Reading Japan Cool John E. Ingulsrud, Kate Allen, 2010-02-03 Japanese animation video games and manga have attracted fans around the world. The characters, the stories, and the sensibilities that come out of these cultural products are together called Japan Cool. This is not a sudden fad but is rooted in manga, Japanese comics, which since the mid 1940s have developed in an exponential way. In spite of a gradual decline in readership, manga still commands over a third of the publishing output. The volume of manga works that is being produced and has been through history is enormous. There are manga publications that attract readers of all ages and genders. The diversity in content attracts readers well into adulthood. Surveys on reading practices have found that almost all Japanese people read manga or have done so at some point in their lives. The skills of reading manga are learned by readers themselves but learned in the context of other readers and in tandem with school learning. Manga reading practices are sustained by the practices of other readers and manga content therefore serves as a topic of conversation for both families and friends. Moreover, manga is one of the largest sources of content for media production in film, television, and video games. Manga literacy, the practices of the readers, the diversity of titles, and the sheer number of works provide the basis for the movement recognized as Japan Cool. Reading Japan Cool is directed at an audience of students of Japanese studies, discourse analysts, educators, parents, and manga readers.

### **The Psychology of Reading**

Insup Taylor, M. Martin Taylor, 2013-09-17 The Psychology of Reading provides a fair and coherent overall picture of how reading is done and how it is best taught. It aims to relate reading to writing systems, analyze the process of reading from several viewpoints using research from diverse disciplines, and develop a model of reading to explain reading processes, all the way from letter recognition to reading whole texts. The book describes how children learn to read in different scripts by different methods and at different ages. It discusses different components of reading: eye movements, letter and word recognition, sentence and prose reading, and so on in beginning readers, in skilled or unskilled readers, as well as dyslexic readers. Brain-damaged patients with selective impairment of different components provide a natural laboratory to compare reading processes within one script as well as across different scripts. The more types of readers, scripts, and components examined, the better the picture of reading processes drawn. This book is a text for college students as well as a reference book for professionals in psychology, education, linguistics, and other related fields.
