the 1960s many architects worldwide accepted the inevitability of obsolescence experimenting with flexible modular designs from open plan schools offices labs and museums to vast megastructural frames and indeterminate building complexes Some architects went so far as to embrace obsolescence s liberating promise to cast aside convention and habit envisioning expendable short life buildings that embodied human choice and freedom Others we learn were horrified by the implications of this ephemerality and waste and their resistance eventually set the stage for our turn to sustainability the conservation rather than disposal of resources Abramson s fascinating tour of our idea of obsolescence culminates in an assessment of recent manifestations of sustainability from adaptive reuse and historic preservation to postmodernism and green design which all struggle to comprehend and manage the changes that challenge us on all sides

Mechanisms of Chemical Degradation of Cement-based Systems K.L. Scrivener,J.F. Young,1997-04-17 Deterioration of cement based materials is a continuing problem as it results in the substantial shortening of the lives of conventional concrete structures The main costs result from poor performance and the need for early repair With more advanced applications where very long service lives are essential such as the storage of nuclear waste

Architecture Post Mortem Donald Kunze,David Bertolini,Simone Brott,2016-04-15 Architecture Post Mortem surveys architecture s encounter with death decline and ruination following late capitalism As the world moves closer to an economic abyss that many perceive to be the death of capital contraction and crisis are no longer mere phases of normal market fluctuations but rather the irruption of the unconscious of ideology itself Post mortem is that historical moment wherein architecture s symbolic contract with capital is put on stage naked to all Architecture is not irrelevant to fiscal and political contagion as is commonly believed it is the victim and penetrating analytical agent of the current crisis As the very apparatus for modernity s guilt and unfulfilled drives modernity s debt architecture is that ideological element that functions as a master signifier of its own destruction ordering all other signifiers and modes of signification beneath it It is under these conditions that architecture theory has retreated to an Alamo of history a final desert outpost where history has been asked to transcend itself For architecture s hoped for utopia always involves an apocalypse This timely collection of essays reformulates architecture s relation to modernity via the operational death drive architecture is but a passage between life and death This collection includes essays by Kazi K Ashraf David Bertolini Simone Brott Peggy Deamer Didem Ekici Paul Emmons Donald Kunze Todd McGowan Gevork Hartoonian Nadir Lahiji Erika Naginski and Dennis Maher

This book marks a turning point in architectural theory by using philosophy to examine the field anew. Breaking from the traditional dualism within architecture which presents the body as subject and space as object, it examines how such rigid boundaries can be softened. Zuzana Kovar thus engages with complementary and complex ideas from architecture, philosophy, feminist theory, and other subjects, demonstrating how both bodies and bodily functions relate deeply to architecture. Extending philosopher Julia Kristeva's notion of abjection, the confrontation of one's own corporeality as something is excreted, Kovar finds parallels in the concept of the scaffold. Much like living bodies and their products, can impact on the buildings that house them: old skin cells create dust, menstrual blood stains, our breath heats and cools surfaces, scaffolding is similarly ephemeral and yet not entirely separable from the architecture it supports. Kovar shifts the conversation about abjection towards a more nuanced idea of architecture where living organisms, building matter, space, decay, and waste are all considered as part of a continual process, drawing on the key informing works of thinkers like Gilles Deleuze and Felix Guattari to do this. Including a number of experimental projects conducted in the spaces inhabited by the author herself to illuminate the theory at its core, the book forms a distinguished and pioneering study designed for practitioners and scholars of architecture, philosophy, and visual culture alike. *Building Dynamics* Branko Kolarevic, Vera Parlac, 2015-06-12. Buildings are increasingly dynamic, equipped with sensors, actuators, and controllers; they self-adjust in response to changes in the external and internal environments and patterns of use. *Building Dynamics* asks how this change manifests itself and what it means for architecture as buildings weather, programs change, envelopes adapt, interiors are reconfigured, systems replaced. Contributors including Chuck Hoberman, Robert Kronenburg, David Leatherbarrow, Kas Oosterhuis, Enric Ruiz Geli, and many others explore the changes buildings undergo and the scale and speed at which these occur, examining which changes are necessary, useful, desirable, and possible. The first book to offer a coherent, comprehensive approach to this topic, it draws together arguments previously only available in scattered form. Featuring the latest technologies and design approaches used in contemporary practice, the editors provide numerous examples of cutting-edge work from leading designers and engineering firms working today. An essential text for students taking design studio classes or courses in theory or technology at any level, as well as professionals interested in the latest mechatronic technologies and design techniques. **Margin and Text** Betsy West, Kelly Carlson-Reddig, José L.S.
