Read the text and answer the questions.

Bronze

1 Bronze is a metal that has been used by humans for thousands of years. It is
2 made by mixing copper with a small amount of tin. The result is a strong and
3 durable metal that is used for many different things. Bronze is much harder
4 than copper, which is why it is a popular choice for making tools, weapons,
5 and statues. It is also used in coins and musical instruments, like cymbals,
6 because of its special sound. The process of making bronze was discovered
7 long ago, during the Bronze Age. This time period started around 3300 BCE
8 and lasted until about 1200 BCE. People in many ancient cultures, including
9 the Egyptians, Greeks, and Chinese, used bronze to create things that were
10 useful in their daily lives. For example, they made tools like axes and knives,
11 as well as armor for soldiers. One of the reasons bronze was so important
12 during the Bronze Age is that it was much stronger than other materials
13 available at the time. It helped people build better tools and weapons, which
14 made life easier and safer. The use of bronze also helped people create
15 beautiful artwork, like sculptures and jewelry. Some of the most famous
16 ancient statues are made of bronze. Today, bronze is still used in many
17 areas. It is often found in machinery and equipment that need to resist wear
18 and tear, like gears and bearings. It is also used in making medals, including
19 Olympic gold medals, which are actually made of mostly bronze with a thin
20 layer of gold. Bronze is a mixture of metals, so it can be made in different
21 ways, depending on how much tin is added to the copper. Some types of
22 bronze are very strong and resistant to corrosion, making them ideal for use
23 in outdoor structures, like statues or fountains. Because of its long history
24 and usefulness, bronze remains one of the most important metals in the
25 world.
