Oncogenes and Retroviruses Peter K. Vogt, 2012-12-06 The newest volume in the Current Topics in Microbiology and Immunology series edited by Dr Vogt and dealing with oncogenes and retroviruses contains four review articles by international authorities in the field These articles presenting the latest research results continue the tradition of excellence for which the series is so well known *Retroviruses 4* P.K. Vogt, H. Koprowski, 2012-12-06 Current Topics in Microbiology and Immunology M. Cooper, P. H. Hofschneider, H. Koprowski, F. Melchers, R. Rott, H. G. Schweiger, P. K. Vogt, R. Zinkernagel, 2012-12-06 **Mechanisms in B-Cell Neoplasia** Fritz Melchers, Michael Potter, 2012-12-06 *Ergebnisse Der Mikrobiologie und Immunitätsforschung* Curt Hagedorn, C.M. Rice, 2000 Chronic hepatitis C is a major worldwide health problem affecting more than 170 million people Chronic infections lead to cirrhosis and liver failure or hepatocellular cancer in many instances This volume includes comprehensive reviews that cover much of the vast literature that has appeared since the identification of the hepatitis C virus RNA genome It will be an invaluable collection for anyone wanting an up to date picture of HCV transmission molecular virology immune response cellular molecular pathogenesis and possible avenues for developing effective new therapeutics and vaccines **Retroviral Insertion and Oncogene Activation** Hsing-Jien Kung, Peter K. Vogt, 2012-12-06 An integrated retrovirus effectively becomes part of the cellular genome but with the difference that the virus to a large extent retains control over its own expression through nontranslated sequences in the long terminal repeat L TR Some retroviruses also code for nonstructural proteins that further regulate proviral expression Integration changes the cell genome it adds viral genes and in the case of transducing retroviruses also adds cell derived oncogenes that have been incorporated into the viral genome Integration can also have consequences for cellular genes The transcriptional signals in a provirus can activate expression of neighboring cellular genes the integration even can disrupt and thus inactivate cellular genes These effects of retroviral genomes take place in cis they are referred to as insertional mutagenesis and are the subject of this volume Almost 10 years have passed since W Hayward S Astrin and their colleagues found that in B cell lymphomas of chickens induced by avian leukosis virus transcription of the cellular proto oncogene myc was upregulated through the integration of a complete or partial provirus in its vicinity This landmark discovery suggested a mechanism by which retro viruses that do not carry cellular oncogenes in their genome nonacute retroviruses can cause cancer It contributed the first evidence for the carcinogen potential of oncogenes that are not part of a viral genome

**Retroviruses** Ronald Swanstrom, Peter K. Vogt, 2012-12-06 This book gives a synthesis of current knowledge on retrovirology Each chapter deals with a different step in the virus life cycle detailing the molecular aspects of virus replication The comparison of different retroviruses exemplifies variations Specific topics include the evolution of retrovirus genomes integration of the provirus viral DNA transcriptional and translational control of viral gene expression processing of viral proteins and packaging of virion RNA Data on HIV and HTLV 1 are covered as well as research on animal retrovirus systems

**National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1985 **Retroviruses** John M. Coffin,Stephen H. Hughes,Harold Varmus,1997 For over 25 years the study of retroviruses has underpinned much of what is known about information transfer in cells and the genetic and biochemical mechanisms that underlie cell growth and cancer induction Emergent diseases such as AIDS and adult T cell lymphoma have widened even further the community of investigators directly concerned with retroviruses a development that has highlighted the need for an integrated understanding of their biology and their unique association with host genomes This remarkable volume satisfies that need Written by a group of the field s most distinguished investigators rigorously edited to provide a seamless narrative and elegantly designed for clarity and readability this book is an instant classic that demands attention from scientists and physicians studying retroviruses and the disorders in which they play a role

**Published Scientific Papers of the National Institutes of Health** National Institutes of Health (U.S.),1990 **Oncogenes** Peter K. Vogt,2012-12-06 Once again the Current Topics in Microbiology and Immunology series presents a volume with up to date review articles on oncogenes The well known authority and editor of previous volumes in the series Dr Vogt has accepted five contributions which critically evaluate recent research in the field

**Current Catalog** National Library of Medicine (U.S.),1993 First multi year cumulation covers six years 1965 70

**Mechanisms in B-Cell Neoplasia 1990** Michael Potter,Fritz Melchers,2013-03-12 The eighth workshop in this series on Mechanisms in B Cell Neoplasia 1990 was held in Wilson Hall at the National Institutes of Health Bethesda Maryland on March 28 30 Five major topics formed the basis for the discussions 1 progress in experimental models of B cell tumorigenesis 2 the role of IL 6 in plasma cell tumor formation with particular emphasis on human myeloma 3 immortaliza tion and regulation of mitosis in B cells 4 the mYQ gene in B cell neoplasia and 5 the role of EBV and other oncogenes in transforma tion of human B lymphocytes A meeting on the Epidemiology of Myeloma was held at the N I H on the preceding day and many of those interested in the clinical aspects of myeloma were also participants at the workshop

**Experimental Models of B Cell Tumor Development** We have seen in the last eight years the steady growth of model experimental systems many of which have been designed to be counter parts of the major forms of human B cell tumors e g follicular lymphomas Burkitt s lymphomas acute B cell leukemia and multiple myeloma A variety of novel ways of inducing these tumors has been described Advantage has been taken of the experiments in nature to identify critical genes that play a role in tumor pathogenesis These genes have been identified by being near to viral insertion and chromosomal translocation sites or by having been incorporated or transduced into a defective transforming retrovirus

**Retroviruses 3** P.K. Vogt,H. Koprowski,2012-12-06 **Transacting Functions of Human Retroviruses** Irvin S.Y. Chen,Hilary Koprowski,A. Srinivasan,P.K. Vogt,2012-12-06 The coding domains of simple retrovirus genomes direct the synthesis of virion proteins Complex retroviral genomes generate in addition to virion proteins regulatory transacting proteins that are translated from multiple spliced messenger RNAs and fulfill important functions in the virus life cycle All

human retroviruses have such complex genomes The transacting proteins of these pathogens are attractive targets for therapeutic intervention because they are viral specific are essential for efficient virus replication and may be mediators of viral pathogenicity In summarizing the current knowledge on the regulatory transacting proteins of human retroviruses this volume makes an important contribution toward the control of virus disease Oncogenes in B-Cell Neoplasia M. Potter, F. Melchers, M. Weigert, 2012-12-06 Mechanisms in B-Cell Neoplasia 1988 Michael Potter, Fritz Melchers, 2013-03-07 The papers in this book were presented at the 6th Workshop on Mechanisms in B Cell Neoplasia held in Bethesda March 23 25 1988 On alternate years this meeting is sponsored by the Basel Institute of Immunology in Basel Switzerland and by the National Cancer Institute in Bethesda and is attended by 100 to 150 participants This 6th workshop like the preceding five was characterized by intense and enthusiastic discussion which reflects we think the exciting growth and development of this field It is quite clear however that despite many general advances an understanding of the precise underlying mechanisms in B cell tumor development is not yet defined Probably there is no single mechanism for all the various forms of B cell neoplastic development Many different forms of B cell neoplasms are known and these are distinguished by several characteristics 1 the stage of development attained by the tumor stem cells 2 mode of growth slow or fast 3 association with natural or inductive etiologic agents and 4 specific and consistent mutational mechanisms such as retroviral insertion chromosomal rearrangement Those characteristic forms which arise naturally in relatively high frequency or those tumors with hallmark properties which can be induced consistently are the models most frequently studied e g endemic Burkitt's lymphoma follicular lymphoma acute and chronic lymphocytic leukemia and multiple myeloma in man bursal lymphoma in chickens Abelson virus induced pre B cell lymphomas and plasmacytomas in mice and immunocytomas in rats Each model system has special problems and advantages

**The Role of Viruses and the Immune System in Diabetes Mellitus** Thomas Dyrberg, 2013-06-29 Research in diabetes has accelerated in two areas both of which are being reviewed in CTMI The first is the use of a variety of animal models the second is basic research in human investigation islet cell antigens and mapping of genes associated with susceptibility to disease Dr Thomas Dyrberg accepted editorial responsibility for this volume which covers the first area A second book to be published later in the year is edited by Drs Brekkeskov and Hansen CTMI 164 see page VI for contents Although the contributors to both volumes represent the international scientific community the editors are from the Hagedorn Research Laboratory in Denmark Work at this institute and the Steno Memorial Hospital has been dedicated to research in diabetes for decades and the institutions were appointed WHO Collaborating Centres for Research and Training on the Pathogenesis of Diabetes Mellitus in 1983 It is worth noting that while addressing the hypothesis of the role of class II major histocompatibility glycoproteins in autoimmune diabetes insulin dependent diabetes IDDM a number of investigators established animal models in which class II molecules were expressed under the control of the rat insulin promoter While generating interesting information on IDDM the finding of immunologic

tolerance in such transgenic mice has attracted the attention of several basic immunologic laboratories for quite different reasons. Thus we are reminded again of the Pasteur dictum that chance favors the prepared mind. Michael B A Oldstone M D

Immunological Memory David Gray, Jonathan Sprent, 2013-03-07 Although immunologists know rather a lot about the manifestation of immunological memory, an understanding of the mechanism of memory at cellular and biochemical levels eludes us. Indeed as we shall see it is not even clear which of the several models used to explain the working of memory approximates to the truth. It is in order to report on approaches to this problem and on recent experimental advances in the field of memory cells that this volume has been put together. In the past 4-5 years cell surface molecules that may enable us to define memory B and T cells have been identified. It may now be possible to ask how memory cells are generated and to define what signals are required during or after antigenic encounter for a cell to enter the memory cell pool rather than to terminally differentiate into an effector cell. The transition from virgin cell to memory cell is clearly accompanied by several biochemical changes. For B cells isotype switching and somatic mutations leading to affinity maturation are well defined phenomena although the molecular mechanisms remain mysterious. Both have received attention in many excellent reviews of late and so are not considered in detail in this book. Neither switching nor somatic mutation is a feature of peripheral T cell maturation. Biochemical differences between virgin and memory T cells may only relate to differing activation requirements and possibly changes in the expression of accessory molecules. *Revue Roumaine de Médecine*, 1984
